

DULLES SUBURBAN CENTER

BACKGROUND

Location

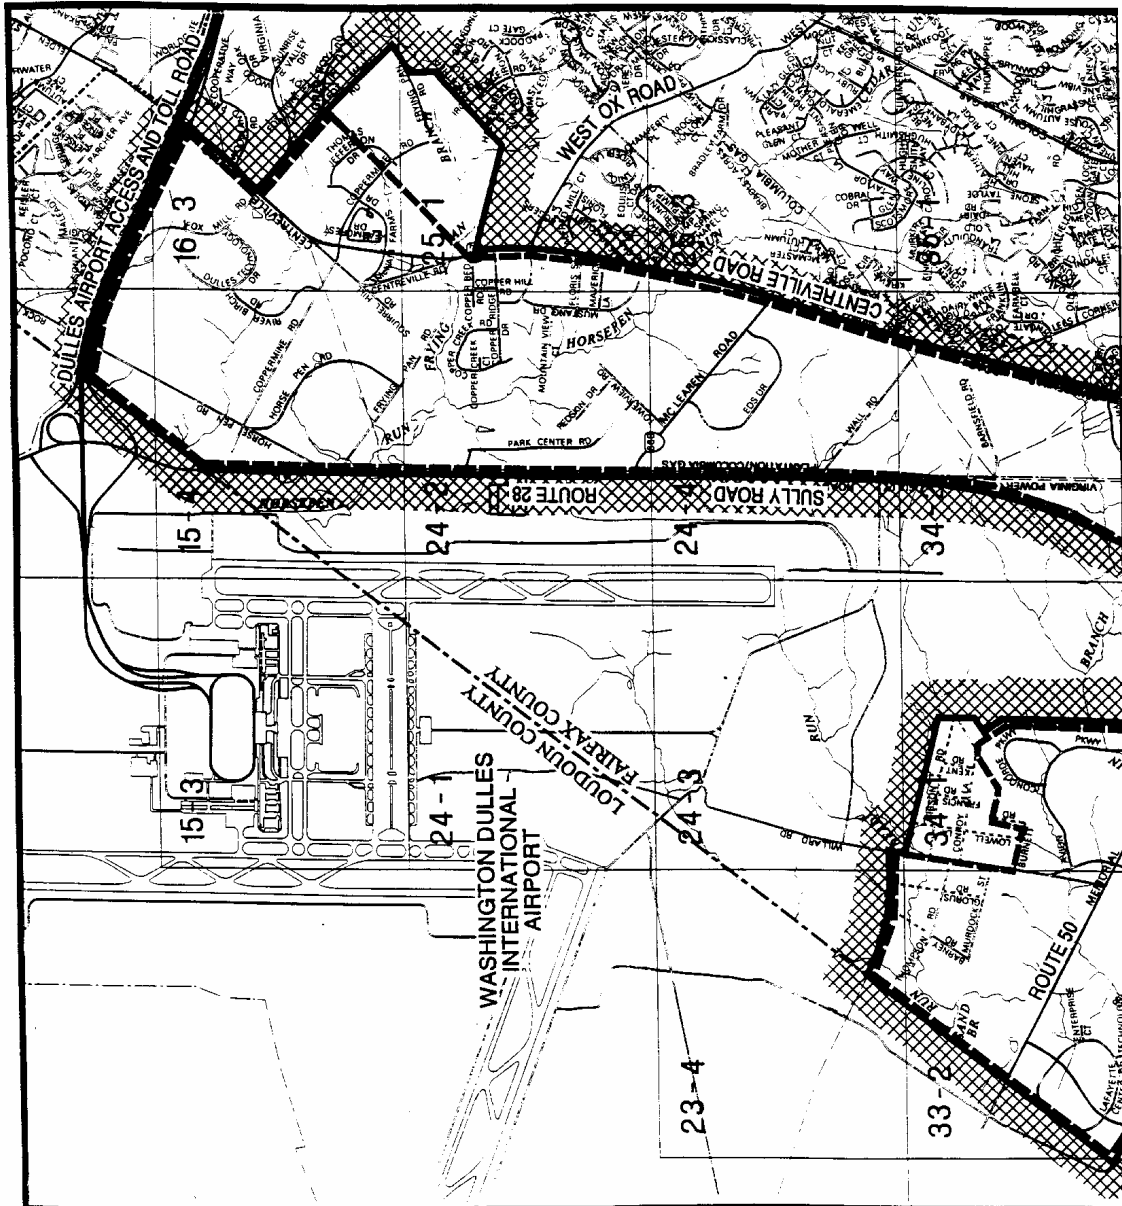

The Dulles Suburban Center is located in western Fairfax County, adjacent to the eastern and southern boundaries of the Washington Dulles International Airport (referred to hereafter as "Dulles Airport"). The Dulles Suburban Center extends from the Dulles Airport Access and Toll Road (DAAR) on the north to I-66 on the south (see Figure 1). The southwestern edge of the Suburban Center is contiguous with Loudoun County. With the exception of a small part of the Reston-Herndon Suburban Center at the northeast corner, the Dulles Suburban Center is bordered to the north, south and east by residential neighborhoods. Major highways traversing the Center north and south are Route 28, Centreville and Walney Roads. Route 50 bisects the area from east to west.

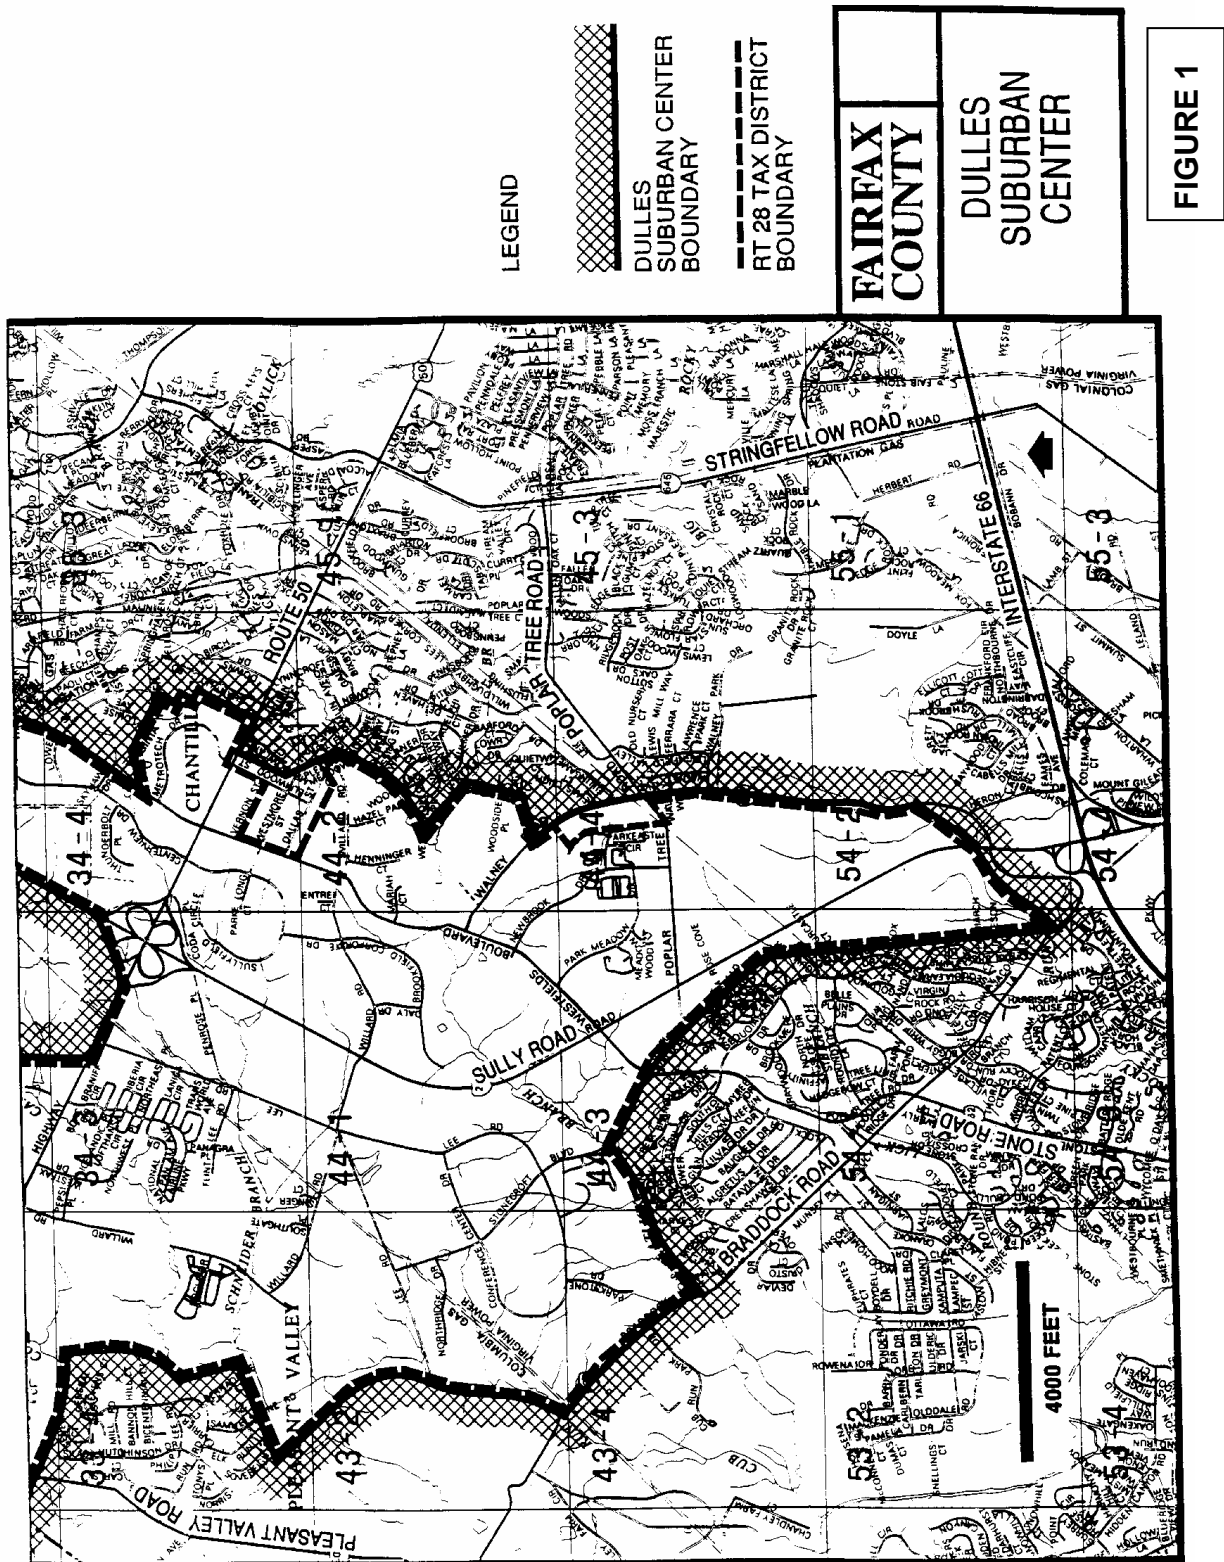

For planning purposes, the Suburban Center has been divided into land units, found on Figure 2.

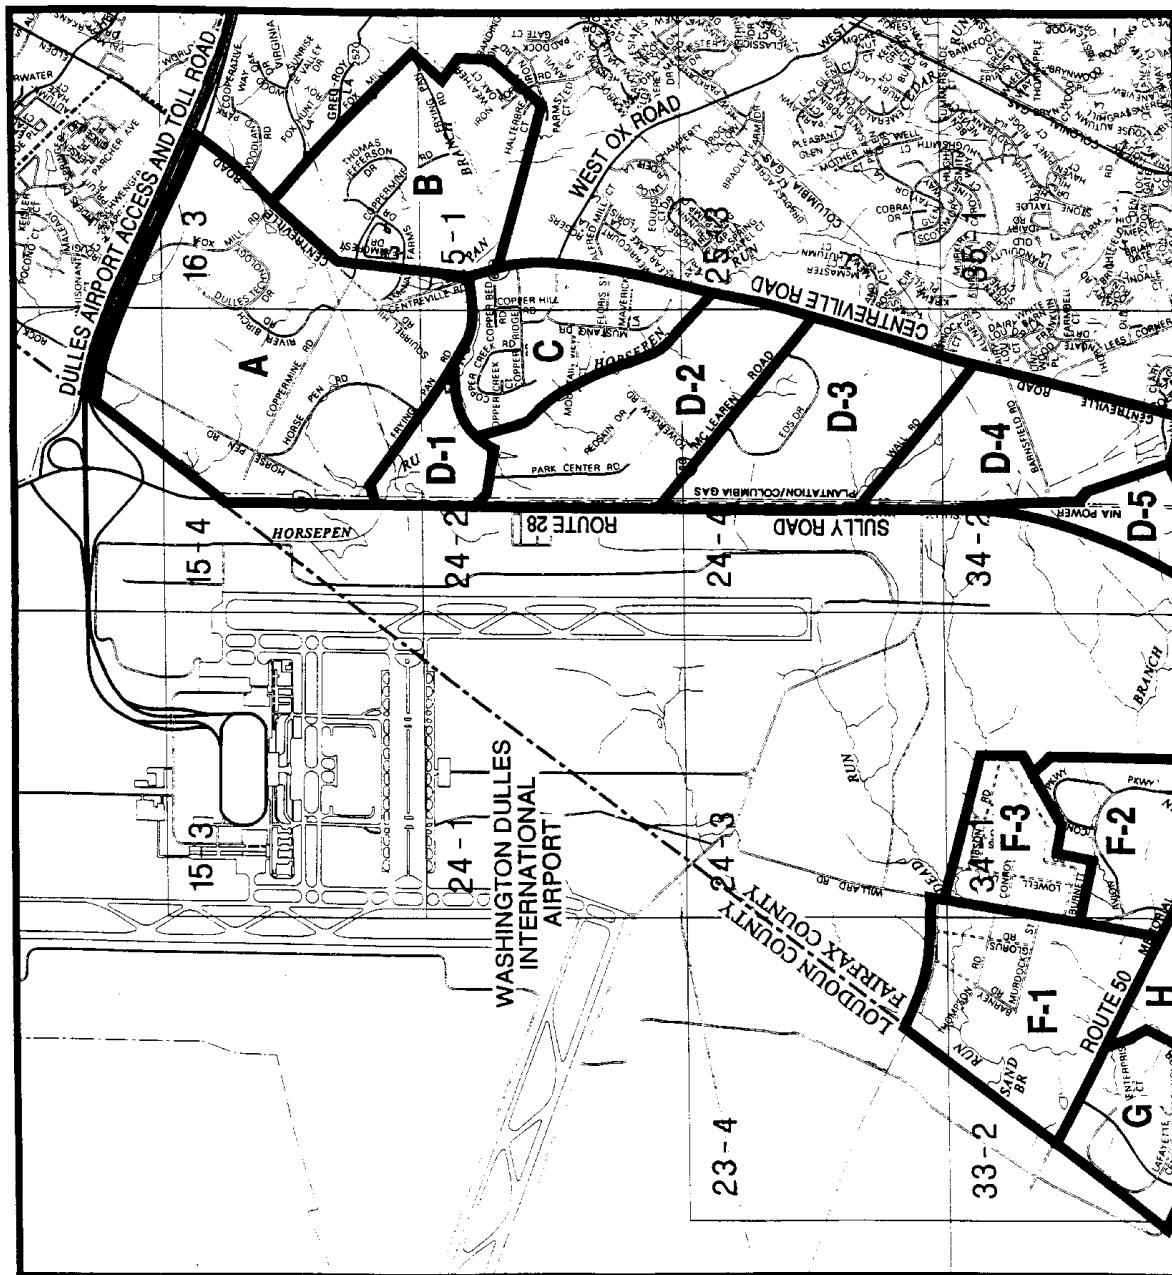

Route 28 Tax District

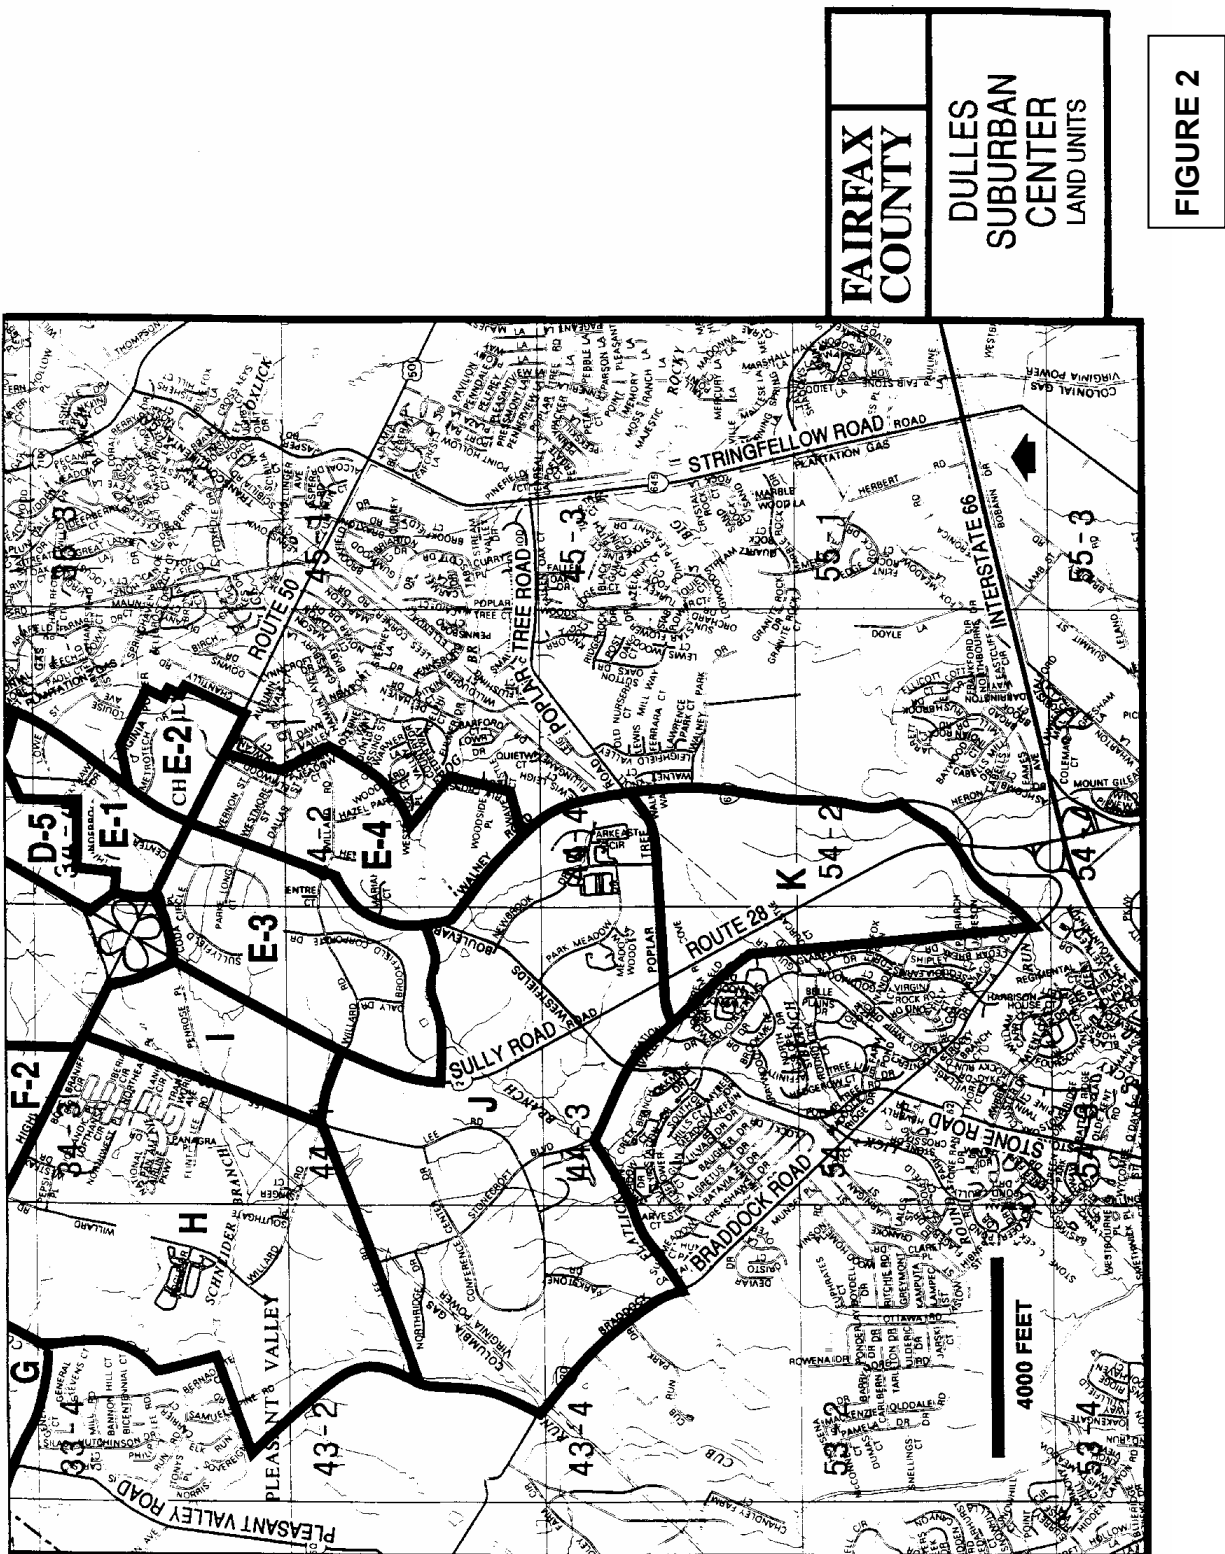

The boundary of the Dulles Suburban Center corresponds closely to that of the Route 28 Tax District; however, the Rockland Village subdivision (discussed later in Land Unit E-4), the Police Training Center (Land Unit F-3), and the eastern part of McNair Farms (Land Unit B), all of which are within the Suburban Center, are outside the Tax District. The Tax District was established by Virginia statute in December 1987 for both Fairfax and Loudoun Counties to provide for extensive private sector participation in paying for road improvements needed to serve airport-related economic development. The Tax District was established in response to concern about the large amount of anticipated development in the Route 28 corridor and the inadequacy of public funds to provide for the necessary major road improvements. The identified improvements are to occur in two multi-year phases; the current Tax District legislation provides funds for the first phase of improvements. In Fairfax County, Tax District funds have been used to widen Route 28 from two to six lanes and provide grade-separated interchanges at Route 50 and the DAAR. These improvements do not include widening other roads unless the widening is related to improving an interchange. Neither does the current funding provide for the full implementation of approved Virginia Department of Transportation (VDOT) plans for Route 28 expansion, such as the building of additional grade separated interchanges. Until the year 2005, the zoning district provisions that were in effect prior to December 1989, are in effect in the Route 28 Tax District. If the Tax District legislation is not reenacted to provide for the Phase II transportation improvements or otherwise amended, then the zoning in this area will come under the County's Zoning Ordinance current at the time.

The legislation established a procedure whereby the state would borrow funds for specific transportation improvements in the Tax District and the landowners would pay a special tax to cover the majority of the costs associated with the construction and financing of these improvements. The special tax is levied on all commercial and industrial land in the district and is based on the land's assessed fair market value. The tax rate cannot exceed 20 cents per 100 dollars of assessed value. The Tax District's obligation covers 80 percent of the cost of the transportation improvements. The remaining 20 percent and any shortfall is to be provided from State transportation funds.

Land Use

The Dulles Suburban Center is approximately 6,340 acres in size. Approximately 1,820 acres, or 29 percent of the land, was developed as of January 1992. There are 1,100 acres, 17 percent, in public ownership.

Existing development is auto-dependent and scattered throughout the Dulles Suburban Center. The greatest concentrations appear along the eastern side of the Route 28 Corridor (Dulles Corner offices at the Dulles Airport Access and Toll Road; Electronic Data Systems (EDS) and the Renaissance Ramada Park at McLearen Road). At the intersection of Routes 50 and 28, the majority of development is located on the southern side of Route 50 and extends east and west of Route 28. Of the existing development, the great majority is in the combined categories of office and industrial use. In fact, much of the industrial development is developed in combination as industrial/flex use. As of January 1992, industrial, office and industrial/flex uses comprised 1,300 acres, 71 percent of total developed acres and 14.2 million total gross square feet of development. Major developments include Dulles Corner, Westfields, Lafayette Business Park, Sullyfield Business Park, EDS, Dulles Technology Park, and Avion.

Major public facilities include the County public safety facility to be located on 110 acres next to the southern and western boundary of Dulles Airport; Ellanor C. Lawrence Park, a natural preserve located along Route 28 north of Centreville and I-66; and the Sully historic site, located north of Route 50 along Route 28 adjacent to Dulles Airport. Other public facilities include the Floris Elementary School near the intersection of Centreville and West Ox Roads; a fire and rescue center in the same location and another on Walney Road just south of Route 50. Two former sewage treatment plants have been converted to other uses: Flatlick Treatment Plant is used as open space and a plant nursery operated by the Fairfax County Park Authority, and Cub Run Treatment Plant is used by the Department of Public Works. Some public parkland associated with Environmental Quality Corridors (EQCs) has been dedicated in various locations throughout the Suburban Center, notably, in the Cub Run area south of Route 50 and surrounding the residential development in Floris.

Retail uses include the Sully Place, Sully Plaza and Sully Square shopping centers, community-serving facilities, located at the intersection of Centreville Road and Route 50. The Village Center at Dulles, in the McNair Farms planned development on Centreville Road near the DAAR, also contains a community-serving shopping center.

Copper Crossing, Kings Grant, Mountain View and Rogers Farm are single-family subdivisions developed with one-half and one acre lots in Floris (Land Unit C). Multi-family and townhouse residential units are located in Land Unit B and portions of Land Unit A.

A major factor in planning for the Dulles Suburban Center is the amount of land already zoned for higher intensity, non-residential development. Approximately 4,800 acres or 76 percent of the study area is zoned for industrial and commercial uses. The remainder is zoned for residential and public facilities uses.

Planning History

Land in proximity to the Dulles Airport in Fairfax County has been planned for employment or industrial use since the Airport was envisioned in the late 1950s. Planning for the land adjacent to the Airport has been influenced primarily by the economic benefit of the direct relationship to the Airport, the excellent regional access and access potential and by the fact that residential uses are not

appropriate in areas impacted by aircraft noise. The configuration of the planned Dulles employment and industrial area has shifted over the years in response to changing aircraft noise contour projections; major planning elements, such as the "outer beltway" planned in 1970 as a north-south facility between Route 28 and Route 123; and changing needs projections for the type and extent of employment uses related to the Airport.

The late 1960s and early 1970s were a period of rapid development growth countywide. Up to 14,000 new residents were moving to the County each year and the western County was largely rural. In 1970, the first comprehensive plans for the Bull Run and Upper Potomac planning districts were adopted or adopted in principle. There was an emphasis in these plans on the potential for major employment opportunities, partly to help offset the cost of public facilities for residential development and because of federal government master planning to expand the airport facility and operations. Expanded aircraft noise contours had recently been developed by the Federal Aviation Administration (FAA), which included future supersonic transport (SST) operations. The new contour extended to an "outer beltway", planned in 1970 as a north-south cross-county highway following an alignment between Lees Corner Road and Stringfellow Road and joining the present Fairfax County Parkway alignment north of Franklin Farm which was included in the Bull Run and Upper Potomac plans. Residential use was determined to be not appropriate within noise impacted areas and expansion of the Dulles employment area eastward into this area was deemed to be appropriate.

In 1975, as a result of the PLUS program, the airport-oriented industrial use pattern was modified once again. The extensive non-residential area planned north of Route 50 was reduced to an area generally west of Centreville Road. In the 1975 Plan, the non-residential use planned south of Route 50, extended east of Route 28 to the Brookfield subdivision and south of Flatlick Run to Ellanor C. Lawrence Park. The "outer beltway" was removed from the Plan at this time.

The 1975 PLUS Plan recommendations for most of the Dulles Suburban Center were contained in a section of the Area III Plan called Areas Related to Dulles Airport and Access Road, which was divided into a northern sector and southern sector. The dividing line for these two sectors was Horse Pen Run. The uses planned for the northern sector were showplace development, including corporate headquarters, hotels, motels, convention centers and office buildings. Ancillary commercial services serving the primary employment uses were envisioned as part of the northern sector as well. In the southern sector more traditional industrial uses were planned, including light manufacturing, freight distribution facilities, warehousing, and office use. A golf course was planned in the southern sector to serve employees in the area and provide an open space amenity which would help to protect the Sully historic site. A variety of general policies were adopted in conjunction with these uses pertaining to: compatibility of industrial use with residential use; restriction of residential development in noise impacted areas; coordination among developments; circulation and access; addition of major public facilities, including use of the Dulles Airport Access Road (DAAR) for commuter traffic; and expansion of sewer capacity.

In 1982, in order to implement the Occoquan Basin Study recommendations, the County rezoned some land within the planned Dulles employment area from residential to an industrial zoning district where these uses were proposed in the Occoquan Basin study. This created a complete pattern of non-residential zoning for the Dulles employment area in the Occoquan Basin (the area south of Horse Pen Run).

Update of the Comprehensive Plan

On February 25, 1991, the Board of Supervisors authorized a study of the Route 28 Tax District to result in recommended changes to the Comprehensive Plan. For the Route 28 Tax District Study, the Board of Supervisors appointed a 21-member task force composed of major landowners, representatives of businesses, the Town of Herndon, the Fairfax County Planning Commission, and citizen organizations. The Task Force and County staff worked together for over one year to identify planning issues and objectives and develop land use and transportation recommendations that would serve as the basis for a 20-year Plan. The following Plan text is largely a result of that effort.

CONCEPT FOR FUTURE DEVELOPMENT

The Dulles Suburban Center offers an opportunity and challenge to create a high quality, well conceived, integrated, and functional multiple use employment and residential sector. Vision, creativity, reason, and public-private cooperation can be rewarded by fashioning a model community characterized by an exemplary quality of life featuring an optimal mix of employment, housing, environmental protection, transportation service, and other services, all while significantly enhancing the tax base.

Dulles Airport, a major economic catalyst for the Northern Virginia area, is adjacent to the Dulles Suburban Center. Future development within the Suburban Center will benefit from the proximity of the Airport and emphasize national and international business and commercial endeavors; tourism and visitor services; major recreation and entertainment features; mixed commercial and residential areas in urban settings with compatible facilities and amenities; and industrial service areas required to support the Dulles Airport and suburban area, and the metropolitan region. A variety of housing outside the airport noise contours in the Dulles Suburban Center and adjacent Planning Districts will serve this Center. A mixed-use core urban area is planned adjacent to the Dulles Airport Access Road, with uses similar to but more intense than other parts of the Center. This higher intensity core is envisioned to be served by a rapid rail transit system. A second node of mixed-use development is planned in the Westfields area to create a focal point for residents and employees.

The planned roadway system recognizes Route 28 as a major arterial, designed to facilitate through traffic and limit direct access onto Route 28 at major intersections. Travel within the Dulles Suburban Center is envisioned to be served by interconnecting roadways and transit that will link major development areas within the Center and provide connections to regional transit systems, planned to include rail, along the DAAR and I-66. Parking facilities would be planned near these transit and development nodes and increased transit ridership would be encouraged by limiting parking in those areas planned for the highest intensity development.

PLANNING ISSUES

To achieve the Concept for Future Development for the Dulles Suburban Center, a number of significant planning issues must be addressed. Identified issues include an imbalance between zoned development potential and transportation capacity; preserving the opportunity for alternative transportation modes, including rail; integrating residential development into the Center; providing for a broader range of uses and for uses that are compatible with surrounding residential neighborhoods; and accommodating the future growth of Dulles Airport and the proposed Annex to the Air and Space Museum. These issues are outlined below.

Development Potential and Transportation Imbalance

A central issue affecting planning in the Dulles Suburban Center is the imbalance between the zoned development potential of the area and the capacity of the 1991 Countywide Transportation Plan. Of the roughly 6,300 acres that make up the Suburban Center, approximately 4,800 acres are zoned for commercial or industrial development. As of January 1992, existing non-residential development totaled approximately 15 million square feet of space. It is estimated that the planned roadway improvements for the area, which include 33 (one-way) lanes of road capacity, can accommodate a development level of approximately 34 million square feet and still maintain acceptable levels of service on the roadways in the area (Level of Service D/E as estimated by the Office of Transportation).

The estimated maximum amount of non-residential development that could occur, given "stable" development, proffered intensities, and by-right zoning, is over 140 million gross square feet of space. Because land is already developed at densities of one-third to one-half the allowable zoning, it is unlikely that all parcels would develop or redevelop to the maximum zoning envelope. However, the likely amount of development to occur in the Route 28 area is well beyond any level that could be accommodated by the currently adopted 1991 Countywide Transportation Plan. This makes it essential to evaluate and plan for transportation alternatives including rail, bus transit systems, transportation demand management systems, and HOV-lanes, among others.

Given the existing development level of 15 million square feet, if approximately one million square feet of new space were built and occupied each year on average, the capacity of the planned road system will be adequate for the next 10-15 years based upon construction of the planned system. Therefore, the imbalance between land use and transportation will not be perceived by residents or workers in the area until there is considerably more development. However, the potential transportation demand suggests that methods and techniques for reducing impacts on the road system should be of the highest priority. It is reasonable to expect that expanded transit and other transportation alternatives, such as transportation demand strategies, must contribute significantly to meeting this demand. Land use strategies should also be directed at this issue. Such strategies include planning for uses which generate fewer peak-hour trips than office development, discouraging land use sprawl, and encouraging higher intensity multi-use "nodes of development" that are better served by transit and transit-friendly project planning.

Preservation of Options for Rail and Other Transit

The long-term imbalance between the currently planned roadway network and the transportation needs of the Dulles Suburban Center may require integration of a rail transit system. A critical planning element is the identification and reservation of rights-of-way to assure internal access, and interface with other systems. Other options include providing greater and more frequent bus service to and from the area; shuttle bus service between different nodes of development within and outside the Route 28 area; greater use of transportation demand management strategies; a transportation management association; and rail.

The development of the mixed-use nodes must also take into account the need to provide public transportation transfer facilities. Such facilities would provide locations for the transfer of passengers to and from various transportation modes, as for example, between automobiles and buses, carpools, or rail vehicles, or between pedestrians and multiple high-occupancy vehicle options. Specific locations of these points of transfer will also need to be identified as soon as possible in order that sufficient areas can be reserved and/or accommodated in the development process.

Integration of Residential Development

One of the principal goals outlined in the Policy Plan is to expand housing opportunities in or near employment centers as a way to minimize the impacts of commuters on County roads and to make public transit more feasible as a transportation alternative. Planning for a mixture of residential and non-residential uses in the County's employment centers should also aid in expanding the opportunity for affordable housing and higher density residential development in areas that can be served by transit and can offer access to retail and other services. In each of the Suburban Centers identified on the County's Concept for Future Development Map, residential uses have been planned where there have been opportunities for residential development as evidenced by vacant land suitable for residential and mixed-use development and public facilities. In the Dulles Suburban Center there is also vacant land available and a desire for mixed-use and residential development. However, there are constraints on planning for residential uses due to airport noise impacts, the current structure of the Route 28 Tax District, and compatibility of residential uses with existing and planned industrial uses.

Residential development is currently constrained by the structure of the Route 28 Tax District legislation. While the current Tax District enabling legislation would not preclude residential development, it excludes residentially zoned or developed land from Tax District payments. Rezoning commercial or industrial property to a residential zoning category would have the affect of removing this rezoned property from the Tax District. The tax burden on other landowners of the Tax District, the County and the public would increase, thereby posing a threat to the ability of the district to generate revenues sufficient to repay the roadway improvement bonds. Given this situation, an option for residential use is only planned in this area with the stipulation that no rezoning to a residential category shall occur until a mechanism is established by the County or the Tax District legislation is amended to allow for contributions from residential development to permit residential development without increasing the financial burden on other tax district landowners or the County without their consent. Residential development should be encouraged in commercially zoned mixed-use developments where there would be no tax loss from inclusion of the residential component.

In planning for residential uses, consideration must also be given to providing for a quality living environment in an area that will primarily be developed in non-residential uses and where access will be limited. Residential developments will need to provide for recreational and other amenities on-site and be adequately screened and buffered to mitigate noise, light and other nuisances generated by non-residential uses. Further, development will need to be designed so that traffic associated with non-residential uses, including trucks, will not, in general, be traveling through residential neighborhoods. One exception may be where higher-intensity residential uses are planned as part of a mixed-use project.

Compatibility with Existing Neighborhoods

Given the scale and amount of development that could potentially occur in the Dulles Suburban Center, it is important that this development not negatively impact the surrounding residential communities. The majority of the existing communities adjacent to the Dulles Suburban Center are of a low density residential nature comprised almost exclusively of single-family detached homes. In most cases, these communities are separated from the Dulles Suburban Center by major roadways, public parkland or environmental features such as stream valleys. However, it is important that adequate screening and buffering and access design measures be incorporated into new development to mitigate any adverse impacts from noise, headlight glare, and cut-through traffic on existing residential development. Two residential subdivisions within the Dulles Suburban

Center, Rockland Village (Land Unit E-4) and Dulles Meadows Mobile Home Park (Land Unit H), should also be protected through compatible development and/or design treatment on adjacent land.

Accommodating a Broader Range of Uses

The Dulles Suburban Center is of sufficient land area and diverse enough in character to accommodate a broad range of uses. There is still a considerable amount of vacant land located throughout the area that can serve as a resource for future development of a variety of uses. An issue to be addressed in this Plan is the manner in which these different types of uses are integrated with existing and proposed development. The flexibility to accommodate a broad range of land uses must be implemented in such a way as to ensure high quality, compatible development in the area.

Future Growth of Dulles Airport

Growth of Washington Dulles International Airport is a major factor affecting planning for the Dulles Suburban Center and the quality of life in western Fairfax County. The Airport serves as a regional economic focal point. It is one of the region's major employers. Passenger service and cargo operations are major contributors to the region's economic well being.

Planning must accommodate the potential increase in Airport operations. The Airport Master Plan calls for five runways (two additions) which, on completion will permit a three-fold increase in flight operations, to 750,000 flights per year. However, construction schedules depend on many factors, not yet fully resolved.

While airport employment may be expected to increase, and additional growth may be induced by the international character of the airport, fundamental estimates of future employment, commercial office facilities, and industrial services are uncertain. Factors that may influence the rate of growth within the next twenty to fifty years include changes in aviation technology, level of investment needed, and changes in land use in the region.

Airport operations present constraints to development in terms of allowable building heights within flight paths and noise impacts. Policies related to building heights may be found in the Area III Plan Overview in the section "Allowable Height of Structures in the Vicinity of Dulles Airport." To provide for a healthy living environment, Fairfax County has adopted a policy which states that new residential development should not occur in areas with projected aircraft noise exceeding DNL 60 dBA. Fairfax County has also established an "Airport Noise Impact Overlay District" (ANIOD) around Dulles Airport. Location of noise contours around Dulles Airport is calculated by a computer model of airport operations. Specific variables are:

- Aircraft type, which include noise emanation patterns.
- Aircraft operating sequences which include arrival/departure patterns and frequency of operation.
- Time of day, and a weighting function that adjusts for day or night operations.

The ANIOD boundaries shown on the 1986 and 1992 Comprehensive Plan map were adopted for planning purposes in 1983. These boundaries were based on data related to "Stage 2" aircraft, which generate relatively high noise levels, and on estimates of future flight operations that were developed in the late 1970s. Because of federal legislation requiring U.S. airlines to phase in a new generation of quieter aircraft ("Stage 3" aircraft), and because of changes in projected future aviation operations at Dulles Airport, in 1993 the Metropolitan Washington Airports Authority revised its

noise contour projections for the area around Dulles Airport. The updated noise contour lines are substantially smaller in geographic extent than the corresponding contours shown on the 1986 and 1992 Comprehensive Plan map. Plan policy recommends that new residential development not be located in areas with projected aircraft noise exposures exceeding DNL 60 dBA. Where new residential development does occur near Washington Dulles International Airport, disclosure measures should be provided.

Location of the Smithsonian Air and Space Museum Annex

Dulles Airport has been selected by the United States Congress as the future location of the Annex of the Smithsonian Air and Space Museum. A facility of this nature would be a significant regional, as well as national, tourist attraction that could help to shape future land use and development in this area. This facility could provide the impetus for additional motel/hotel growth in the area, as well as other cultural uses that might be associated with the Museum Annex or developed around the theme of flight and space travel. Such a facility must be accommodated by a planned transportation system and support the Airport's master plan for improved access. At the same time, it may provide additional justification for public transit in the Route 28 Corridor. The desirability of this location in the Route 28 Corridor for uses of this type has been clearly demonstrated. Therefore, this type of tourist use should be strongly encouraged in the Dulles Suburban Center in conjunction with tourist related facilities, including the appropriate retail, transportation, and hotel facilities to deal with them.

MAJOR OBJECTIVES

The following are the major objectives for planning in the Dulles Suburban Center.

Land Use

1. Promote a high quality of life for those who work and reside in or proximate to the Dulles Suburban Center.
2. Support development that emphasizes local, national and international business and commercial endeavors; tourism and visitor services; major recreation and entertainment features; mixed commercial and residential areas in urban settings with compatible facilities and amenities; and industrial service areas required to support the Dulles Airport and the surrounding area.
3. Support developments at major employment sites that incorporate retail facilities, day care services, and cultural facilities, with amenities complementing a Suburban Center setting.
4. Minimize undesirable visual, auditory, and environmental impacts.
5. Encourage a variety of housing opportunities within and near the Dulles Suburban Center.
6. Provide a balance of land uses, protect environmental and heritage resources, and provide public facilities and transportation services.

7. Assure that planned residential uses at the periphery of the Tax District are compatible in density with the established residential communities.
8. Provide flexibility for economic enterprises attracted to the Dulles Airport area.
9. Encourage project planning that emphasizes transit-friendly design.
10. Provide affordable housing as part of all future residential development and encourage a variety of housing types and prices.

Transportation

11. Promulgate a comprehensive transportation program that serves local travel needs within the Dulles Suburban Center and interconnects effectively with a regional metropolitan transportation system, including transit facilities. Specifically, plan for a regional transportation network that will serve the expanded Dulles Airport facility and will not preclude mode options and transportation capabilities to serve additional terminals on the southern portion of the Airport, if such facilities are ever planned and developed. Include planning options for serving any facility such as the future Annex of the Air and Space Museum.
12. Incorporate a provision for rail transit, including right-of-way, station(s) and stops, into the design of the development once a general alignment for a rail transit system has been determined.
13. Employ advanced and evolving technologies to increase use of existing roadway capacity and to facilitate use of public transit. Increase the number of commuters in the Dulles Suburban Center using transportation modes other than the single occupant vehicle (e.g., various types of rail, buses, car pools, van pools and bicycling).
14. Feature a transportation demand management component with specific operational objectives and implementation plans to achieve those objectives. The program should result in a reduction in single-occupant vehicle travel through increased transit ridership (rail, buses, van pools, car pools) and non-motorized transportation (cycling, walking). Incentives should be provided to encourage cooperation and reward success.
15. Provide trails which link all focal areas, public parking sites, and major recreational and public facilities.
16. Achieve Level of Service D, if feasible, as a measure of roadway performance. Identify ways to achieve this objective in the long term.
17. Locate parking facilities to service roadway access points and regional transit access points, and reduce parking in focal areas with limited vehicle access.

Economic Development

18. Promote economic stability and generate sufficient revenue to retire Tax District bonds over the short-term and long-term including any bonds issued to cover additional phases of transportation improvements.

19. Provide sites and opportunities for viable enterprises with attractive and diverse employment opportunities to promote economic synergy.
20. Enhance Dulles as an international airport and assure that future land uses outside of the Airport will be compatible with planned Airport expansion.
21. Provide sites and opportunities for national, international and regional businesses and commercial operations in the Dulles Suburban Center; provide tourism and recreation opportunities located within the Center, with convenient access to regional sites to encourage visitors to travel to this area for business and/or pleasure.

Environment and Heritage Resources

22. Protect the environment, preserve natural resources and open space. Meet or exceed federal, state, and local standards for water quality, ambient air quality, and other environmental standards.
23. Identify, study and protect heritage resources from degradation and/or destruction by public or private action.
24. Protect environmental assets, including Environmental Quality Corridors (EQCs) and Resource Protection Areas (RPAs) within stream valley parks and private "open space" in fulfillment of the Greenway concept while encouraging compatible use by the public where feasible.
25. Protect the natural environment by assuring connectivity through the Center and between adjacent districts: Design stormwater detention systems that blend with and augment features of the natural environment and which contribute to the aesthetics of their sites.

Parks and Recreation

26. Ensure the provision of adequate parklands and recreational facilities to meet the needs of the Dulles Suburban Center workforce, residents and visitors. Incorporate active recreation facilities in conjunction with both non-residential and residential development.
27. Preserve the integrity of existing and future public parklands and protect significant natural and cultural resources therein from impacts of off-site development.
28. Develop a Dulles Greenway system to provide non-vehicular access to recreational facilities, transit areas, and major tourist attractions. This Greenway system should afford passive recreation opportunities and provide linkages to the countywide and regional trails network.

IMPLEMENTATION

Based upon the identified issues and objectives for the Dulles Suburban Center, several implementation strategies are recommended. These strategies provide for a Plan that is responsive to short-term market conditions and long-term, countywide goals and maintains the viability of the Tax District financial structure. The components of this strategy include:

- A multi-jurisdictional analysis of the Route 28 Corridor in the near term to evaluate the levels and timing of transportation demand, right-of-way alternatives for possible rapid rail, light rail and/or elevated mass transit systems, location of transit station(s) and stops, land use refinements that could support these systems without increasing commercial and industrial intensities for the overall Dulles Suburban Center, the economic feasibility of the alternative systems and the prerequisite implementation mechanisms needed to successfully employ each system.
- Measures to increase housing to satisfy a variety of housing needs within the Center without violating airport noise policy or reducing the tax base within the Tax District.
- Monitoring proposed changes in the Airport noise contours and their impacts on land use planning.
- A system to monitor and evaluate the relationship between development and the supporting transportation and infrastructure.
- A performance based strategy for assessing optional uses within a long-term program designed to phase necessary infrastructure and services through commitments of both the public and private sectors.
- Cooperative review by the public and private sectors of previously approved development plans. This review should be undertaken in areas designated for higher intensity mixed-use developments in order to accommodate any planned transit system. Early action is needed to accomplish revisions before development patterns are established that preclude changes or make changes prohibitively costly.
- Development of a system to permit transfer of density within the Tax District in order to meet planning objectives without an increase in the overall density.
- Development and implementation of ordinance changes to permit and enhance mixed-use development.

Enhanced Public Transportation Corridor

In the next 10-15 years, the planned roadway network capacity will be adequate to provide for an acceptable level of transportation service in the Dulles Suburban Center. In the long term, other transportation measures, such as more frequent bus service, transportation demand management strategies, rail or new technologies, will be needed to attempt to maintain a balance between land use and transportation. Action should be taken in the near future to ensure that future options are not precluded by development that occurs in the Dulles Suburban Center over the next 10-15 years. To ensure that this occurs, Route 28 should be designated as an Enhanced Public Transportation Corridor and a detailed analysis of alternative transportation modes should be undertaken. This analysis should evaluate:

- Bus transit options including feeder bus systems;
- Potential park and ride sites;
- Transit service and support facilities;

- The potential for designated HOV lanes;
- Transportation and transit demand management program options and their advantages and limitations in terms of ridership potential, costs and funding;
- The long-term potential and feasibility of rail and other transit options and rail alignment options; and
- Alternative rail routes tied into feeder bus routes, and park and ride sites.

A principal concern is to ensure that development occur in such a way as to not preclude future transit options, particularly the option of rail transit. It is important that studies be undertaken to identify appropriate transportation transit alternatives for the area and analyze how these alternatives might be funded and implemented. The sooner that possible transit corridors or potential rights-of-way can be identified, the greater the likelihood that land can be reserved for this future option.

The concept of an elevated guideway transit system should be examined as a potential transit system to serve the Dulles Suburban Center and surrounding area. This type of system has particular promise in that it offers the ability to link employment centers in the Dulles Suburban Center with nearby residential communities in western Fairfax and eastern Loudoun Counties. This transit system is envisioned as a way to connect future rail lines in the Dulles and the I-66 corridors. An analysis of this transit system concept should be part of any evaluation of transit options for the Dulles Suburban Center.

This corridor analysis should be considered in relation to the Route 50, I-66, Dulles, and Centreville Road Corridor studies. A variety of methods to fund the Route 28 study should be explored so that this study can proceed as expeditiously as possible. Although these studies cannot all be conducted simultaneously, their work programs should be closely coordinated and phased in an appropriate and logical manner. Recommendations regarding rail alignment should be presented as a part of these studies. Once this corridor study is completed and accepted by the Board of Supervisors, the Comprehensive Plan for the Dulles Suburban Center should be reevaluated and amended as appropriate.

Residential Development in the Tax District

Residential development in portions of the Dulles Suburban Center would help create a greater mix of uses, provide more housing close to employment centers, and provide for a use that generates less peak-hour traffic than might occur if land is developed by-right under the existing zoning. However, under the current structure of the Tax District, residentially zoned properties are not subject to the tax surcharge that has been established for owners of non-residential property to fund roadway improvements. Therefore, if properties are rezoned for residential use, the economic viability of the Tax District is affected. An option for residential use is only planned in this area with the stipulation that no rezoning to a residential category shall occur until a mechanism is established by the County, or the Tax District legislation is amended, to allow for contributions from residential development without increasing the financial burden on other Tax District landowners or the County without their consent.

The objectives of providing more housing in the Dulles Suburban Center and maintaining the viability of the Tax District financial structure are not necessarily irreconcilable. Further study is needed of the potential to tax residential development or other options, such as the establishment of

escrow accounts and/or proffered contributions to a transportation fund for lands rezoned to residential use in order to prevent additional financial burdens on landowners in the Tax District or the County without their consent. This study should involve appropriate representation from both Fairfax and Loudoun Counties since the Tax District legislation and the issues involved apply to both jurisdictions.

A second factor which currently limits housing opportunities within the Tax District is the impact of airport noise. Much of the land within the Tax District located to the south of Dulles Airport is within the adopted DNL 60 dBA airport noise contour. Small areas of the Tax District located to the east of Dulles Airport are also within this contour. New residential development is not recommended in areas with projected aircraft noise exposures exceeding DNL 60 dBA.

Monitoring of Development Trends

While there is a long-term imbalance between development potential and the 1991 Countywide Transportation Plan, the system will adequately serve projected short-term development. The capacity of the roadway system could be effectively increased if new development results in a mix of uses that generate fewer peak-hour trips than the Plan baseline recommendations and if existing and future transportation demand strategies can increase the number of commuters using non-motorized transportation and public transit. Further, the requirements of the Federal Clean Air Act and new technologies could make alternatives to the automobile more feasible. Working patterns may also change through greater use of computers and telecommunications that will allow people to work at home or otherwise minimize commuter travel.

There are other potential changes which, if implemented, could have a significant impact on planning for the Dulles Suburban Center. These include the development of residential uses in the Tax District and the construction of the future Air and Space Museum Annex at Dulles Airport. In order to monitor levels and types of development, the success of transportation system management programs, and the capacity of the transportation system, a development monitoring system should be established. Such a system would establish a baseline level of development and would track new development by use, intensity and traffic-generating characteristics for the Dulles Suburban Center, within land units and highway corridors. The system should also track proffers for transportation demand systems and evaluate their effectiveness. The monitoring system would provide an "early warning" that road capacity is likely to be exceeded within a five to ten year period. This would allow for a reassessment of potential transportation and/or transportation demand management alternatives and technologies with sufficient lead time to plan and implement appropriate corrective measures.

A monitoring system would also allow for an on-going evaluation of the developing land use pattern given the land use options and flexibility built into the Plan. As optional and baseline land use recommendations are implemented, the character of some portions of the Suburban Center may change and the Plan should be revisited periodically to ensure that the changes occurring meet the planning objectives for the Dulles Suburban Center.

Transfer of Development Rights

One of the key land use objectives for the Dulles Suburban Center is to limit land use sprawl and concentrate development in nodes that can be better served by public transportation. To achieve this, it is recommended that development intensity be permanently transferred from land located within the Tax District where lower intensity development is planned, to areas identified in the Plan as "core" areas or mixed-use focal points where higher intensity development is recommended.

When evaluating areas proposed for a transfer of density, priority should be given to those sites in the Suburban Center that can be dedicated to Fairfax County to meet public needs.

In order to facilitate the permanent transfer of density on a broad scale, it is necessary to adopt a Transfer of Development Rights (TDR) plan for the Route 28 area. However, as of 1992, enabling legislation in the State of Virginia to allow municipalities to use transfer of development rights has not been enacted. It is recommended that such legislation be sought. Following enactment, a more detailed plan and program for implementing TDRs in the Dulles Suburban Center should be initiated by the Board of Supervisors. This plan should identify specific sending parcels and receiving areas.

Mixed-Use Ordinance

The land use plan for the Dulles Suburban Center recommends mixed use development for many of the land units. In some cases, the proposed mix of uses can be achieved by rezoning to the PDC or PDH categories of the County's Zoning Ordinance. In some cases, however, the Plan recommendation may be better facilitated by development of new mixed use districts. Once this Plan is adopted, the County should review and amend the Zoning Ordinance as appropriate to ensure that the Plan recommendations for mixed use can be achieved through rezoning.

Performance Based Strategy for Optional Uses

A performance based strategy for development in the Dulles Suburban Center is set forth below. This strategy provides the developer the opportunity for a broader range of uses if it can be clearly demonstrated that the uses will have lesser peak-hour impacts than would be generated if the site were developed at the baseline Plan recommendation and that the uses are compatible with adjacent development and of a high quality that will contribute to the image and economic vitality of the Dulles Suburban Center.

Under this approach, the Plan text for each land unit generally provides for a baseline recommendation and one or more optional uses. For each land unit, the baseline Plan recommendation generally provides for the continuation of existing uses and intensities. In some cases, these may be uses which primarily generate off-peak hour trips and these uses are planned to be retained. Where optional uses are specified, these uses generally generate fewer peak-hour trips, and can be developed compatibly with the surrounding area. Site-specific conditions may also apply to the baseline and optional use recommendations. Under the options, the overall intensity may vary as long as the identified performance criteria for traffic impacts and compatibility and site-specific conditions are met. Once a land use option is exercised through site plan or construction, any future redevelopment should also result in lesser impacts on peak-hour road capacity when compared to the baseline Plan recommendation.

With this strategy, both the County and the landowner benefit through the effective extension of capacity of the planned roadway network and a broader mix of uses creating a more desirable environment. The performance based approach is predicated on the understanding that this approach creates a forum for flexibility, negotiation and mutually beneficial development solutions. Development proposals must demonstrate that the proposed use will contribute to objectives for the Dulles Suburban Center.

The section below describes the elements for trip generation and compatibility which form the basis for the performance criteria. The actual performance criteria are contained in the section of the Plan titled "Performance Criteria for Optional Uses".

Trip Generation Elements

As described above, development potential in the Dulles Suburban Center is far in excess of the capacity of the planned road network. Allowing for optional uses that will generate fewer peak-hour traffic trips than generated by baseline development, or that will have a lesser peak-hour transportation impact, will effectively increase the capacity of the road network by spreading the trips throughout the day or by providing more of a balance between inbound and outbound trips. Transportation Demand Management (TDM) programs that include innovative strategies to reduce single-occupancy vehicle use are appropriate and essential in the area.

In order for an optional use to be considered for approval, the applicant must demonstrate to the satisfaction of the Fairfax County Office of Transportation that the uses and intensities/densities proposed will result in lesser peak-hour traffic impacts than would be generated if the site were to develop at the maximum allowable intensity under the baseline recommendation of the Plan. The Fairfax County Office of Transportation and the Office of Comprehensive Planning will provide the applicant guidelines for this demonstration.

Compatibility Elements

Compatibility issues relate to land uses, parcel consolidation, buffers, access and circulation, the mitigation of noise and other nuisances, design and landscaping.

Land Use

Proposed uses in the Dulles Suburban Center should be compatible with adjacent existing and planned uses in terms of height and scale. If non-residential development occurs adjacent to residential uses, substantial landscaped buffers, screening, other landscape features, and/or other buffer treatments must be provided to mitigate adverse visual and noise impacts. Where residential development or mixed use development with a residential component is recommended as an optional use, projects should have sufficient acreage and number of units to create a high quality living environment through the provision of well-designed projects with recreational and other amenities for residents. Projects must provide affordable dwelling units.

Parcel Consolidation

Proposals for both baseline and optional uses should provide sufficient parcel consolidation to ensure that a development can meet all standards for setbacks, buffering and screening, open space, parking and recreational amenities; function in a well-designed, efficient manner; and not preclude the development of unconsolidated parcels in conformance with the Comprehensive Plan.

Buffers

Buffers between potentially incompatible land uses can occur at various scales - area-wide and land unit specific. At the area-wide scale, buffers can be land use types and/or intensities planned in positive relationships to one another. It is expected that transitions and buffers will occur so that the peripheral land uses of the Suburban Center are compatible in type and intensity to the adjoining areas to protect existing residential neighborhoods. Within individual land units, land use buffering should be encouraged wherever possible. Setbacks, berms, and vegetative or structural (walls and fences) screens are recommended as buffer

treatments. Where appropriate, environmental quality corridors can be incorporated as natural buffer areas.

Access and Circulation

As a part of the process to consider optional uses, the applicant should demonstrate that adequate vehicular access and circulation can be accomplished. Likewise, it should be demonstrated that the optional use or uses help provide a circulation pattern that can efficiently serve the area and will not result in adverse impacts to the surrounding area. If residential development is an optional use under consideration, the analysis of access and circulation should examine how the residential community will provide access to mass transit, public transportation, schools, parks and recreation facilities, and other community services.

Pedestrian circulation is an important issue that should be addressed through the development process. While the degree of pedestrian circulation provided on-site may vary, all optional uses should demonstrate that they will contribute to the implementation of a comprehensive network of trails and sidewalks for pedestrian circulation related to the Dulles Suburban Center.

Mitigation of Noise and Other Nuisances

Noise and light produced by an optional use must be examined to determine that it does not negatively impact adjacent residential or non-residential uses. Measures such as landscape buffers, berms, walls and fences, pedestrian - scaled light poles, and the directing of light away from existing development should be used to mitigate any identified impacts.

Design and Landscaping Elements

Frequently in the land unit recommendations the term "high quality" is used to describe the character of development desired for the Dulles Suburban Center. For the purpose of evaluating development proposals, the quality of development for both baseline and optional uses will be defined in terms of the proposal's ability to achieve the "Design Guidelines for the Dulles Suburban Center," following the recommendations for Land Unit K.

PERFORMANCE CRITERIA FOR OPTIONAL USES

Within each of the land units of the Dulles Suburban Center, recommended land uses and intensities/densities are specified with a baseline Plan recommendation for development. In some cases, other uses that may be appropriate under certain conditions are also specified. These are called optional uses. Under the options, the overall intensity may generally vary as long as the identified performance criteria for traffic impacts, compatibility and site-specific conditions are met. In those instances where retail use is an option, a maximum intensity is specified to provide guidance as to the scale of retail development that is appropriate. Although not specifically referenced in each land unit, institutional uses and uses allowed by special permit and special exception may be considered as optional uses throughout the Dulles Suburban Center.

To develop property with an optional use, an applicant shall submit to the County a development proposal for a rezoning, special exception or special permit, as appropriate, with sufficient detail and information that fulfills the following items:

- Provides an analysis that demonstrates, to the satisfaction of the Fairfax County Office of Transportation, that the uses and intensities/densities proposed will result in lesser peak-hour traffic impacts than would be generated if the site were to develop at the maximum allowable intensity for the Plan baseline recommendation. In those land units where a range of intensities is specified (example: .50-1.0 FAR) the low end of the range should be used for calculating peak-hour trip equivalencies;
- Provides evidence that all compatibility elements are satisfied;
- Provides information that demonstrates that the proposed uses will contribute to the economic vitality of the area; and
- Provides excellence of design, as demonstrated by the development proposal's ability to respond to the Design Guidelines for the Dulles Suburban Center.

Development Elements: Transportation

In order for an optional use to be considered for approval, the applicant must meet the following applicable criteria for trip generation:

- For all options, the proposed use and intensity will have lesser peak-hour traffic impacts than would occur if the site were to be developed at the maximum intensity allowed in the baseline Plan recommendation. This should be demonstrated to the satisfaction of the Fairfax County Office of Transportation and the Office of Comprehensive Planning.
- In assessing the peak-hour traffic impacts, conversion ratios for some common optional uses will be assessed according to the factors specified in the current edition of the Institution of Transportation Engineers (ITE) Manual. For example, the following conversion ratios, from the 4th edition of the ITE Manual, would be used in assessing the impacts of an optional use against a baseline recommendation of general office use.
One million gross square feet of general office use will generate a level of afternoon outbound traffic that is similar to:

1.4 million gross square feet of industrial flex space (a ratio of 1:1.4);

3.0 million gross square feet of hotel space, (or 3700 rooms) (a ratio of 1:3.0);

11.1 million gross square feet of townhouse space (or 6150 units) (a ratio of 1:11.1); or

6.4 million gross square feet of multifamily space (or 6400 units) (a ratio of 1:6.4).

Compatibility Elements

Residential

Where residential development is to be considered as an option, the proposed development must:

- Be compatible with adjacent existing and planned development in terms of building heights, scale and density.
- Assure that development of adjacent lands can occur in a fashion which is compatible through joint application and/or demonstration that the zoning for adjacent lands would be compatible with the proposed use.
- Minimize human exposure to unhealthful levels of noise in accordance with the guidance provided by the Policy Plan under Environment Objective 4.
- Predominately residential projects as opposed to mixed-use projects should be approximately 10 acres in size to create a high quality living environment including recreational and other on-site amenities, at a minimum.
- Provide for affordable housing as outlined in the Plan text for the Dulles Suburban Center.
- Provide needed right-of-way for an integrated rail transit system for the Dulles Suburban Center, once a general alignment has been determined.
- If sites are identified, provide or participate in the provision of land, as may be practical, to achieve future school facility needs.

Non-Residential

Where non-residential development is to be considered as an option, the proposed development must:

- Demonstrate that mitigation measures for noise, glare, lights and other nuisance aspects related to non-residential development are adequate to ensure the proposed use will not adversely impact adjacent development. Mitigation measures may include the provision of berms and landscaping, limitation on hours of operation, limitation on the heights of light poles and other measures.
- Provide coordinated access.
- Provide for consolidation of appropriate parcels.
- Provide needed right-of-way for an integrated rail transit system for the Dulles Suburban Center, once a general alignment has been determined.

Design Elements

Where residential and non-residential development is to be considered as an option, the proposed development must demonstrate high quality design. Design will be evaluated in terms of the ability of a development proposal to meet the Design Guidelines for the Dulles Suburban Center.

DULLES SUBURBAN CENTER AREA-WIDE RECOMMENDATIONS

LAND USE

The Plan for the Dulles Suburban Center recommends baseline and optional land uses to guide development in the area. To obtain the development flexibility afforded by the optional uses, applicants must demonstrate that all applicable performance criteria, as outlined in the implementation approach, are met. All land uses should reinforce the overall goals and objectives of the Plan in both their type and arrangement and should relate positively to the transportation system, as well as to one another, in order to achieve the highest collective development quality for the area.

Development should be consistent with the need to maintain and enhance the economic viability of the Route 28 Tax District. Where the Plan specifies residential use as an option, the appropriateness of this use is contingent upon a mechanism being established by the County to allow for contributions from residential development or the Tax District legislation being amended to allow for the taxing of residential development, to permit residential development without increasing the financial burden on other Tax District landowners or the County without their consent. This modification should involve the collective participation of property owners and local officials and community representatives from Loudoun and Fairfax Counties. Under no circumstances should residential use be considered for areas that are impacted by noise from Dulles Airport as set forth in the environment recommendations for Area III.

Existing stable neighborhoods within the Dulles Suburban Center that are planned for continued residential use should be preserved. Infill development in these areas should be of a compatible use, type and intensity in accordance with the guidance provided by the Policy Plan under Land Use Objectives 8 and 14.

Two residential communities, Rockland Village and Dulles Meadows are planned for future redevelopment. Until such time as a change in land use consistent with the Plan occurs, every effort should be made to protect these communities from any negative impacts caused by adjacent non-residential development. Any attempts to consolidate Rockland Village for redevelopment should be in accordance with the Guidelines for Neighborhood Redevelopment as set forth in the Land Use section of the Policy Plan and should not result in new residential development in areas with projected aircraft noise exposures exceeding DNL 60 dBA.

Urban Design Principles

The principles of urban design to be followed in the Dulles Suburban Center are represented by four words: Function, Order, Identity and Appeal. Below is a brief discussion of these terms:

Function. If an area is designed well, it generally works well; it serves its purpose. Function can be achieved if:

- People can conduct their business easily, efficiently and safely, usually resulting in higher economic return; and
- The area has all the needed linkages (i.e., good access for pedestrians and vehicles) and has a clear and easily understood circulation system which reduces reliance on the auto.

Order. Good design is logical and well organized. It presents a coherent, clear image for the

area. If an area has good order, it addresses the following:

- The average user can understand where he/she is and how to get around easily. There is a pattern or layout to the area that can be recognized and remembered; and
- The area displays visual unity that is manifested through a cohesive use of design elements. This cohesiveness is carried out through themes in landscaping, architecture, paving, building materials, and signage. This does not mean that everything looks the same, but that there are some common elements with variety when appropriate.

Identity. Good design helps an area take on a special character or strong image that provides a sense of place, or a pattern that makes it easy to distinguish it from other areas. An area with good identity exhibits the following characteristics:

- It uses landmarks or focal points to give the entire area a special focus or character (e.g., Dulles Airport);
- It strongly defines the area as a whole, as well as areas of special character, using gateways, edges, parks, buffers, and/or natural features as boundaries; and
- It uses special land use patterns, such as mixed-use districts, historic areas, and special shopping areas to achieve a separate identity for small areas within the larger area.

Appeal. Defining appeal is subjective, but an area which is visually appealing usually displays some of the following characteristics:

- The economic return of the area is high because people are attracted to it. The image of the area is positive, and human interaction is encouraged. A high level of activity exists, because users enjoy being there;
- A high degree of visual unity exists, not to the point of monotony, but with harmony of style, color and scale; and
- Visual diversity also exists, resulting from interesting differences and contrasts, such as unique building forms or skylines, views, or vistas.

Urban Design Objectives

The quality of the built and natural environment is an important consideration in planning for the Dulles Suburban Center because recent development has, for the most part, established a high standard for design. The intent of the following design objectives is to achieve the goal of protecting the existing high-quality built environment and the natural environment, while ensuring the compatibility of future development. Specific guidelines to be used in implementing these objectives are found in the section titled "Design Guidelines for the Dulles Suburban Center" after Land Unit K in the Suburban Center Plan text.

Design Objectives

1. Provide high-quality development that is functionally integrated, orderly, identifiable and attractive.

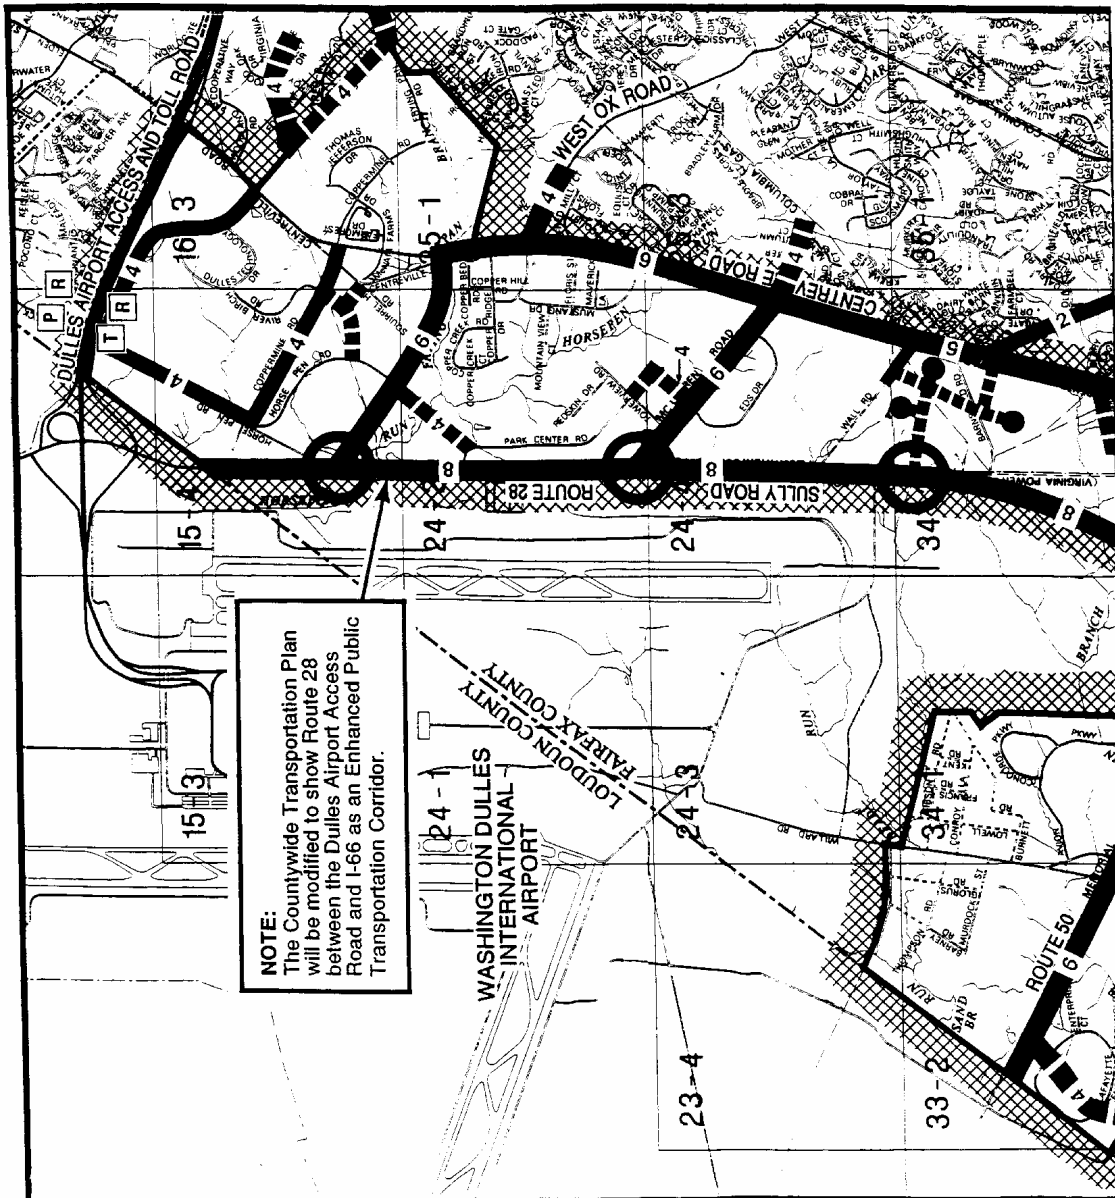

2. Create a positive and easily recognizable identity for the Dulles Suburban Center as a whole, and also for individual development units. Establish a sense of place and assist in orienting people to find their way to the area's workplaces, stores, and other facilities.
3. Design development to allow for pedestrian access between buildings, thus reducing reliance on the auto; provide open space for active and passive recreation, and visual relief; allow opportunities for shared parking; and generally make more efficient use of land, a valuable resource.
4. Create vehicular and pedestrian/non-motorized vehicle circulation systems that minimize conflicts between these different modes of travel, and that are clearly identified for easy use.
5. Protect adjacent residential neighborhoods from the impacts of new development by establishing landscaped buffers and other landscaping features, as well as maintaining high standards for architectural quality. Keep noise, glare and traffic intrusion at a minimum.
6. Protect and enhance environmental and heritage resources, integrating these features into development to the greatest extent possible.
7. Encourage parcel consolidation in order to realize the benefit of comprehensive urban design and circulation/access principles.
8. Create highway corridors that function well, are visually appealing, and provide clear linkages to the rest of the Dulles Suburban Center.
9. Promote a positive image for the Dulles Suburban Center in keeping with the high architectural and design standards for development of the area as a whole.

TRANSPORTATION

Transportation recommendations for the Dulles Suburban Center are shown on Figures 3 and 4. Travel within and through the Dulles Suburban Center is affected by land uses and transportation facilities in adjacent areas as well as throughout the Northern Virginia region. Therefore, the transportation network for this area is comprised of many elements which relate to the more extensive countywide facilities, services, and policies. Transportation planning must consider how state roads and other means of transit can be integrated with similar facilities inside the Dulles perimeters. In all future corridor and transportation studies particular attention should be paid to the possibility of rail transit.

General

The 1991 Fairfax County Transportation Plan for this area is largely dependent on completion of an improved highway network and extension of two radial rail transit lines. While these facilities are essential to satisfying future requirements, the capacity of the system is inadequate to accommodate at acceptable levels of service the transportation demand of planned and zoned development. This is particularly the case when demand projections rely principally on conventional

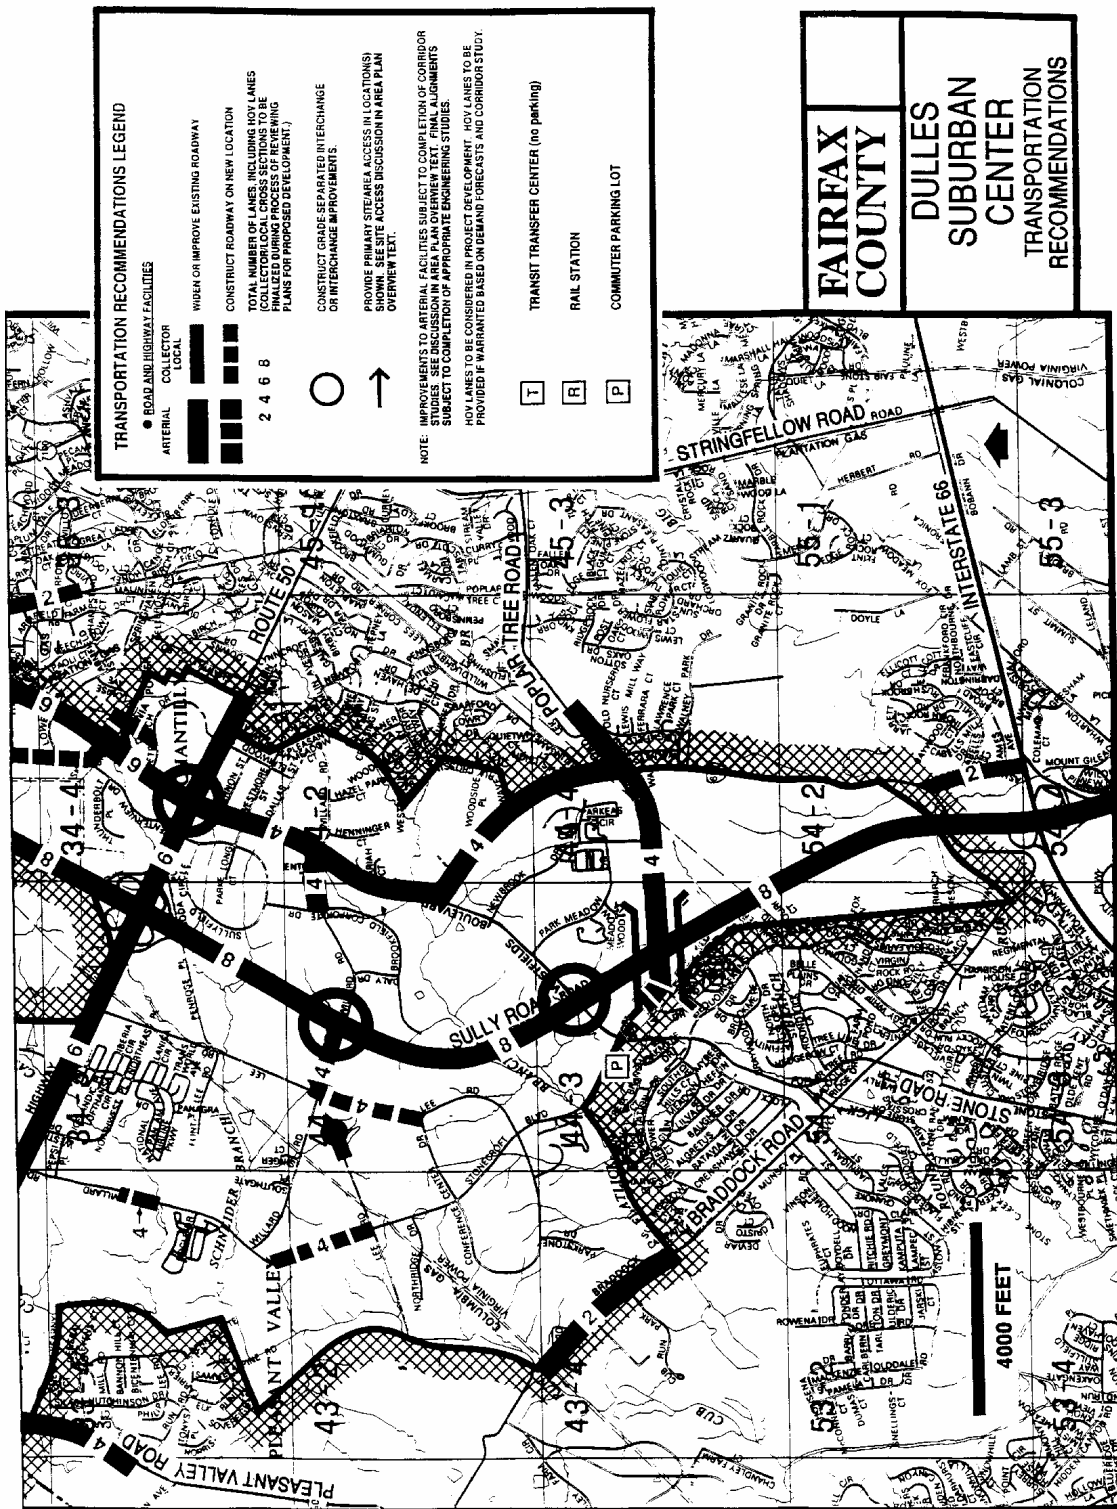

FIGURE 3

CENTREVILLE ROAD IMPROVEMENTS

Improvements to Centreville Road from the Dulles Access and Toll Road to Route 50 should be provided as follows:

- Priority should be given to the acquisition or dedication of right-of-way for the future six lane improvement of Centreville Road. At the time of rezonings, attempts will be made to acquire right-of-way through dedication.
- Construction of six lanes should proceed for the roadway segment from the Dulles Toll Road to Frying Pan Road.
- For the segment from West Ox Road to Route 50, construction of four lanes (with outside curb-and-gutter and permanent drainage structures) and a 42-foot wide, graded grass median should be implemented. These improvements should be located along the west side of the existing alignment of Centreville Road.
- Sufficient right-of-way should be provided at intersections, consistent with the ultimate six-lane design. The need for dual left turn lanes into or out of major residential developments along Centreville Road, such as Franklin Farm Road, should be reevaluated at such time as funds become available for construction of the segment from McLearen Road to Route 50.
- The need for widening Centreville Road from four lanes to six lanes should be reevaluated after improvements to Route 28, the Fairfax County Parkway, and West Ox Road are completed. Furthermore, this decision should follow the completion of a transportation and traffic study conducted in accordance with accepted standards.

NOTE:

The Countywide Transportation Plan will be modified to show Route 28 between the Dulles Airport Access Road and I-66 as an Enhanced Public Transportation Corridor.

TRANSPORTATION RECOMMENDATIONS LEGEND

- ROAD AND HIGHWAY FACILITIES
- ARTERIAL COLLECTOR LOCAL
- WIDEN OR IMPROVE EXISTING ROADWAY
- CONSTRUCT ROADWAY ON NEW LOCATION
- 2 4 6 8 TOTAL NUMBER OF LANES, INCLUDING HOV LANES (COLLECTOR/LOCAL CROSS SECTIONS TO BE FINALIZED DURING PROCESS OF REVIEWING PLANS FOR PROPOSED DEVELOPMENT.)
- CONSTRUCT GRADE-SEPARATED INTERCHANGE OR INTERCHANGE IMPROVEMENTS.
- PROVIDE PRIMARY SITE/AREA ACCESS IN LOCATIONS SHOWN. SEE SITE ACCESS DISCUSSION IN AREA PLAN OVERVIEW TEXT.

NOTE: IMPROVEMENTS TO ARTERIAL FACILITIES SUBJECT TO COMPLETION OF CORRIDOR STUDIES. SEE DISCUSSION IN AREA PLAN OVERVIEW TEXT. FINAL ALIGNMENTS SUBJECT TO COMPLETION OF APPROPRIATE ENGINEERING STUDIES.

HOV LANES TO BE CONSIDERED IN PROJECT DEVELOPMENT. HOV LANES TO BE PROVIDED IF WARRANTED BASED ON DEMAND FORECASTS AND CORRIDOR STUDY.

and historical suburban trip generation rates that reflect a high percentage of single occupant vehicle (SOV) travel. Therefore, to fulfill quality of life and economic development objectives, it is essential to fashion a transportation system that can support the likely level of demand that will be generated by the improved pattern of transit-friendly land uses envisioned.

Special Requirements

1. A regional corridor analysis should evaluate the most promising systems now available, identify feasible routes and specific station sites for mass transit facilities, and estimate approximate system costs.
2. Public and private commitments essential for right-of-way acquisition and project design must be identified. Redesign of proffered development plans at already approved intensities should be encouraged and undertaken on a voluntary, no-fee, cooperative basis as a measure of public and private commitment.
3. A monitoring system is needed to evaluate actual and projected transportation demand against existing capacity and programmed expansion. Part of the monitoring system should be a triggering mechanism that will signal the need for additional capacity or other options to keep demand and capacity synchronized.
4. Procurement and/or preservation of right-of-way and station sites should be initiated in accordance with the Plan through the development process, once a general alignment for a rail transit system has been determined.
5. Maintenance facilities may be required for an integrated transit system. Such facilities should be designed to be compatible with existing and planned land use in the vicinity by using such techniques as buffering and screening.
6. A ring road on the Dulles Airport property should be considered as part of the master plan in order to provide the opportunity for more than one potential access point to the future Smithsonian Air and Space Museum Annex. This will help mitigate potential traffic congestion in adjacent areas and on Route 28.
7. Bus service linking residential, commercial and employment areas should be provided throughout the day to encourage residents and the workforce to shop and do business via transit.

Concept

The transportation system proposed for the Dulles Suburban Center should have the following characteristics:

- Be multi-modal in nature, employing an appropriate mix of rail, light rail, and buses;
- Be phased to provide necessary capacity as demand increases;
- Provide area transportation within the Dulles Suburban Center; linkage to adjacent employment and residential sectors; and ties to the radial system connecting to more distant destinations via connections to other roadway and transit facilities;

- Incorporate technological advances which facilitate transportation system management in order to obtain the most effective use of available capacity; and
- Feature an effective transportation demand management program that will encourage public-private cooperation in activities that reduce overall demand on the system.

Potential Transportation Strategies

The following text discusses possible strategies to implement the transportation concept. Effectiveness of the transportation plan requires some policy changes and amendments to County ordinances and regulations to allow Fairfax County to benefit from successful transportation programs employed by other comparable jurisdictions around the nation.

Implementation of this transportation plan should begin at once with authorization of a Route 28 corridor analysis conducted in conjunction with adjacent jurisdictions along the corridor. The analysis should be designed to identify means of adapting these concepts to the corridor, to evaluate the economic feasibility of employing the systems proposed, to lay a foundation for creating a phasing mechanism to relate demand to capacity, and to outline a procedure for effectively monitoring plan implementation.

Phased Multi-Modal System

The current and programmed capacity of the 1991 Transportation Plan provides adequate capacity to accommodate projected growth for up to 20 years. The Transportation Plan has limited capability for expanding roadway capacity without extensive and community disruptive land acquisition and/or significant change in travel behavior. Therefore, it is essential to evaluate potential revisions to the Transportation Plan to accommodate projected demand.

Construction of new transportation capacity should be triggered by projected demand in a timely manner to allow infrastructure to keep pace with demand. Because the highway network serving the Dulles Suburban Center will likely become inadequate over time, other transportation modes and measures will be needed to meet demand. Increased reliance must be placed on mass transit (bus, rail, light rail), HOV, and transportation demand management. The ultimate system must serve local community transportation needs, serve employment locations throughout the Dulles Suburban Center, as well as provide connections to the Metro transit system serving the greater metropolitan area.

Evolving Technology

The numerous evolving technologies for moving people should be closely monitored for potential efficient and cost effective adaptation within the Dulles Suburban Center. In view of the significant commitment made by the federal government to transit and the Intelligent Vehicle Highway System (IVHS) in the adopted Intermodal Surface Transportation Efficiency Act of 1991, serious effort must be expended to secure federal funding for transportation and land use studies and implementation programs authorized by the Act. Many of these measures could expedite traffic flow for both transit and automobile.

Transportation Demand Management (TDM)

Most transportation demand management programs require behavior modification on the part of some of the commuter population. TDM programs are aided most significantly by making available clean, reliable, affordable alternatives.

Current rideshare matching programs can be improved and expanded. Evaluation should be based on results. Car pool, van pool, and bus pool ridership can be enhanced by an appropriate mix of rideshare incentives and single-occupant vehicle (SOV) disincentives. Incentives include preferential treatment by employers, e.g. reserved parking, flextime, fare subsidies, and guaranteed ride home. Disincentives for SOV commuting may include paid or taxed parking and congestion pricing. Employers may also be offered incentives through reduced capital costs stemming from reduced parking requirements.

Improved project planning can also reduce travel demand. Affordable housing integrated with or proximate to employment is a significant and much needed measure. Longer distance commuters can benefit from transit-friendly project design. All employees can benefit from improved pedestrian-oriented urban design that features clustered office buildings and retail, service, and leisure amenities.

By the time additional transportation capacity is needed, active encouragement of telecommuting in the work place could also greatly reduce travel demand. The federal and state governments are setting a good example that Fairfax County should emulate for its own employees and encourage in the private sector.

Policies and Regulations

There are a multitude of actions in this area that could aid travel in the County. Some of these are:

1. Adoption of a Transit Zone District in the Zoning Ordinance to provide a new classification for areas within a one-half mile radius of a transit station. Increased intensity in mixed-use developments are needed here to make mass transit more economically viable. An associated ordinance equitably framed to permit density transfer from more distant parcels to the Transit Zone would help achieve the preferred pattern of land use. The objective of increased density around transit stations and reduced intensity between stations might also be achieved under the proffer system without new enabling legislation but is more cumbersome.
2. Parking regulations need further amendment. Consideration might be given to making a parking maximum out of today's minimum parking requirements as has been done elsewhere. Permanent parking reductions should be permitted for binding TDM commitments and for airport-oriented hotels and similar tourist-oriented enterprises.

Transit Guideway System

In order to meet the transportation demands that are anticipated for the Dulles Suburban Center and to address the imbalance between the zoned development potential of the area and the planned roadway capacity, a fixed-guideway transit system is recommended for consideration. An illustrative fixed-guideway transit system is shown on Figure 5. This illustration depicting various route options is provided as a basis for inclusion in the recommended Route 28 corridor analysis. A station should be considered at the Smithsonian Air and Space Museum Annex during the detailed

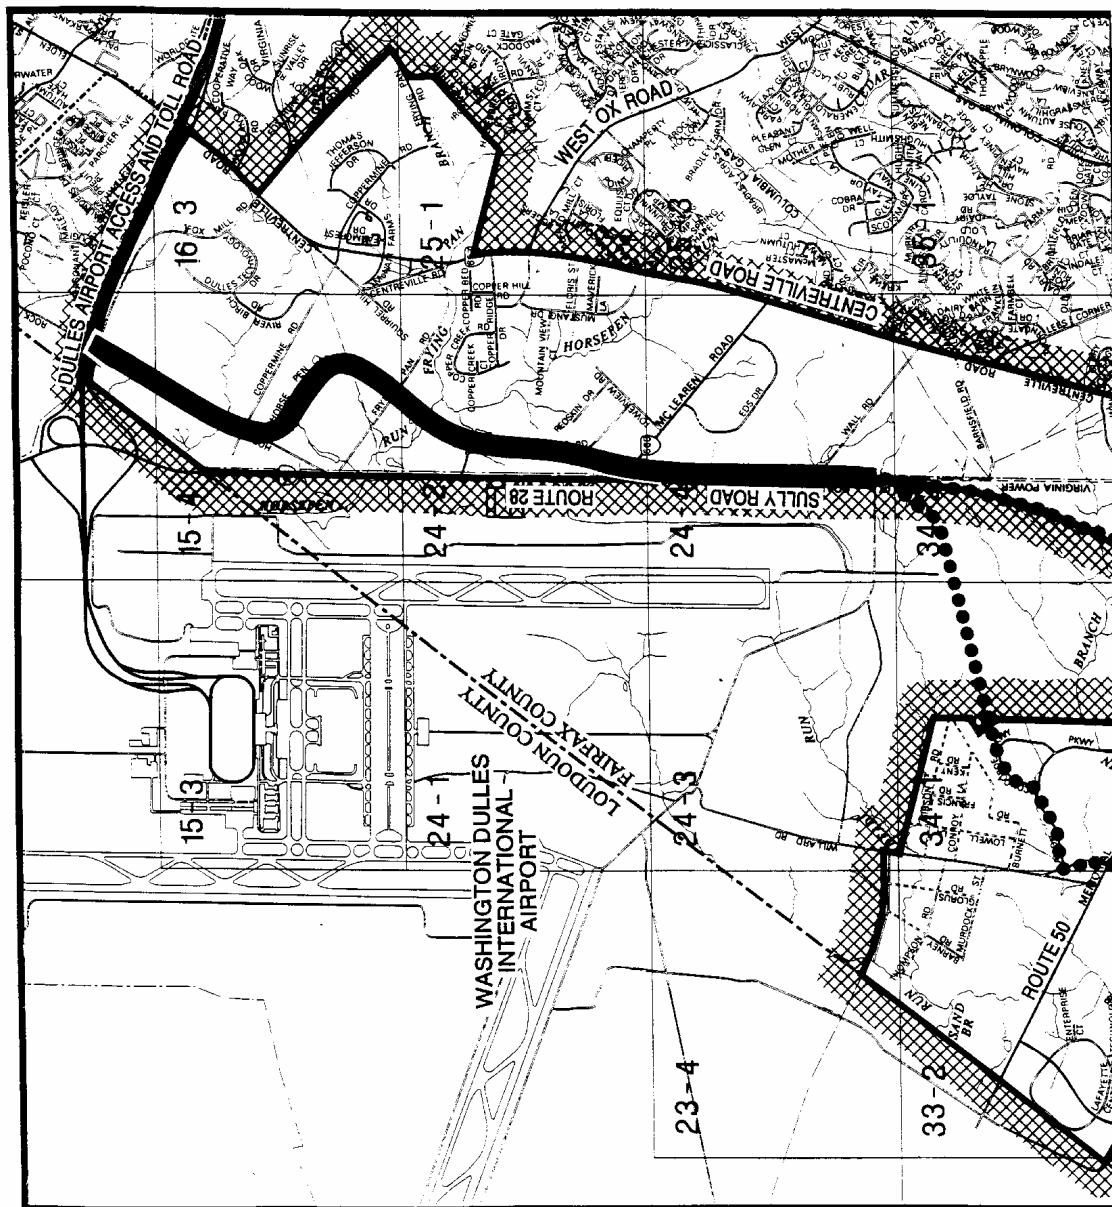

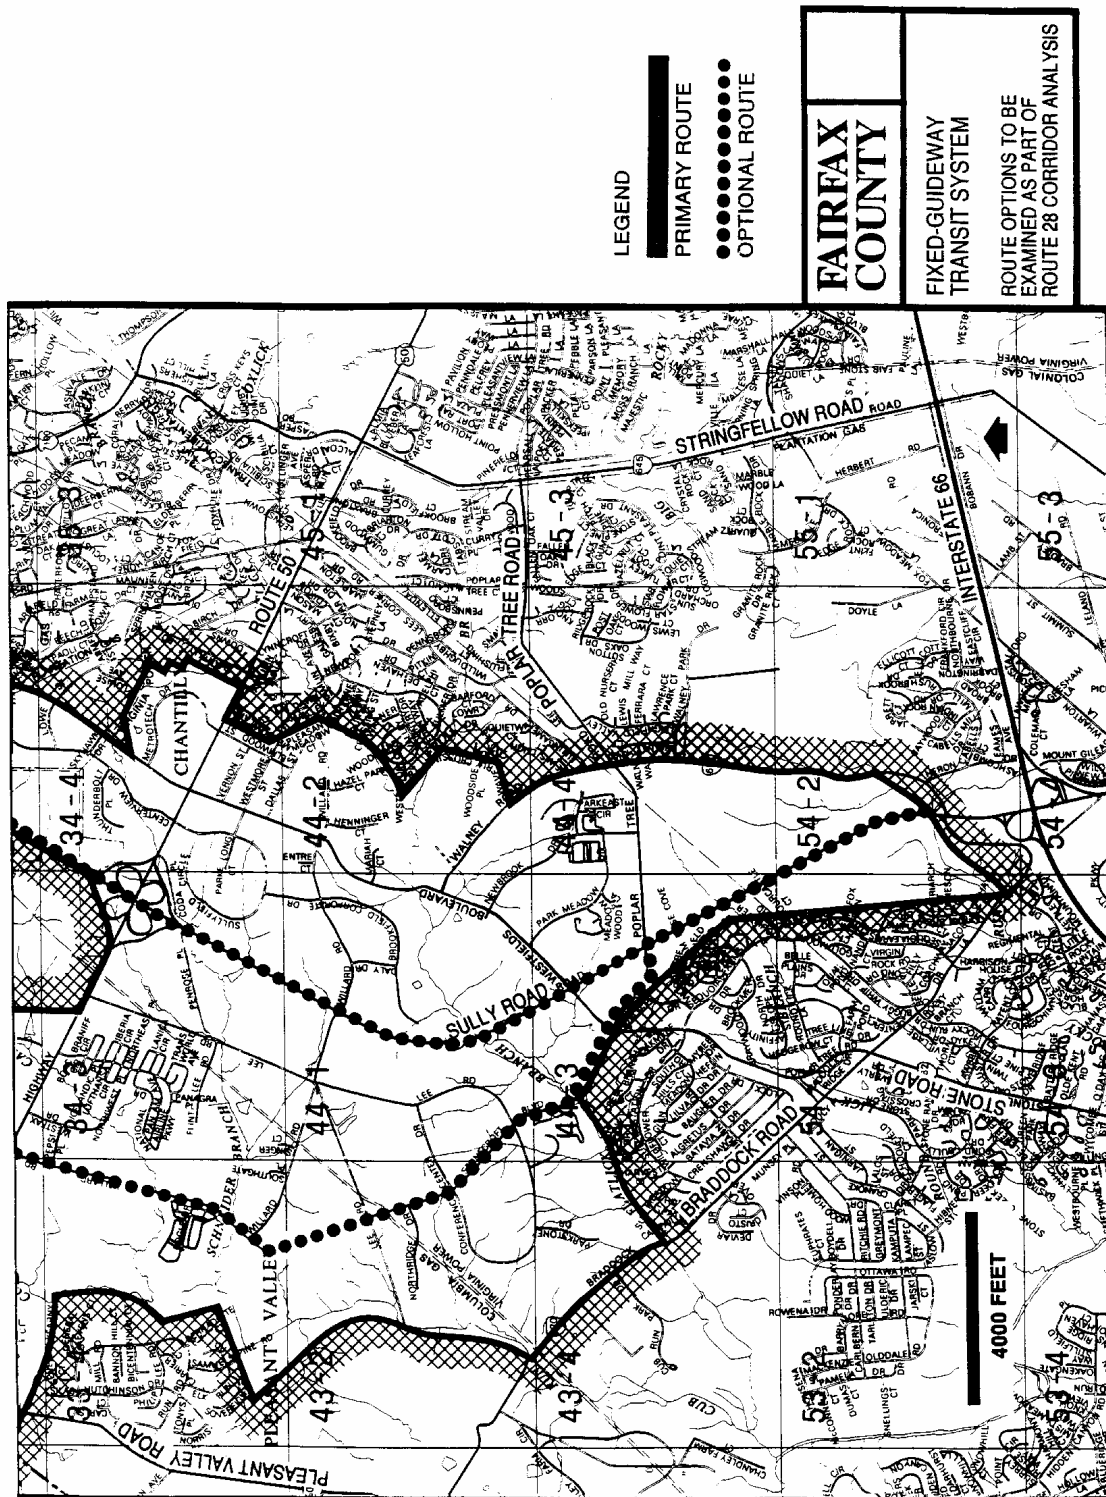

FIGURE 5

corridor analysis associated with this system. Dedication of right-of-way for such a system should be sought once a more specific alignment for such a system has been determined. In order to serve a greater number of people, this system could extend beyond the boundaries of the Dulles Suburban Center and Fairfax County. The regional aspects of this transit system should be incorporated into any future consideration of the feasibility of this proposal.

ENVIRONMENT

The western quarter of Fairfax County, including the entire Dulles Suburban Center, is located within a geologic feature known as the Culpeper Basin, an ideal landform for a major airport. The area is characterized by relatively level terrain, sluggish streams in broad, shallow floodplains and siltstone and sandstone bedrock located at or near the surface. Given the absence of mountain barriers or urban high-rises, the environment for aviation is almost ideal. It may be said that the geology of the Dulles Suburban Center area, which is also the cause of the area's environmental constraints, including broad floodplains, poorly drained wetland areas and shallow soils, also provides an ideal site for the most significant land use determinant in the Suburban Center, the Airport itself.

Within the Dulles Suburban Center, airport noise and environmental quality corridors (EQC) are the primary environmental constraints to development. The floodplain areas and areas of freshwater wetlands, which account for most of the environmental quality corridor areas in the Dulles Suburban Center, are the primary environmental resources which should be protected and incorporated into the development pattern. The Chesapeake Bay Preservation Ordinance should not have a significant impact on planning within this area. The Ordinance's Resource Protection Areas in which development would be restricted are contained within the EQC boundaries.

Environmental Quality Corridors

Most of the environmentally sensitive land within the Dulles Suburban Center is included within the Cub Run, Flatlick Branch, Frying Pan Branch, Cain Branch and Horse Pen Run Stream Valley Environmental Quality Corridors. One objective contained in the Policy Plan is to "Identify, protect and enhance an integrated network of ecologically valuable land and surface waters for present and future residents of Fairfax County." Policy A under this objective reads "For ecological resource conservations, identify, protect and restore an Environmental Quality Corridor system (EQC)."

Because most of the land within the Dulles Suburban Center is characterized by low relief, the stream valleys have broad floodplains and poorly drained wetland areas. Areas of 15 percent slope are uncommon. In general, the boundary of the floodplain is also the boundary of the EQC. Much of the wetland area is also located within the floodplains. There are also areas of isolated wetlands which do not qualify as components of the EQC system because they are not directly connected to a stream valley. Nevertheless, these isolated wetland areas, which are common south of the Airport, constrain development because they are subject to the requirements of the Federal Clean Water Act. Activities that result in destruction of these wetlands are regulated by the United States Army Corps of Engineers and the Environmental Protection Agency.

Airport Noise

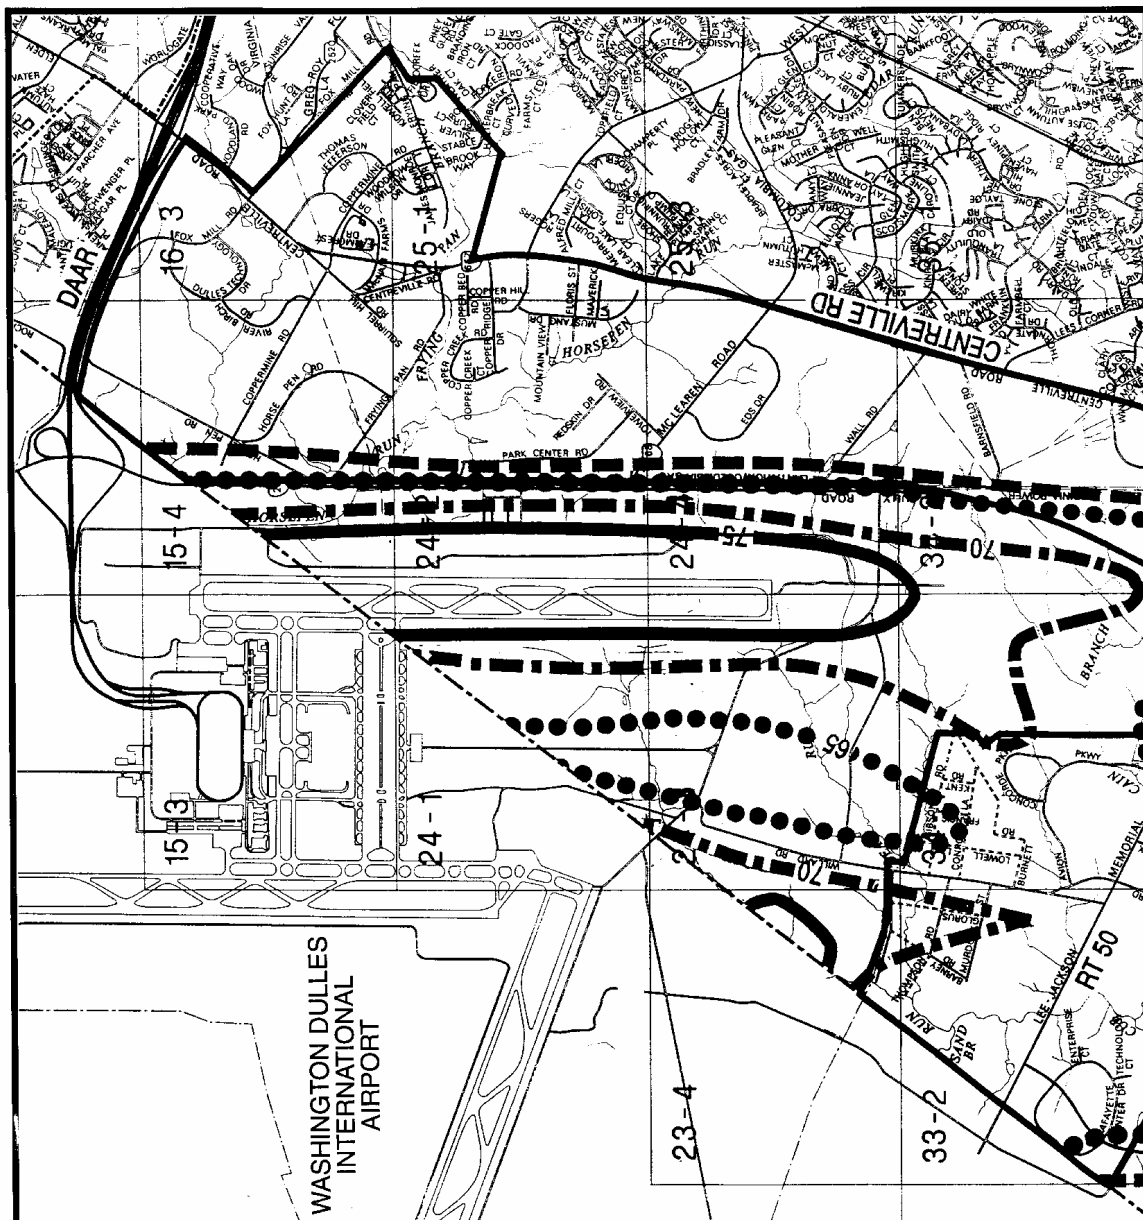

Much of the Dulles Suburban Center is included within the Airport Noise Impact Overlay District (ANIOD) of the Zoning Ordinance. The ANIOD was established to ensure the achievement

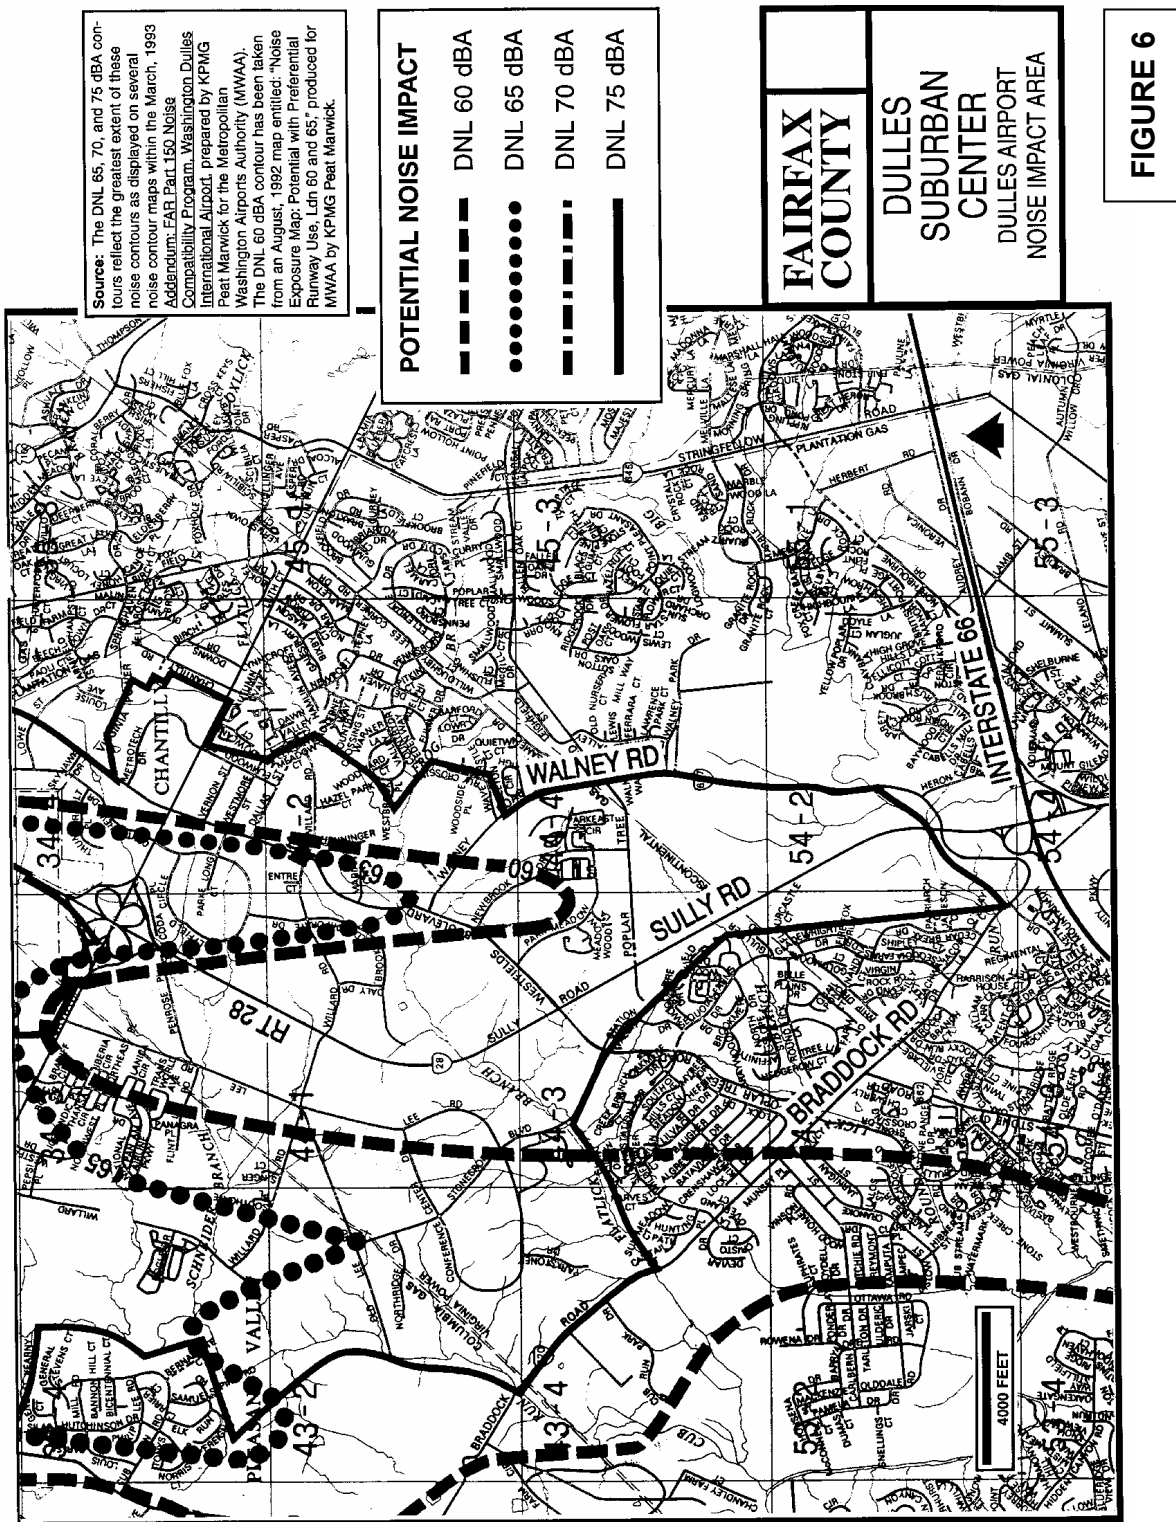

of interior noise guidelines suggested within federal noise compatibility documents for residential and other uses that are constructed within ANIOD and to prohibit residential and certain other noise sensitive uses from areas subject to particularly severe impacts from aircraft noise. While new residential development is permitted within ANIOD, such development is not recommended in areas with projected aircraft noise exposures exceeding DNL 60 dBA. Where new residential development does occur near Washington Dulles International Airport, disclosure measures should be provided. Figure 6 presents a map of the Dulles Airport noise contours as they relate to the boundaries of the Dulles Suburban Center. The DNL 65 dBA, DNL 70 dBA, and DNL 75 dBA contours reflect the greatest extent of these contours as displayed on several noise contour maps within the March, 1993 Addendum: FAR Part 150 Noise Compatibility Program, Washington Dulles International Airport prepared for the Metropolitan Washington Airports Authority (MWAA). The DNL 60 dBA contour was taken from the long-term potential DNL 60 dBA contour map provided to the County by MWAA.

A more extensive discussion of noise compatibility planning and Dulles Airport noise impacts is contained in the Area Plan Overview for Area III under the heading "Land Use Planning Within the Dulles Airport Noise Impact Area."

Additional area-wide environmental recommendations are as follows:

1. Preserve the Horse Pen Run and Frying Pan Branch Stream Valleys through dedication to, or acquisition by, the Fairfax County Park Authority.
2. Water quality recommendations presented at the beginning of the Area III section of the Plan should be applied to those lands within the Occoquan Basin.
3. The clustering of development, where compatible, is strongly advised because it increases open space and has a beneficial effect on water quality in the Occoquan Basin.
4. Aircraft noise mitigation recommendations presented at the beginning of the Area III section of the Plan should be applied to those lands within the Dulles Airport Noise Impact Area.
5. Highway noise mitigation should be provided for noise-sensitive land uses to ensure a healthful living and working environment in which speech and activity interference is minimized in both interior and exterior areas.

HERITAGE RESOURCES

The Dulles Suburban Center contains both known and potential heritage resources. A list of those heritage resources included on Fairfax County's Inventory of Historic Sites, as of August 1992, is listed on Figure 7. The Inventory is open-ended and continues to grow. For information about these and other historic sites, consult the Office of Comprehensive Planning.

There are numerous heritage resources in this sector including standing structures as well as both prehistoric and historic archeological sites. The Horse Pen Run drainage area has been occupied almost continuously since 8,000 B.C.

Basic countywide heritage resource preservation policies are applicable throughout the Dulles Suburban Center. Site designs that minimize the disturbance and avoid the destruction of significant heritage resources are desired. It is expected that property owners will consult and work with the Fairfax County Heritage Resources staff to determine the presence or absence of significant heritage resources and take appropriate preservation, recovery and recordation action in accordance with the countywide policies before development plans are approved.

Other heritage resources including those protected by Historic Overlay Districts, or listed on the National Register of Historic Places or the Virginia Landmarks Register are also shown on Figure 7, and may be identified in the text and recommendations section.

The Fairfax County Inventory of Historic Sites, the Virginia Landmarks Register, the National Register of Historic Places, and Historic Overlay Districts promote the recognition of architecturally or historically significant property. Designation confers public recognition and can offer incentives for preservation to the property owner.

The County Inventory of Historic Sites includes properties which meet certain eligibility criteria and are officially designated by the County's History Commission. In addition to architectural or historic significance, property that serves as a focus of community identity and pride may also be recognized. The benefits of designation include public recognition of the structure's significance and enhanced support for preservation. Owners of properties included in the Inventory may meet with the County's Architectural Review Board on a voluntary basis to review proposed changes to their properties. Designation, however, does not preclude demolition.

The Virginia Landmarks Register and National Register of Historic Places also officially recognize properties meeting appropriate criteria. Like the County Inventory, recognition does not prohibit demolition. Inclusion on the respective register does, however, require that any state or federally funded or sanctioned action that would have an adverse effect on a listed property be reviewed by the appropriate state or federal preservation agency.

The Historic Overlay District is a zoning tool used to regulate proposed new construction and changes to existing structures in areas containing heritage resources to ensure compatibility with the resources. Site design, facades, demolition, and building materials must be reviewed and approved by the County's Architectural Review Board.

PUBLIC FACILITIES

Existing public facilities located within the Dulles Suburban Center and those for which a future need has already been identified and prior approval received are included on Figure 8. Major

expansions of existing facilities (with the exception of Federal or State facilities) or uses of land that are distinctly different than the use of the public facility must be considered by the County Planning Commission through provisions outlined in Section 15.2-2232 of the Code of Virginia. For these existing facilities minor expansions which are in keeping with the character of the facility may be considered in conformance with the Plan.

- An elementary school site has been proffered within the McNair Farms development (Land Unit B). Based on the proposed residential development in the Dulles Suburban Center, there will likely be a need for an additional intermediate and/or high school site. There may also be a need for an additional elementary school site. The School Board should identify appropriate sites for such facilities to facilitate acquisition through dedication, transfer of development rights or other appropriate means.
- An adequate water supply and water distribution system should be provided for fire protection services.
- The Regional Stormwater Management Plan should be implemented as identified by the Department of Public Works.

Additional public facilities may be identified as future needs in the Suburban Center. Such facilities are included for informational purposes and in most cases will require a 2232 Review public hearing before the County Planning Commission prior to being established unless they are specifically identified in the Plan text. Those facilities for which a specific location for future construction has been identified are also listed in the land unit recommendations and are considered a feature of the Comprehensive Plan upon review of the Planning Director and concurrence by the Planning Commission. If a feature shown determination is made, these projects will not require a future 2232 Review public hearing.

PARKS AND RECREATION

Existing parks are shown on Figure 9. Parklands located within, or close to, the Dulles Suburban Center currently provide over 1000 acres of public open space with diverse natural, cultural and recreational resources. Three large Countywide Multiple Purpose Parks -- Ellanor C. Lawrence, Frying Pan, and Richard W. Jones -- "anchor" the area on the southern, northeast and southwest corners. Two Heritage Resource Parks -- Sully Historic Site and Frying Pan Meeting House -- are both listed on the Virginia Landmarks Register and the National Register of Historic Places.

The Cub Run Stream Valley, on the western boundary of the Suburban Center, contains some of the most extensive and sensitive natural and cultural resources to be found in the County and is a major wildlife and recreational corridor to the Occoquan River shoreline. The extensive public parkland along this stream valley underscores its importance in the preservation of biological diversity, heritage resources and recreation opportunities. Within the designated Suburban Center area, however, a critical segment in Land Unit H remains vulnerable to the impacts of future adjacent development. Significant archaeological resources are also known to exist within the Cain Branch tributary.

The Dulles Greenway System

The location and distribution of existing open space resources within the Suburban Center provide the framework for a "Dulles Greenway" system of environmental and recreational corridors to conserve and connect valuable natural, cultural, historic and recreational resources at both the local and regional level and to facilitate non-vehicular access to these resources. The Dulles Suburban Center is positioned to become the keystone of a planned Northern Virginia Regional Greenway system connecting the Potomac and Occoquan River shorelines and extending westward through Loudoun County and eastward through Fairfax and Arlington Counties.

The Greenways concept has gained national attention as a result of the recommendation of the President's Commission on Americans Outdoors that "communities identify and establish corridors of private and public lands and waters to provide people with access to open spaces close to where they live and to link together the rural and urban spaces in the landscape." Establishment of Greenways is also a priority in the Virginia Outdoors Plan, which is the basis for allocation of state and federal funding for parks and recreation projects.

Specific objectives of the Dulles Suburban Center Greenway, to be comprised of both public and private lands and waters, are to:

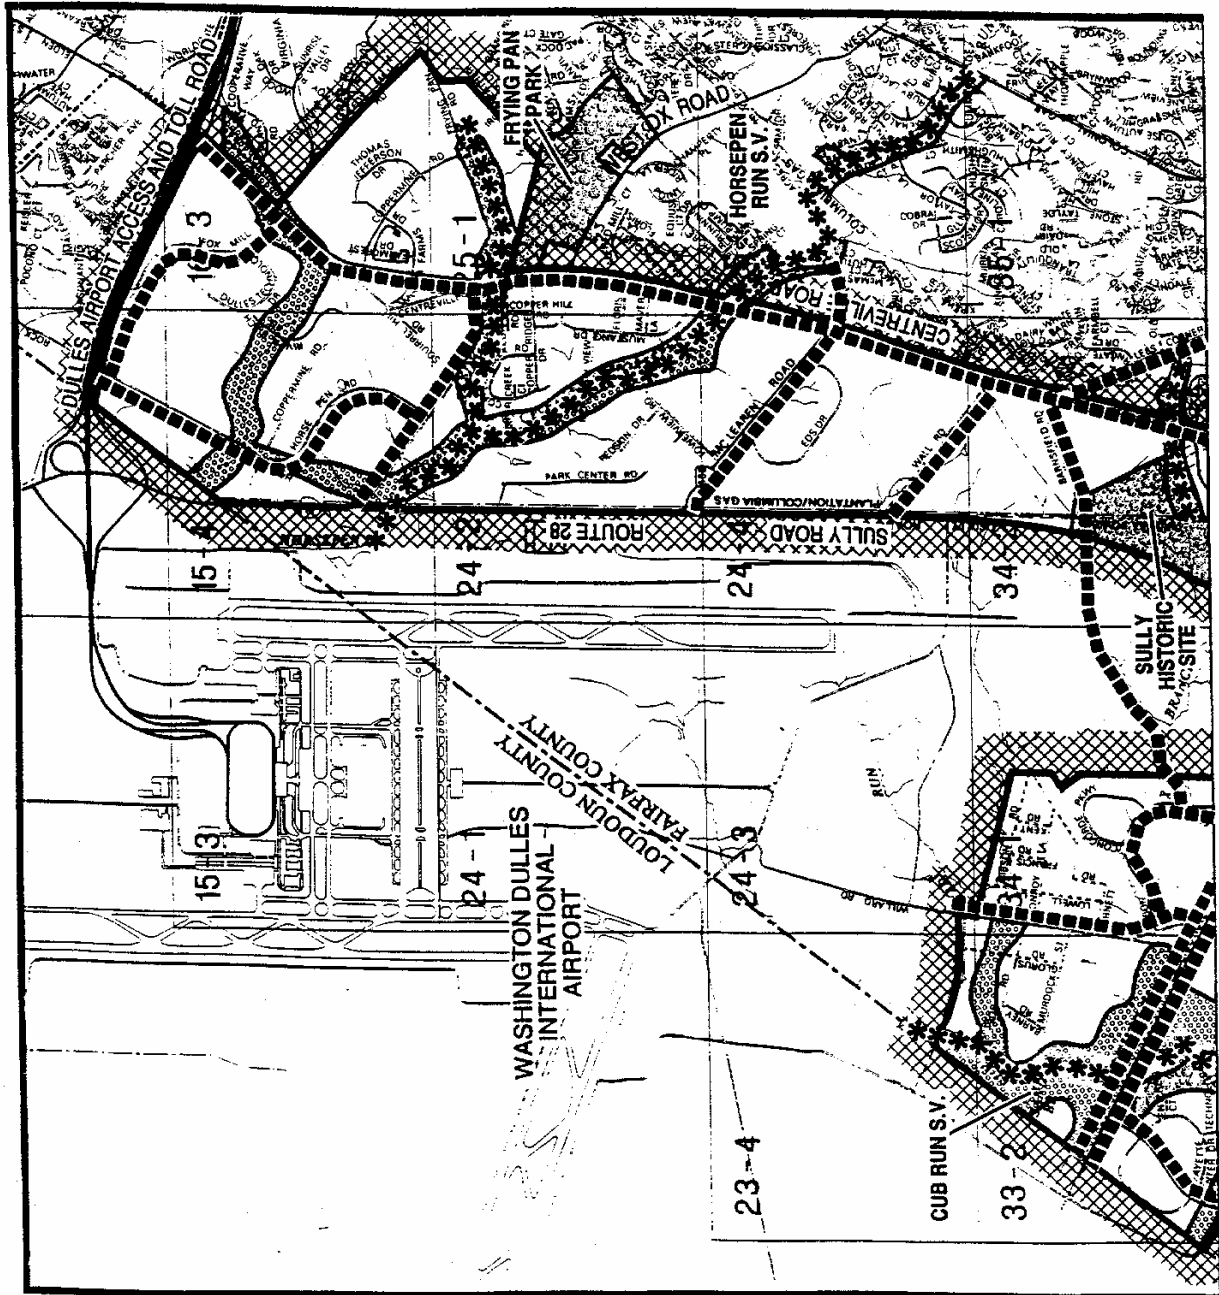

- a. Provide people with access to open spaces and recreational opportunities close to where they live and work;
- b. Protect and enhance ecological and heritage resources;
- c. Provide a continuous pedestrian and open space network linking the places where people live, work and play, both within and adjacent to the Suburban Center; in particular, provide local trails as part of countywide and regional trails and greenway plans; and
- d. Incorporate urban design features where appropriate.

The Greenway as shown on Figure 10 includes the following components:

Major Public Parks within or adjacent to the Dulles Suburban Center include Frying Pan Park, Floris Community Park, Frying Pan Meeting House, Sully Historic Site, Richard W. Jones Park and Ellanor C. Lawrence Park. Stream Valley Park components are discussed below. Additional properties acquired by the Fairfax County Park Authority (FCPA) in the future may be incorporated within the Greenway. Design and development of these properties will be in accordance with FCPA park planning policies and procedures.

Stream Valley Parks include designated Environmental Quality Corridors which, in accordance with County policies, are intended to serve several purposes. Management objectives are defined as follows:

Sensitive Area Corridors. Some or all of a stream valley component may constitute a "genetic corridor" which should be managed primarily to protect and enhance biological diversity and wildlife movement. Contiguous archeological sites should also be incorporated within this component. Disturbance of land should be limited to pedestrian trails located to minimize impacts on sensitive resources. Major portions of the Cub Run and Cain Branch Stream Valley Parks are designated as Sensitive Area Corridors.

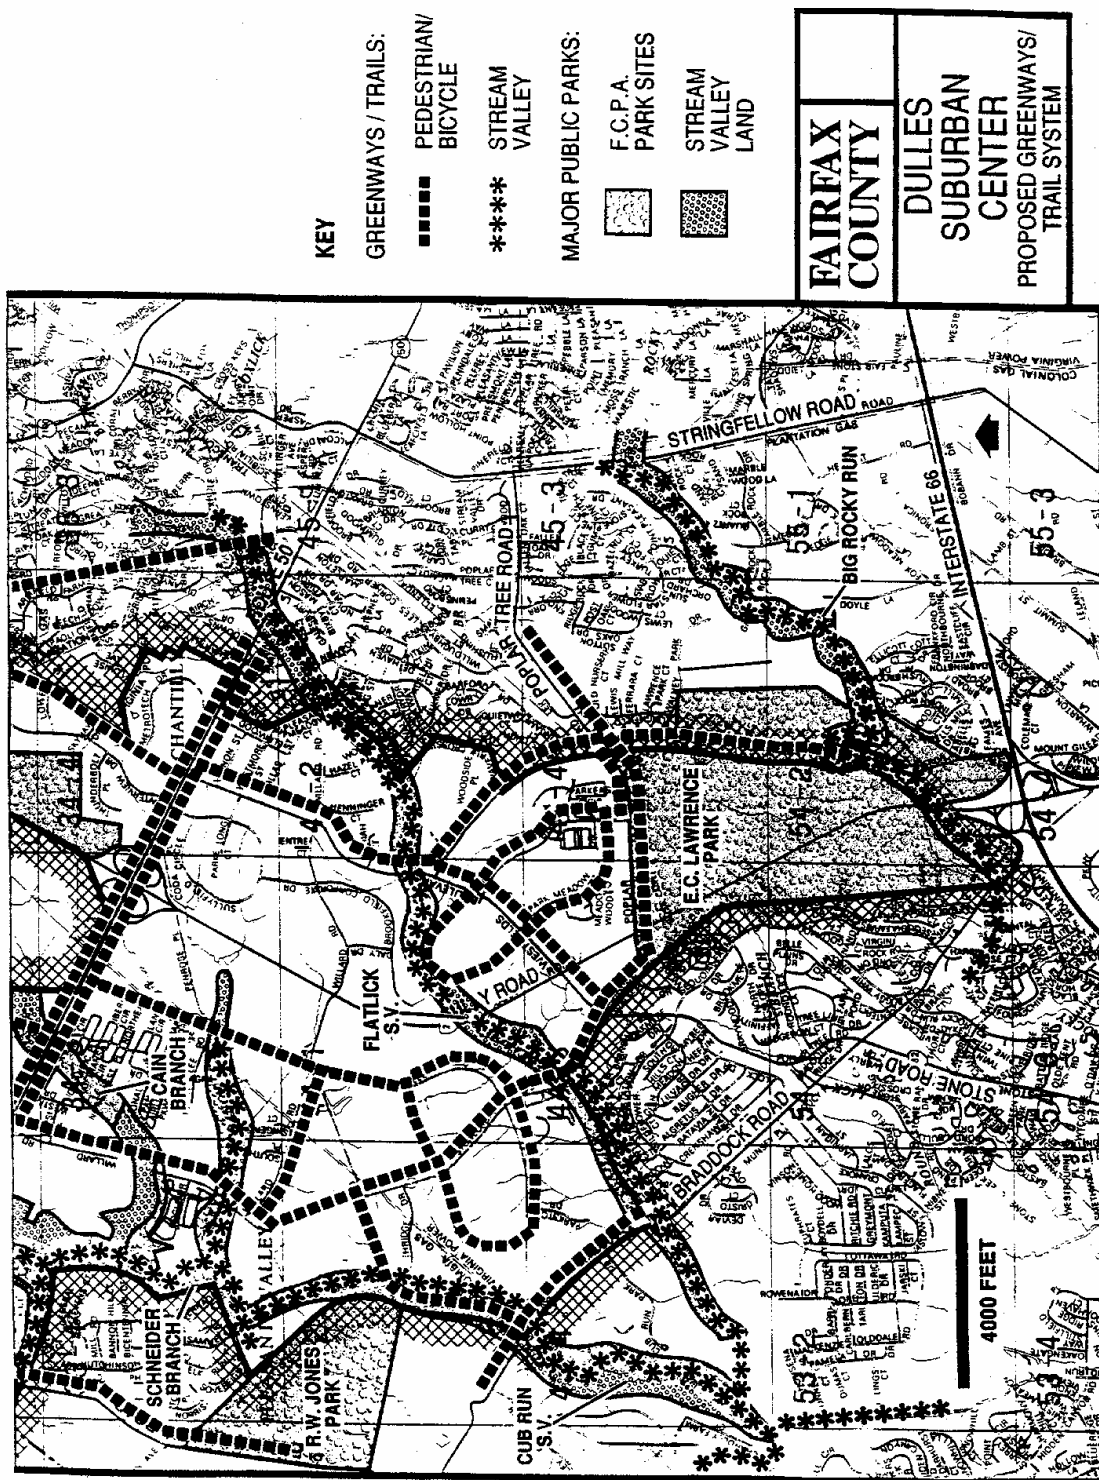

FIGURE 10

Multiple Use Corridors. This component is intended to provide a buffer for designated Sensitive Area Corridors and to afford expanded passive recreation opportunities within the EQC or adjacent to it. Developed facilities may include walking and bicycle trails, seating areas, small picnic or open play areas, interpretive wayside exhibits and landscaping, provided there is no net degradation of water quality or loss of habitat value. Within the Suburban Center, portions of the Frying Pan, Horse Pen, Schneider Branch, Flatlick Stream Valley Parks and Cub Run Stream Valley Park outside the genetic corridor are included in this component.

Countywide Trails: Countywide trails include Stream Valley Park trails which primarily serve a recreational function and Bicycle Transportation/Pedestrian Walkways, which are the principal non-vehicular transportation corridors located adjacent to public roads. These two types of trails are more particularly described in the Trails section.

Urban Parks: Plazas and mini-parks oriented to use by Suburban Center residents, workforce and visitors. Informal activities and programmed events in these areas are intended to enhance leisure opportunities and social interaction. Dulles Corner Central Park is an example of this component; similar facilities are planned for the Westfields complex.

Development of such a greenway system, comprehensively integrated with other land uses, can return significant benefits to both the public and private sector in the Dulles Suburban Center. The positive impacts of carefully and imaginatively planned open space on real estate values, public health, resource preservation, and energy and infrastructure investments make development of the proposed Greenway system an important element in the total environment of this Suburban Center.

Active Recreation

Despite the relatively extensive amount of parkland in the vicinity of the Dulles Suburban Center, there are currently major deficiencies in active recreation facilities in this area of the County. Athletic fields are available at only two locations within the Suburban Center: the planned six field complex at Ellanor C. Lawrence Park and two fields at Floris Elementary School. These facilities are already scheduled to maximum capacity and there remains a large unmet demand from the surrounding residential communities.

The type and intensity of development envisioned for the Suburban Center will generate a strong demand for facilities to serve the adult workforce. Research indicates that:

- Walking and jogging consistently rate as the most popular outdoor adult recreation activity.
- Typically 10-15 percent of the corporate workforce will participate in organized sports activities such as adult softball, football/soccer, and volleyball; and on a daily basis the same proportion of the workforce will utilize a diversified range of indoor and outdoor active and passive recreation facilities. Hence, approximately 20-25 percent of the entire workforce may be expected to utilize recreation facilities if available in proximity to the workplace.
- According to the National Golf Foundation, the Washington D.C. area is among the most poorly served areas in the country when it comes to public golf course holes per capita. The Dulles Suburban Center area represents one of the last areas of Fairfax County with sufficient undeveloped land to meet the existing and projected demand for golf. The proximity of business development further supports the potential for golf facilities in this

area and there are numerous indirect benefits that can be gained by including golf in Suburban Center planning. The provision of a public/private golf course would, for example, preserve open space, help reduce a documented recreational deficiency and possibly increase the value of other properties within the immediate area.

The advantages of integrating outdoor recreation facilities into employment centers are numerous:

- Increased employee satisfaction and productivity as a result of easy access to facilities;
- Potential reduction in peak hour traffic congestion/transportation demand, as employees stay after work hours to play;
- Reduction of impacts from evening active recreation on adjacent residential areas by siting lighted facilities within areas planned for commercial and industrial development;
- Reduced public land acquisition and development costs through cooperative use of parking facilities and interim use of vacant land held for future development; and
- A "critical mass" of users is present to support public and private revenue generating recreation facilities.

The projected levels of growth and development for the Dulles Suburban Center require additional public parkland and facilities to serve this population. In accordance with Policy Plan recommendations, properties are identified within some land units as "pooled sites". These are defined as community serving recreation sites created through public-private land dedication and acquisition to serve residents and workers and to protect significant natural and heritage resources.

The private sector has made a substantial commitment to providing corporate recreation facilities within the Dulles Suburban Center. The urban park developed at Dulles Corner and the extensive trails incorporated within the Westfields development are the types of facilities that are essential to the development of a greenway system. If additional residential land uses are introduced into the Dulles Suburban Center, there will be a need to develop more residentially-oriented Neighborhood and Community Park facilities as well as the Urban Park plazas and other public open spaces prescribed by urban design guidelines.

Recommendations

In view of constraints on public funding for the acquisition and development of park lands in the 1990s, an expanded "toolkit" of joint public and private sector mechanisms for the provision of recreation opportunities and resource protection and enhancement should be explored. These include, but are not limited to, purchase of development rights, wetlands mitigation funds, purchase of land with leaseback arrangements, development of negotiated bidding arrangements and other appropriate mechanisms.

Site specific recommendations for parks and recreation are contained in the Land Unit Recommendations section. Area-wide recommendations for parks and recreation are summarized as follows:

1. Public, private and corporate interests within the designated Dulles Suburban Center and adjacent Fairfax and Loudoun Counties and the Town of Herndon should cooperate in

the development of a Greenway system that serves recreation, environmental and historic preservation, transportation and tourism, and economic vitality in the Dulles area.

2. To insure that long term recreation and resource protection needs will be met, the Fairfax County Park Authority should seek acquisition of additional properties located in Land Units A, D1, D2, D4 and H. A variety of acquisition mechanisms should be utilized to optimize the use of public funding and provide appropriate incentives to property owners to negotiate the transfer of identified properties.
3. The potential for joint public/private sector development of recreation facilities should be explored wherever feasible. These projects could include golf courses, interim and/or permanent athletic fields, and indoor recreation and leisure services facilities in leased space within commercial or industrial structures.
4. Land should be identified and set aside for future public or public/private golf course development; this land could be an integral part of the envisioned Greenway system. Feasibility studies should be conducted to determine the optimum number of, and location for, golf facilities in the Dulles Suburban Center.
5. Private sector development and operation of athletic fields and other active outdoor recreation facilities for employee use should be encouraged in cooperation with the Park Authority.
6. Master planning and detailed site design for outdoor recreation facilities (public and private) should be coordinated with appropriate transportation officials in order to mitigate the impacts of external noise to the extent possible.
7. Phase I Archeological Surveys should be required for all new development in the vicinity of identified and/or likely heritage resource areas.
8. The present Sully Historic District boundaries should be retained except that all of Sully Historic Site property managed by the FCPA should be included within the historic district.
9. The Countywide Trails Plan within the Dulles Suburban Center and surrounding areas should be revised in accordance with the proposed Greenway network of pedestrian trails and walkways.
10. The Fairfax County Park Authority should develop a Parks and Recreation Facilities Requirements Plan for implementation in the Dulles Suburban Center.

TRAILS

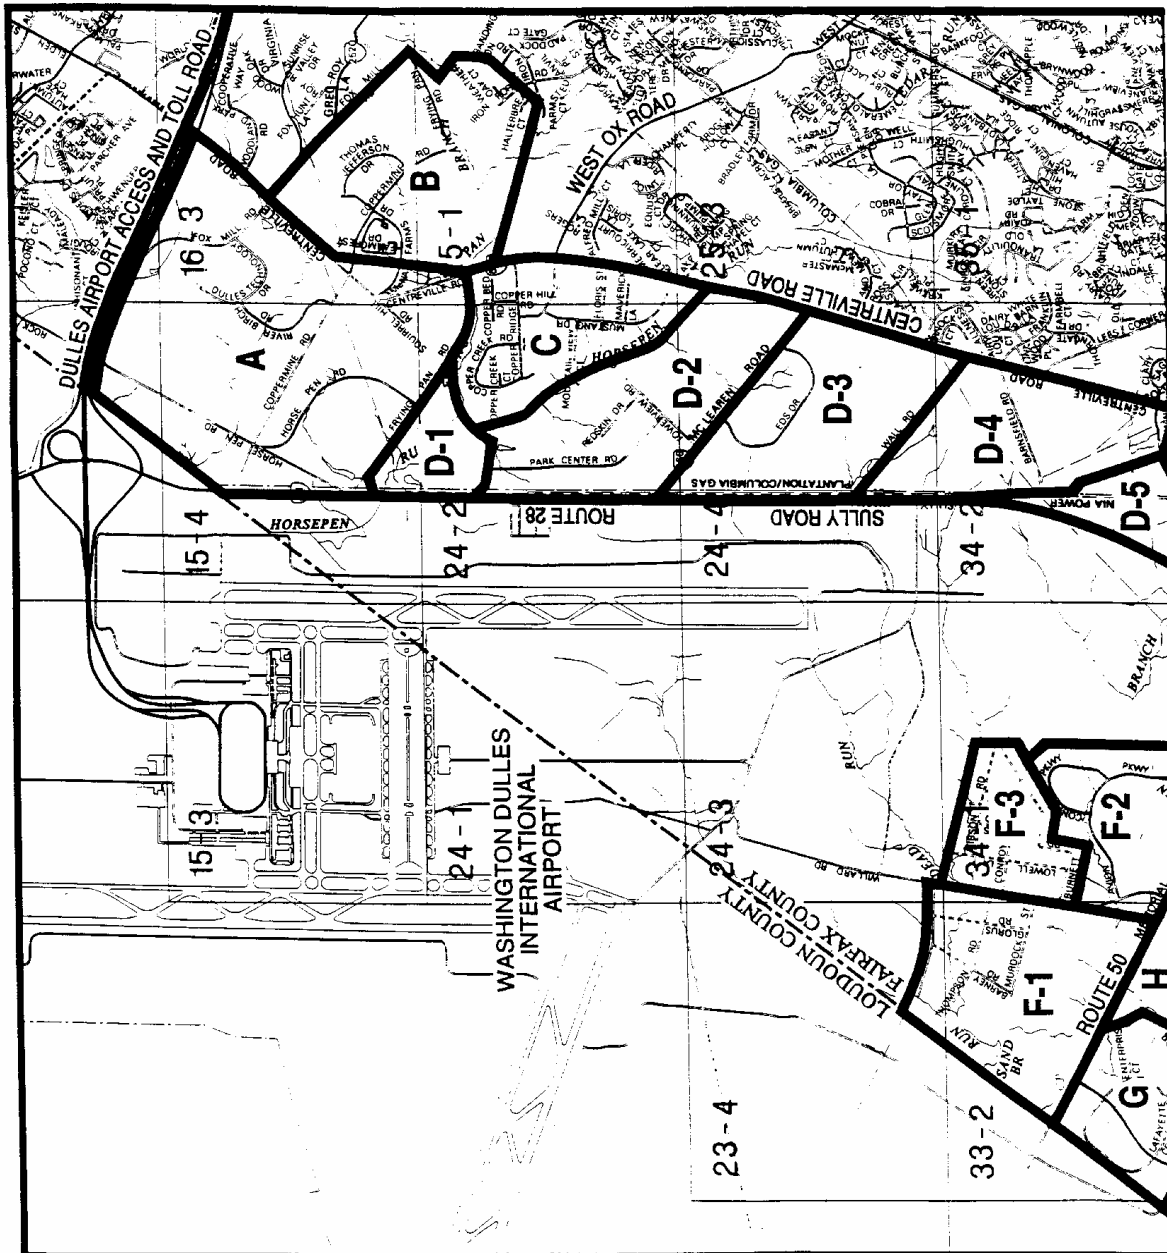

Trails planned for the Dulles Suburban Center are delineated on Figure 10 as part of the Dulles Greenway, the Countywide Trails Plan and the proposed regional greenway system. While some of the segments have already been constructed, the figure portrays the ultimate generalized system for the area. It is expected that development within each land unit will incorporate pedestrian and bicycle access to these main trail routes consistent with urban design guidelines.

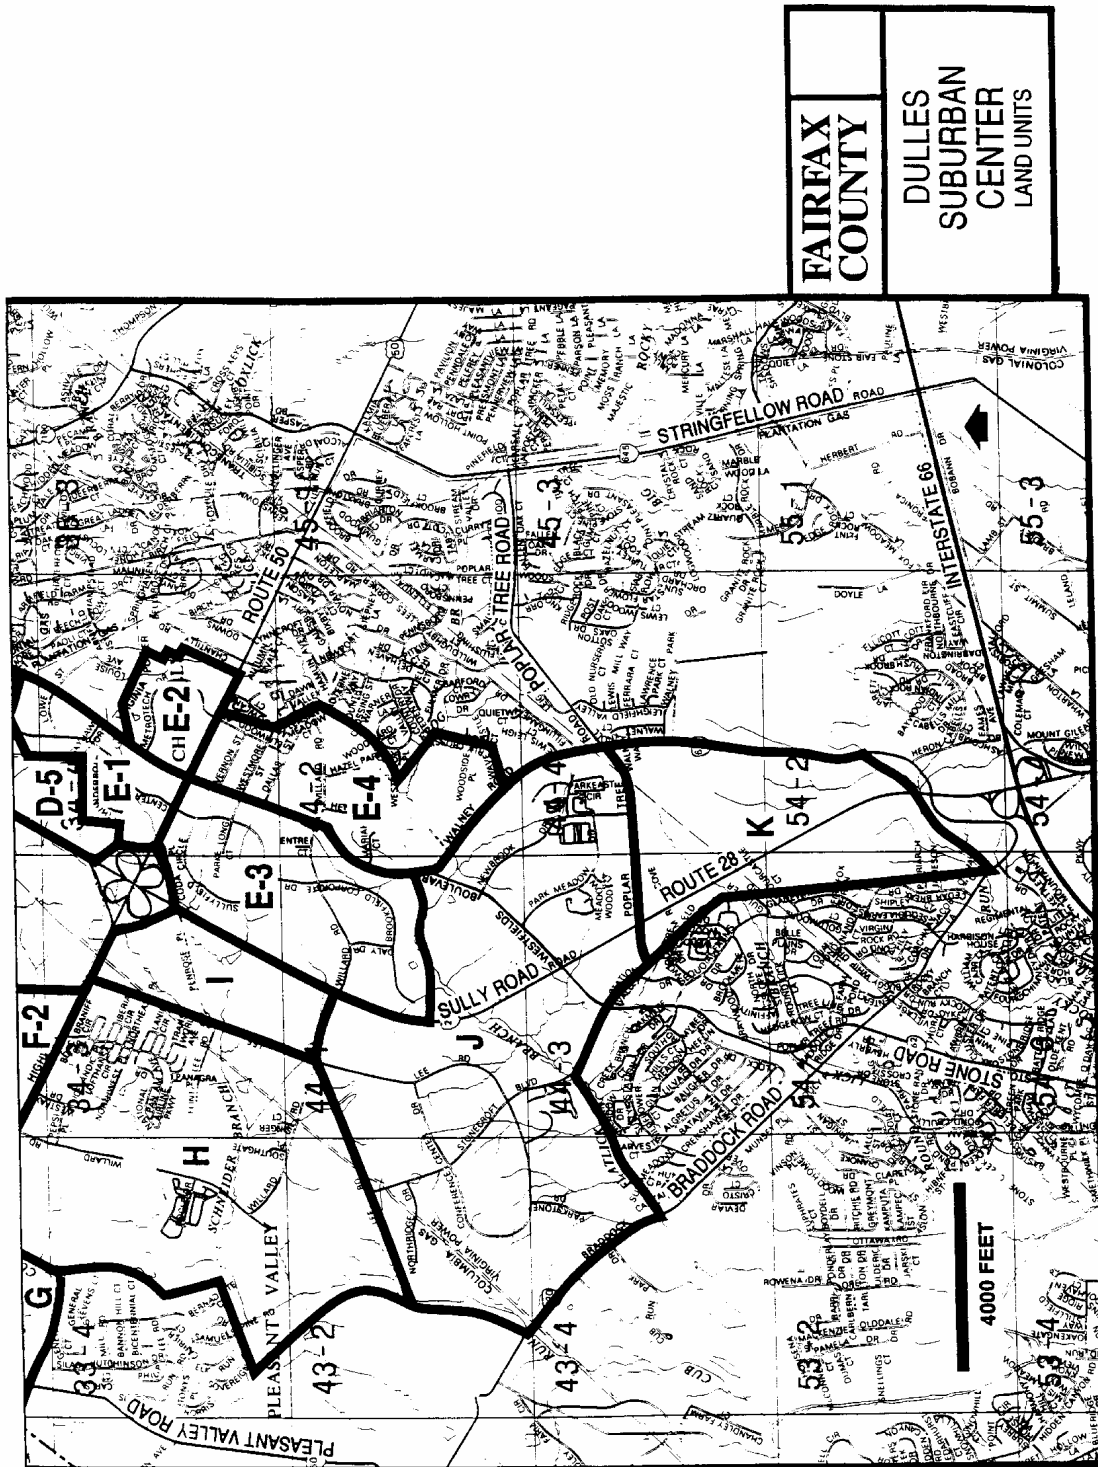

Figure 10 specifies the classification for each trail segment which represents the primary function of that trail. Two categories of trails are identified:

Stream Valley Recreational Trails primarily serve a recreation function, providing non-vehicular access to public parklands and other points of interest. Multiple-purpose trails for both pedestrian and bicycle use may be developed in Multiple Use Corridors. The Fairfax County Park Authority is only responsible for maintenance of trails within public park boundaries.

Bicycle Transportation/Pedestrian Walkways primarily serve a non-vehicular transportation function, linking together employment centers, retail uses and transit areas and nearby public and private open space and recreation facilities. In high density residential and office settings, these trails may therefore serve a dual transportation and recreation function. These "urban pathways" may be developed within VDOT rights-of-way or on private property with public access easements. To the greatest extent possible, urban design features should be incorporated into the development of this Greenway component to provide high quality, visually attractive and functional transportation routes.

An implementation program is included for specific land units, where appropriate, to encourage employees and employers to consider the benefits of short range commuting by cycling or walking to promote such programs. There is an opportunity to provide a definitive character and identity for the Dulles Suburban Center by incorporating a variety of urban design features into the development of this trail classification, provided that mechanisms for their maintenance can be devised.

COUNTY

DULLES
SUBURBAN
CENTER
LAND UNITS

FIGURE 11

DULLES SUBURBAN CENTER LAND UNIT RECOMMENDATIONS

The recommendations which follow provide site-specific guidance for development of the Dulles Suburban Center, over the next 10-20 years and beyond.

In order to fully achieve the vision for the long-term development of the Dulles Suburban Center, implementation mechanisms must be developed to allow for residential development without reducing the tax base of the tax district in the short and long-term; to permit and enhance mixed-use development; and to permit transfer of density within the district without an increase in the overall zoning envelope. Density transfer mechanisms, which could include transfer development rights, concurrent rezonings to effect recommended Plan intensities or other mechanisms not yet identified, are crucial for implementing the envisioned land use pattern of higher intensity nodes of development focused around transit stations and the containment of "suburban sprawl". Exploring options to allow for contributions from residential development in the Tax District or amending the Tax District legislation to do this both in a manner that will not increase the financial burden on other Tax District landowners or the County without their consent, should proceed expeditiously. Development of Zoning Ordinance Amendments to allow for mixed-use development should also proceed. Enabling legislation to allow transfer of development rights should be sought immediately so that this mechanism can be considered as one option, among others, for creating higher intensity nodes of development. Other density transfer mechanisms should also be evaluated for use and enabling legislation sought when needed. This work should proceed to coincide with or follow soon after the completion and adoption of the Enhanced Public Transportation Corridor Study for Route 28 which should identify more specific transit station locations in the Dulles Suburban Center. Since the development of these implementation mechanisms must, of necessity, be a careful and deliberate process, the recommendations that follow do not attempt to outline specific mechanisms or processes.

For the purpose of organizing land use and other site-specific recommendations, the Dulles Suburban Center has been divided into a series of land units. These land units are lettered A through K and are shown on Figure 11. Individual land unit maps are included with the text for each land unit.

In order to achieve the planning objectives for the Dulles Suburban Center it is necessary that new development and redevelopment be responsive to general criteria and site-specific conditions which focus on mitigating potential impacts. Development proposals at the baseline or optional levels must be responsive to the following development criteria, which apply to all sites in the Dulles Suburban Center:

1. Provision of a development plan that provides high quality site and architectural design, streetscaping, urban design and development amenities. High quality site and architectural design will be evaluated in terms of the ability of the proposal to meet the Design Guidelines for the Dulles Suburban Center.
2. Provision of a phasing program which includes on- and off-site public road improvements, or funding of such improvements to accommodate traffic generated by the development. If, at any phase of the development, further mitigation of traffic generated by the development is deemed necessary, provision and implementation of a plan which reduces development traffic to a level deemed satisfactory to the Office of Transportation through Transportation System Management (TSM) strategies and Transportation Demand Management Programs (TDMs).

3. Provision of design, siting, style, scale, and materials compatible with adjacent development and the surrounding community, and which serves to maintain and/or enhance the stability of existing neighborhoods.
4. Provision of affordable housing as a part of any mixed-use project or residential development either through compliance with the Affordable Dwelling Unit Ordinance, if applicable, or an appropriate proffer of units or land or a contribution to the Housing Trust Fund, if the Affordable Dwelling Unit ordinance is not applicable. Affordable housing provided pursuant to such a proffer should be located within the Dulles Suburban Center. Any funds provided in lieu of actual units should be placed in a separate fund for use only within the Dulles Suburban Center.
5. Parcel consolidation and/or coordination of development plans with adjacent development to achieve Comprehensive Plan objectives. Parcel consolidations should be of sufficient size to insure projects that function in a well-designed efficient manner, meet all Plan and Zoning Ordinance requirements for setbacks, screening and buffering and do not preclude the development of unconsolidated parcels in conformance in the Plan.
6. Provision of the highest level of screening and landscaping for all parking.
7. Consolidation of vehicular access points to minimize interference with arterial roadways.
8. Provision of stormwater management by the use of Best Management Practices which contribute to Objectives of this Dulles Suburban Center Plan calling for design of stormwater detention systems that blend with and augment features of the natural environment and contribute to the aesthetics of their sites.
9. Provision of active and passive recreation facilities and specified components of the Greenway system.

In addition to these general development criteria, site-specific conditions may be identified as part of the following recommendations for each of the land units within the Suburban Center.

LAND UNIT A

CHARACTER

This land unit is bounded on the north by the Dulles Airport Access and Toll Road (DAAR), on the east by Centreville Road, on the south by Frying Pan Road, and on the west by Route 28, Washington Dulles International Airport and the Loudoun County line. Land Unit A encompasses the highest planned intensities in the Dulles Suburban Center (Figure 12). Figure 13 illustrates the relationship of the proposed transit station platform, and $\frac{1}{4}$ and $\frac{1}{2}$ mile distances from this station platform, to Land Unit A.

This land unit consists of approximately 645 acres. Existing development includes Dulles Corner, developed with mid- and high-rise office and hotel uses; the low- and mid-rise office uses of the Dulles Technology Center; multi-family residential uses; and a number of single-family attached communities. There is also a substantial amount of vacant land, including a large area of farm land which was formerly in an agricultural and forestal district. The Merrybrook Run Stream Valley traverses the land unit and represents a constraint upon development and a natural open space amenity for the adjacent properties.

Transit improvements are proposed for the DAAR corridor. A Major Investment Study (MIS) completed in 1997 and updated in 1999 recommended a four phase implementation of transit in the Dulles Corridor. The first two phases proposed expanding bus service in the corridor. The third phase would provide Bus Rapid Transit (BRT) service in the corridor and the fourth phase would extend Metro-like rail from the existing Orange Line of the Metro system along the corridor. The MIS recommended a transit station location adjacent to Land Unit A and the northern portion of Land Unit A, located north of Coppermine Road, now comprises the southern half of the Route 28/CIT Transit Station Area (as shown in Figure 13).

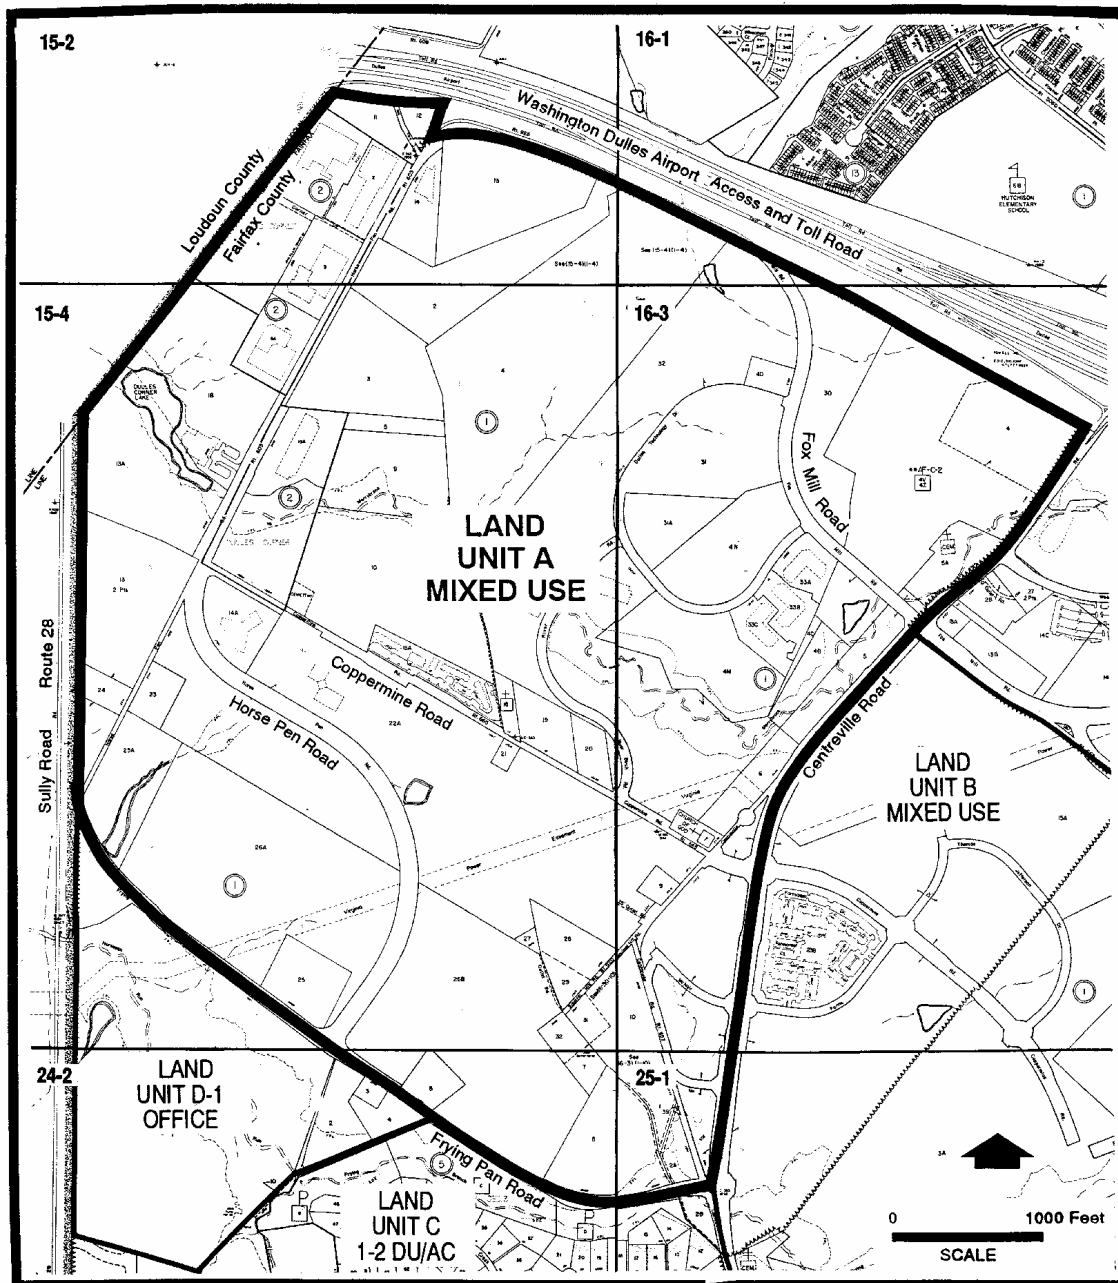

RECOMMENDATIONS

Land Use

General Land Unit Recommendations

This land unit is planned for a complementary mix of land uses including office, hotel and support retail at .50-1.0 FAR, except as may be described in "Other Recommendations." Optional residential uses should be considered as part of mixed-use projects or in accordance with the site-specific and other recommendations set forth below. A cohesive mixture of residential and non-residential uses should provide convenience to those who live and work in the area. Development in this land unit should provide for the incorporation of possible future transit related facilities and pedestrian access to transit.

A core area within Land Unit A is envisioned as a transit station mixed-use area and has been designated as part of the Route 28/CIT Transit Station Area. It includes high density residential uses, of relatively greater land use intensity and urban scale than most other areas in the Dulles Suburban Center. In addition to the higher intensities, the highest urban design standards are envisioned for this area. As planned, this core is large enough for the development of an urban concentration of uses, yet small enough to promote pedestrian circulation throughout the area. The pedestrian network should link the residential areas, community facilities and employment centers to any future transit site. The Urban Design Guidelines in the Reston-Herndon Suburban Center and Transit Station Areas section of the Plan apply to development in the portion of Land Unit A located

LAND UNIT A
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 12

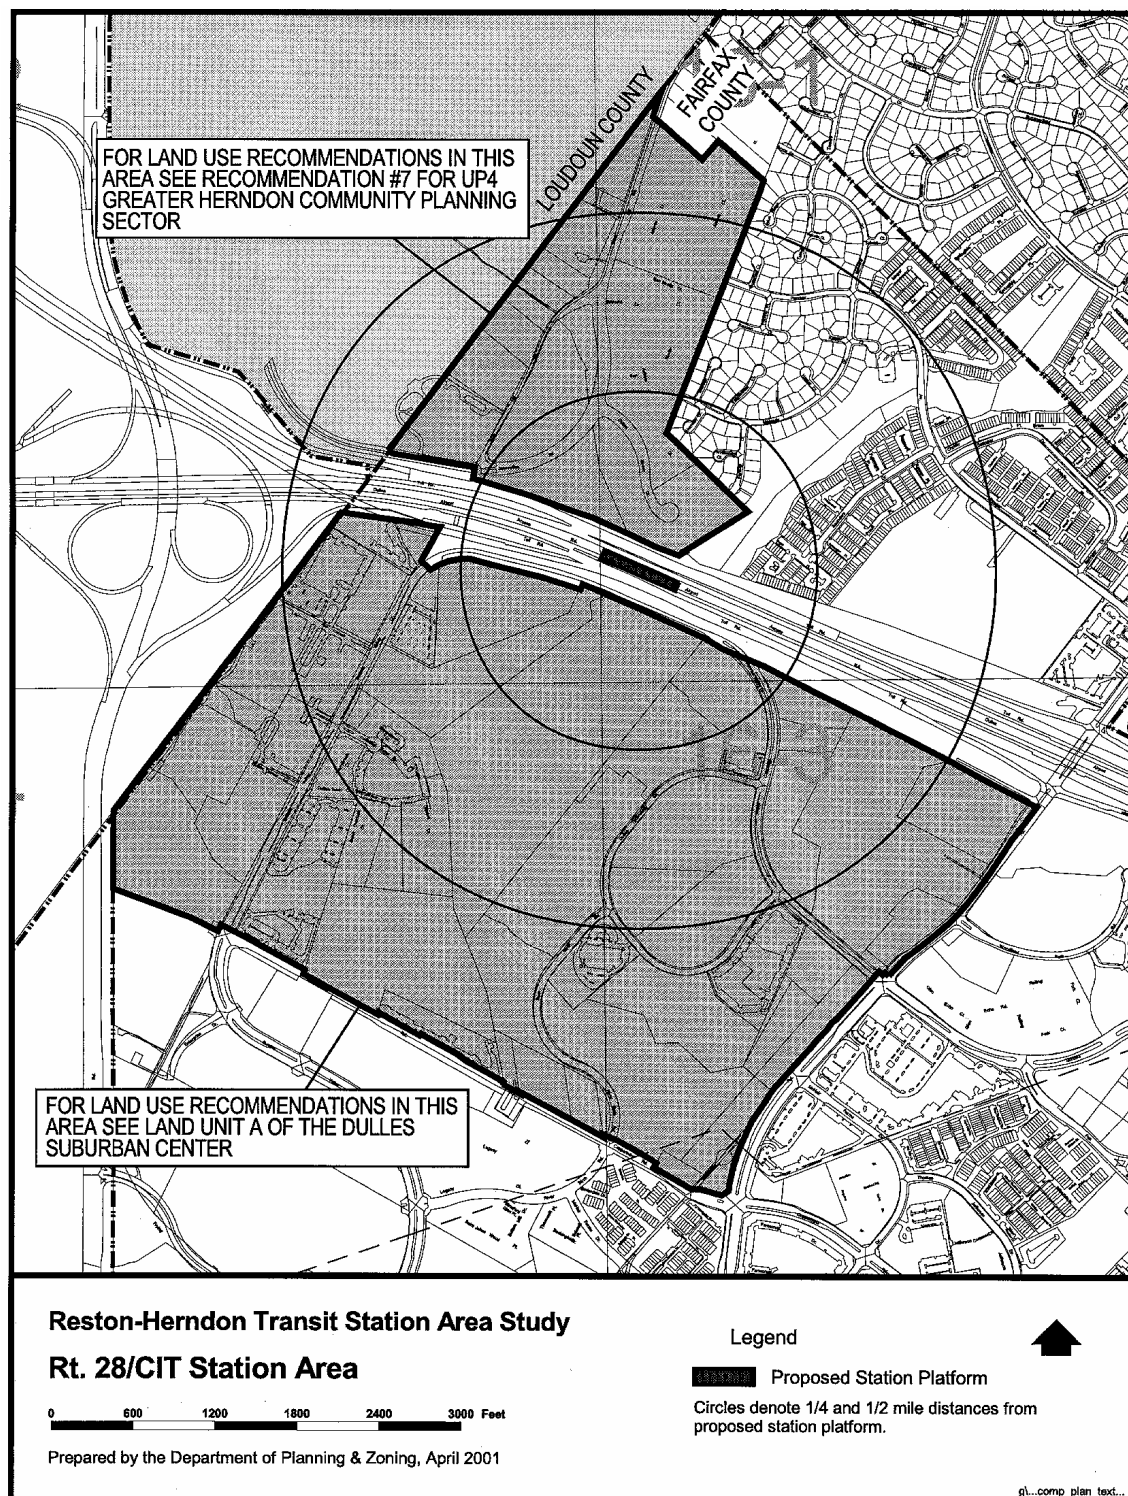

FIGURE 13

north of Coppermine Road.

It is important that mixed-use projects that include residential use be phased to ensure the development of both the residential and non-residential components. This phasing requires that the residential and non-residential components be developed at the same time or that a substantial portion of the non-residential development be in place prior to residential development. All residential components should be of sufficient size to create a viable residential community and to ensure that a high quality living environment can be created through the provision of a well-designed project with active recreation and other site amenities.

In general, development intensities should be highest along Horse Pen Road, the central spine road, and should transition down both at the southern periphery of the land unit defined by Frying Pan Creek and transition toward the northeast to maintain campus office densities in those areas outside of the Route 28/CIT Transit Station Area core.

Core Area Recommendations

Higher intensity development, envisioned as being served by either Bus Rapid Transit (BRT) or Metro-like rail, is an appropriate option within Land Unit A. The higher intensities allowed by this option are only appropriate once a full funding agreement for the Bus Rapid Transit phase of the Dulles Corridor Rapid Transit Project, including funding for construction of stations in the median of the Dulles Airport Access Road, has been signed by the Federal Transit Administration, or once construction of the rail extension in the vicinity of this transit station area has been fully funded for the rail phase. The evaluation of development proposals under this option will be based on the degree to which the following criteria are met:

1. One transit-oriented core should be developed on land that is generally within one-quarter mile of the future transit station. The core of Land Unit A should provide a focal point for development in this land unit.
2. High density residential use should be developed as integral elements of the core. Residential projects should be developed adjacent to the commercial uses, and should help transition into medium density uses away from the core.
3. Land uses supporting day and nighttime activities in the core should be encouraged.
4. Consolidation of parcels or integrated development should be achieved to provide high quality development.
5. Merrybrook Run should be preserved as an integrated element of the Dulles Greenway Open Space system. It should function as a linear park. It may include water features and trails that facilitate pedestrian traffic through the land unit, and which link to the countywide trail system.
6. Supporting retail should be developed as integral elements of developments within the land unit.
7. High urban design standards should be achieved, to include high quality architecture, landscaping and buffering, both internally and along peripheries. Visually attractive streetscapes and other amenities should be provided. Parking facilities should be well screened and buffered.

8. Pedestrian connections between all developments, transit stations and other transit access points should be provided.
9. Provisions for a transit system, including rights-of-way, station(s) and stops, with originating terminus integrated with the DAAR Transit Station, should be made, once a general alignment for a rail transit system has been determined.
10. Development should be phased to transportation system capacity.
11. Land should be allocated for rail transit facilities.

Under this option, mixed-use development, centered around the transit station, is planned to help support the transit system through increased ridership. Within a one-quarter mile radius of the transit station platform, an intensity of 1.5 FAR for mixed-use projects (including office, multi-family residential and support retail) is appropriate. Within a one-half mile radius of the transit station platform, an intensity of 1.25 FAR for mixed-use projects is appropriate. Office use is limited to a .75 FAR under this option. Hotel uses are encouraged.

Should a mechanism be established allowing for the permanent transfer of development rights between parcels, a second option is planned to allow for an overall FAR of up to 3.5 within a radius of a one-quarter mile radius of the transit station platform when the added development is permanently transferred from land already zoned for commercial or industrial development and located in areas between transit nodes in the Route 28 Tax District where lower intensity is planned. The additional intensity should be equally divided between commercial and residential uses.

Development at the optional levels should be allowed only as follows:

- The quality of development, when evaluated using Plan design guidelines, will reinforce the showplace standards envisioned for the Dulles Suburban Center;
- A parking maximum for commercial development in the core should be established at the number of spaces required by office uses at 1.0 FAR in conventional development without public transportation;
- Mixed-use development that includes residential uses should be phased to ensure the development of all uses;
- Residential developments should ensure that a high quality living environment can be created through the provision of well-designed projects with active recreation and other site amenities, and to ensure that small isolated pockets of residential use do not develop within an area planned predominantly for non-residential uses;
- Residential development should be well-buffered from adjoining properties so as not to reduce the feasibility of developing adjacent land in accordance with the non-residential recommendations of the Plan for this area;
- New development should minimize human exposure to unhealthful levels of noise in accordance with the guidance provided by the Policy Plan under Environment Objective 4; and
- Development in Land Unit A should provide for adequate public or privately-owned recreational facilities to serve both employment and residential uses.

Within these areas or adjacent to them, services such as child care facilities may be appropriate to serve these communities.

For both residential and non-residential development, excellence in site planning and design is desirable and expected. It is recommended that usable open space and/or urban parks be incorporated into the design scheme for development in this area. These urban park areas should be oriented to pedestrian and bicycle use by the local work force and residents and provide space for informal or programmed lunchtime and after work events. These areas should be well-landscaped and provide furnishings such as seating and gazebos for public use.

Development within the core area of Land Unit A should be consistent with the Urban Design Guidelines for the Suburban Center Core found at the end of the land unit text for the Dulles Suburban Center.

Other Recommendations

1. Intensities should generally decrease at the eastern and southern edges of this land unit to form appropriate transitions between Land Unit A and the planned and existing development densities of surrounding land uses. Buffering and screening measures should be implemented to protect the integrity of adjacent neighborhoods. Higher intensity development should be oriented away from the stable, single-family residential development in Land Unit C.
2. The approximately 20 acres between Centreville Road realigned and Old Centreville Road in the vicinity of Squirrel Hill Road are planned and approved for office or light industrial use for intensities up to a maximum of .45 FAR. The development provides for substantial off-site road improvements. In addition, properties along existing Centreville Road that are affected by its realignment have been provided with coordinated access to realigned Centreville Road. [See Recommendation #4 for additional guidance pertaining to this area.]
3. Parcel 16-3((1))39, located west of Centreville Road, north of Fox Mill Road and south of the Dulles Airport Access Road, was formerly located within an Agricultural and Forestal District which expired in 1997. It is desirable that this land be acquired for use as a community park to provide active recreation opportunities for employees and residents of the area. Land acquisition and facility development may be achieved through a variety of mechanisms including dedication, donation, or purchase. If the land is not acquired as a park, it is recommended that this land and any adjacent parcels submitted under a common development plan be developed under the conditions outlined above in the General and Core Area Recommendations, and that a minimum of 10 acres be dedicated to the Fairfax County Park Authority to serve the active recreation needs of the employees and residents of the area. As an option, all of the density associated with these parcels may be permanently transferred to the core area of Land Unit A provided that the entire site is dedicated to the Park Authority for Community Park use.
4. Should a mechanism be established by the County to permit residential development within the Tax District or the Tax District be amended to allow for the taxing of residential development without increasing the financial burden on other Tax District landowners or the County without their consent, then as an option, Parcels 15-4((1))22E, 22F, 22G, 22H, and all of 16-3((5)) and 25-1((21)) located south of Coppermine Road, east of Horse Pen Road and west of Centreville Road may be appropriate for a mix of multifamily and townhouse residential development within a density range of 12-16 dwelling units per acre. Residential development should be well-buffered to adjoining properties so as not to reduce the feasibility of adjacent

land developing in accordance with existing zoning and the recommendations of the Plan for this area. Site design should incorporate buffering to the south and west, taking advantage of the existing tree cover for this purpose. To ensure efficient and adequate circulation for this area, a public street connection between Coppermine and Horse Pen Roads should be provided.

Should this optional use be approved through a rezoning to allow for residential use, then similar residential development may be appropriate for adjacent parcels to the south between Horse Pen Road and Old Centreville Road, under the provisions specified above.

5. Parcels 15-4((1))3A, 3B, and 3C are planned for office use at .50-1.0 FAR. Should a mechanism be established by the County to permit residential development within the Tax District or the Tax District be amended to allow for the taxing of residential development without increasing the financial burden on other Tax District landowners or the County without their consent, then as an option, these parcels may be considered for multi-family residential use at 16-20 dwelling units per acre. This option is appropriate only if all three parcels are consolidated and all applicable conditions regarding residential use and the general recommendations for Land Unit A are met, except that transit does not have to be programmed and designed. Residential development should be well-buffered to adjoining properties so as not to reduce the feasibility of adjacent land developing in accordance with existing zoning and the recommendations of the Plan for this area. Site design and architecture should foster the compatible integration of this residential use with the existing office and hotel uses in the immediate area.
6. Parcels 16-3((1))6 and 36 are planned for a complimentary mix of uses at .5 - 1.0 FAR including a combination of office or hotel and retail uses to include eating establishments, financial institutions and other service uses, excluding automobile intensive uses and drive through uses except as may be associated with financial institutions.
7. Parcels 15-4((1))10, 19, 20, 35 and 16-3((1))32B are planned for mixed use at .50-1.0 FAR. As an option, these parcels may be considered for a mix of townhouse and multi-family residential development within a density range of 8-12 dwelling units per acre. This option is appropriate only if all five parcels are consolidated and all applicable conditions regarding residential use and the general recommendations for Land Unit A are met. In addition, the following conditions should be met:
 - Residential development should be well-buffered to adjoining properties so as not to reduce the feasibility of adjacent land developing in accordance with existing zoning and the recommendations of the Plan for this area;
 - Site design and architecture should foster the compatible integration of this residential use with existing office and hotel uses in the immediate area;
 - Provision should be made for the dedication of an elementary school site;
 - Provision should be made for the dedication of the Merrybrook Run Stream Valley;
 - Buildings should be arranged so that they frame and define the fronting streets, and give deliberate form to the street and sidewalk areas; and
 - Development should consist of reasonably sized building clusters oriented to open space areas such as courtyards or plazas to create a desirable neighborhood scale.

Transportation

Bus service linking residential, commercial and employment areas should be provided throughout the day to encourage residents and the workforce to shop and to do business via transit.

Parks and Recreation

1. Community parkland should be acquired either through purchase or dedication. Open space, park and recreation facilities should be acquired to serve employment uses that develop near Dulles Airport.
2. The stream valleys of Horse Pen Run and Frying Pan Branch should be preserved and dedicated to the Fairfax County Park Authority in accordance with the Stream Valley Policy to further development of the Greenway system.

Greenways/Trails

1. A countywide trail should be developed on the west side of Horse Pen Road. This trail should continue along the north side of Frying Pan Road and the east and west sides of Centreville Road.
2. Bicycle racks should be provided at the transit station to encourage bicycle use to and from the station.
3. Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

LAND UNIT B

CHARACTER

Land Unit B consists of approximately 310 acres and is bounded on the west by Centreville Road, on the north by Fox Mill Road, on the south by Floris Community Park and Frying Pan Park, and on the east by the Sycamore Ridge single-family residential community and other land planned for residential use at 2-3 dwelling units per acre (Figure 14).

This land unit contains the McNair Farms multi-family, garden apartments as well as townhouses. In addition, local and community serving commercial uses at the Village Center at Dulles are located at the southeast quadrant of the intersection of Fox Mill and Centreville Roads. Both the apartments and the Village Center are part of a planned mixed-use development to include residential, office and retail uses. Within this land unit there is additional land planned for residential use and a public park.

RECOMMENDATIONS

Land Use

1. The portion of Land Unit B located north and west of Frying Pan Branch (except Parcels 16-3((1))19, 20 and 21) is planned for a mix of residential, commercial retail, office and public park uses and is being developed as McNair Farms. The recommended development is a mixture of residential uses up to 14 dwelling units per acre and a maximum of 327,000 square feet of commercial retail and office use. This mixed-use development is conditioned upon the following:
 - Major highway improvements are constructed. Timing of development and road improvements should be synchronized. No occupancy of the intended uses for this area should occur until over 50 percent of on-site and off-site road improvements are completed;
 - Substantial land consolidation is achieved. The area should be master planned and developed as a contiguous unit;
 - Good urban design principles should be used for development. This includes coordinated vehicular and pedestrian access and circulation; attractive living, working and activity spaces; a variety of housing types; architectural compatibility; landscaping; usable open space, and good visual and functional relationships among the various land uses;
 - A mix of housing styles and types including single and multi-family units, prices and ownership forms is provided. A reasonable number of units must be marketed as rental units and incorporated into the overall design of the project; and
 - Provision is made for sites for day care facilities and an elementary school.
2. The three parcels south of Fox Mill Road (Parcels 16-3((1))19, 20 and 21) that were not incorporated into the planned development for this area are planned for development at 2-3 dwelling units per acre. As an option, residential use at 5-8 dwelling units per acre may be appropriate if the following conditions are met:

- Full consolidation of all three parcels to achieve high quality development;
 - Dedication of adequate land to augment the school site and recreational facilities in conjunction with land planned as part of McNair Farms; and
 - Provision of housing unit types which are compatible with existing and/or planned residential development in the immediate area.
3. Parcels 25-1((14))(6)33-67 and (7)1-32 and B are planned and developed for public park and single-family, detached residential use at 2-3 dwelling units per acre. This will provide for development on this parcel that is compatible with the existing Sycamore Ridge community located to the east.

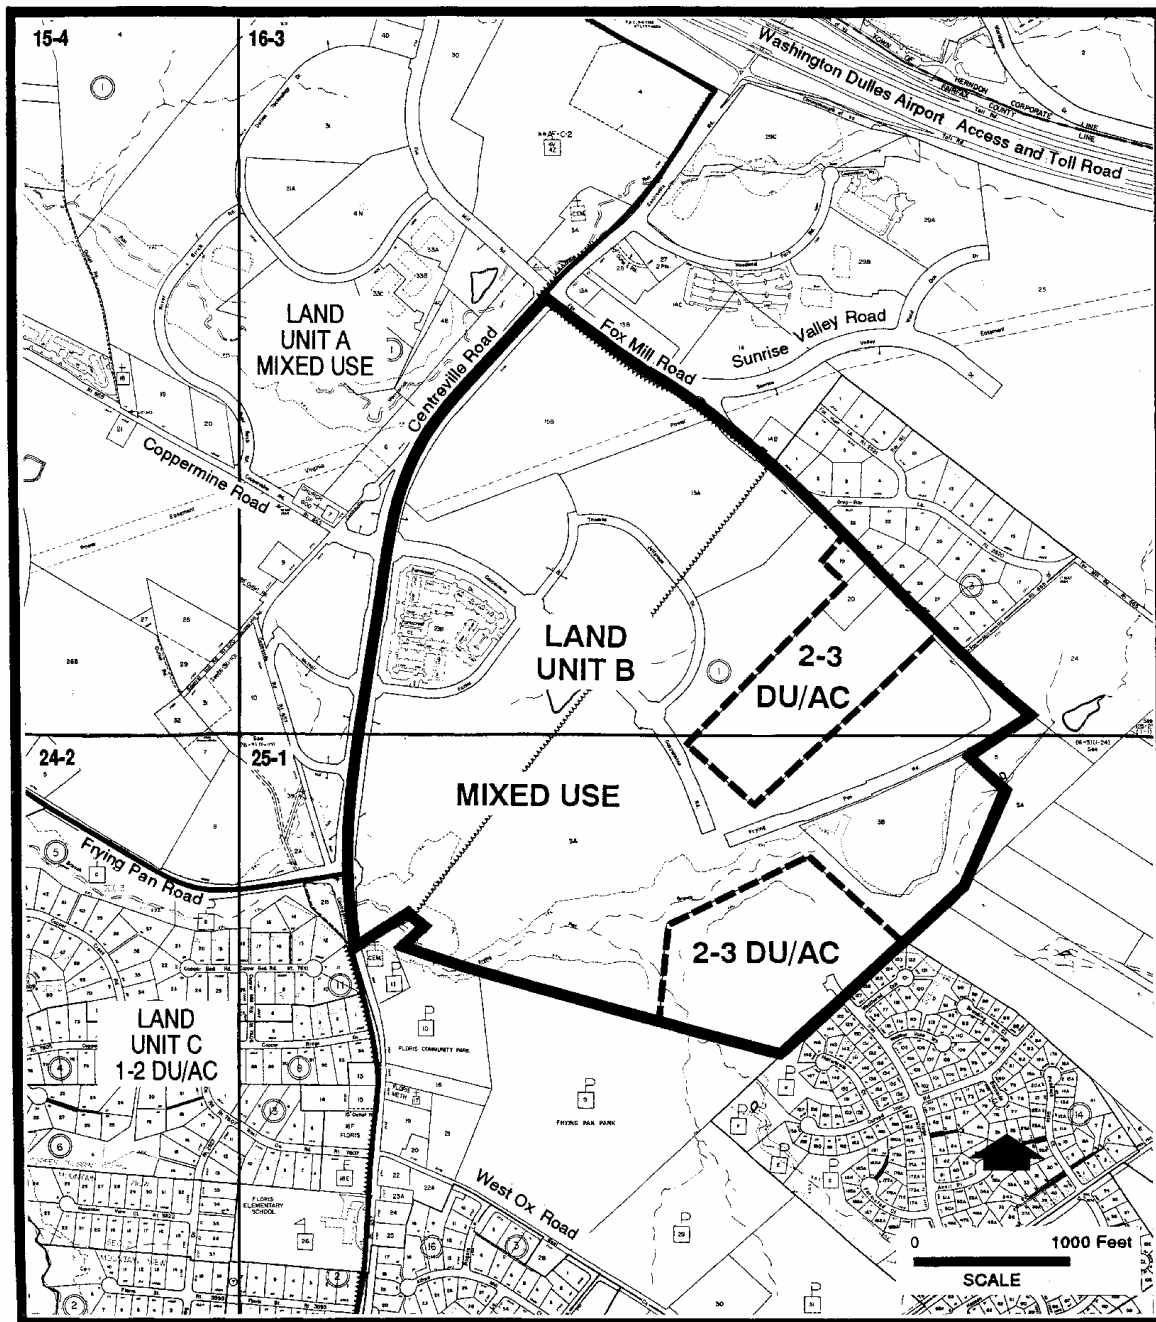

Parks and Recreation

Land Unit B is bordered on the south by Floris Community Park and Frying Pan Park. Frying Pan Meeting House, listed on the Virginia Landmarks Register and the National Register of Historic Places, is located in the northwest corner of Floris Community Park at Centreville Road. Adjacent land uses are planned to be compatible with the historic and agricultural character of these parks.

Greenways/Trails

The Frying Pan Run Stream Valley trail should be extended eastward from Land Units A and C to connect with Fox Mill Road Countywide Trail and then connect to the Monroe Street transit area. The Countywide Trail should extend south on both sides of Centreville Road between Fox Mill Road and West Ox Road to connect with a planned trail along West Ox Road and to the Monroe Street transit area site.

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

LAND UNIT B
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 14

LAND UNIT C

CHARACTER

Land Unit C consists of approximately 210 acres and is bounded on the east by Centreville Road; on the south and west by Horse Pen Run Stream Valley; and on the north and northwest by Frying Pan Branch Stream Valley (Figure 15). This land unit contains the stable, single-family, detached residential developments of Copper Crossing, Kings Grant, Mountain View and Rogers Farm. These residential developments are buffered by the Horse Pen Run Stream Valley which provides a natural transition to the non-residential uses to the north and west in Land Units A and D. Additional development along Centreville Road in Floris includes a small convenience store, a fire and rescue station and the Floris Elementary School. This land unit also contains several undeveloped parcels, generally located in the southern portion.

RECOMMENDATIONS

Land Use

1. This land unit is planned for single-family, detached residential use at 1-2 dwelling units per acre and public park except for Parcels 25-1((1))18E pt. and 26, which are planned for Public Facilities as shown on the Comprehensive Plan Map. Infill development in this stable residential area should be of a compatible use and type and at a density of .5-1 dwelling unit per acre, in accordance with the guidance provided by the Policy Plan under Land Use Objectives 8 and 12.
2. Any enhancement of retail uses in Floris should demonstrate that these changes will be beneficial to the community, accommodate the planned widening of Centreville Road and not adversely impact adjacent, stable residential communities. In general, new retail uses, or expansion of the area currently used for retail uses, is not recommended.

Heritage Resources

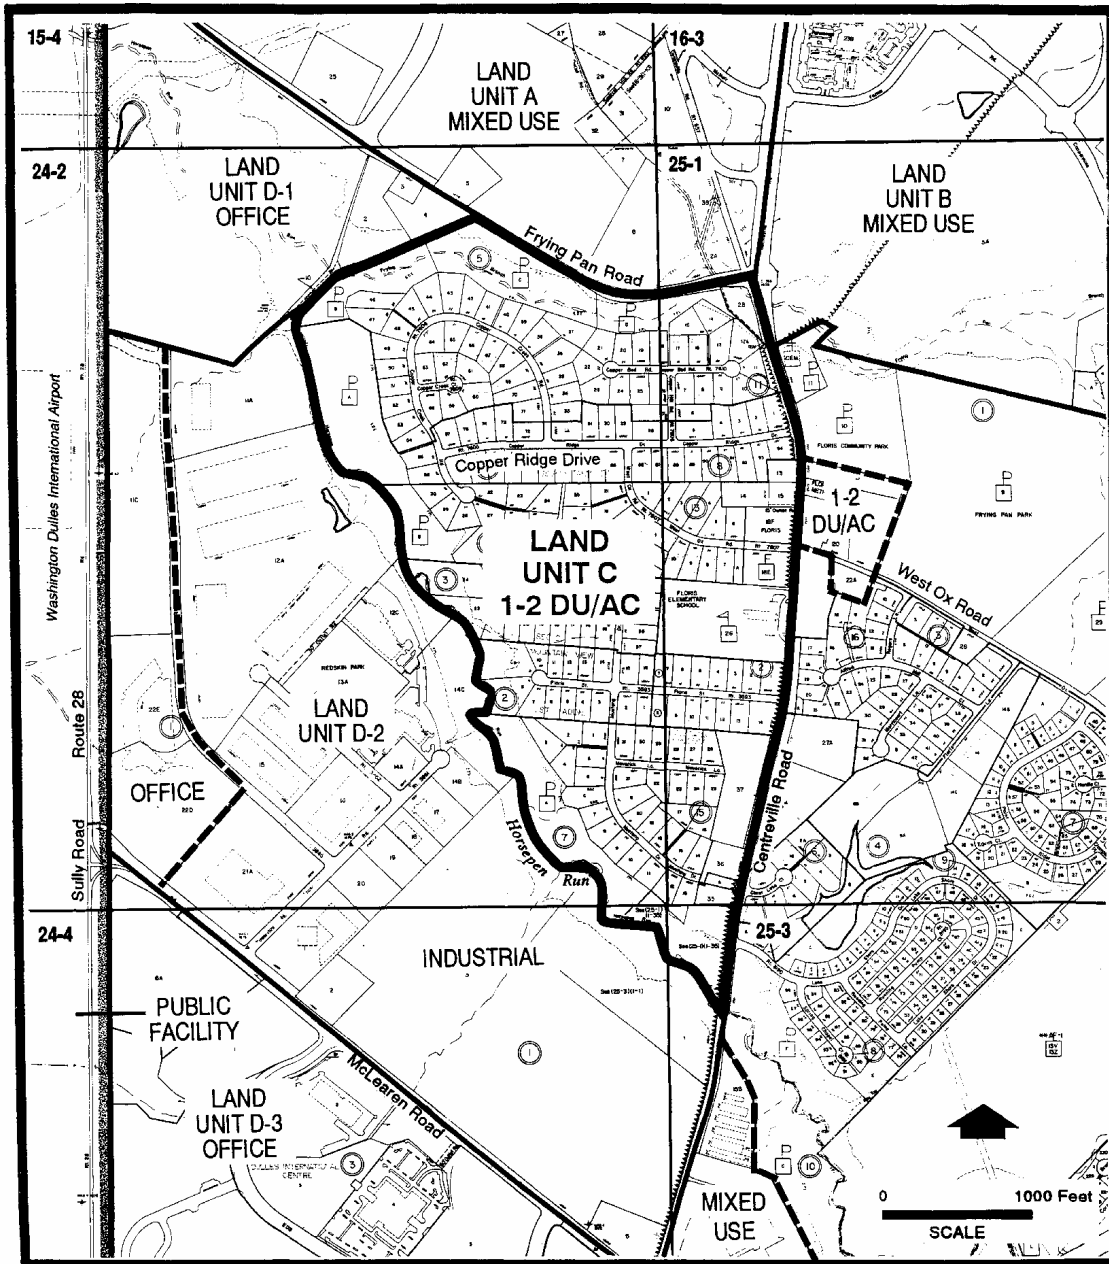

Development should be sensitive to the numerous recorded and unrecorded heritage resources associated with the community of Floris.

Parks and Recreation

1. The Frying Pan Branch and Horse Pen Run Stream Valleys should be dedicated to the Fairfax County Park Authority in accordance with the Stream Valley Policy and to further development of the Greenway system.
2. The athletic fields at Floris Elementary School should be upgraded to serve community needs.

Greenways/Trails

1. Stream Valley Trails through the Frying Pan Branch and Horse Pen Run EQCs along the northern and western boundaries of the land unit should be developed.

LAND UNIT C
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 15

2. A Countywide Trail should be developed on the west side of Centreville Road.
3. Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

LAND UNIT D-1

CHARACTER

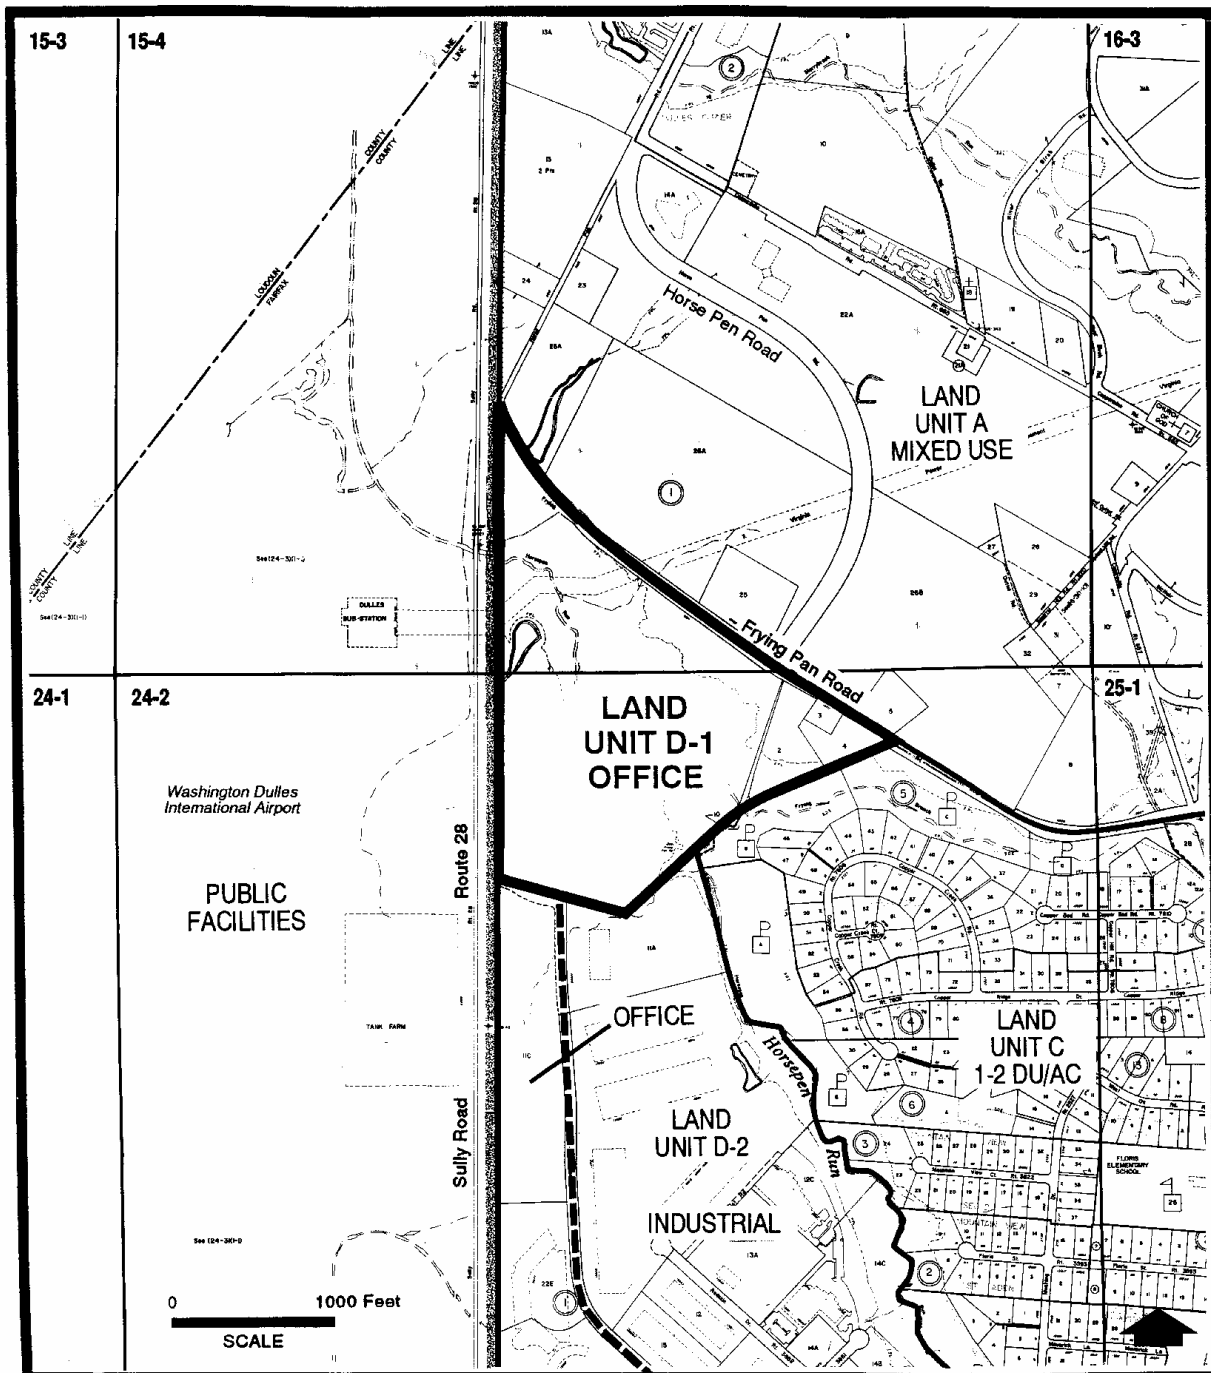

Land Unit D-1 consists of approximately 75 acres and is bounded on the north by Frying Pan Road, the east by Frying Pan Branch Stream Valley Park, on the west by Route 28 and on the south by Land Unit D-2 (Figure 16). Horse Pen Run traverses the land unit, with approximately 50 percent of the land unit within the floodplain of the stream valley. The land unit contains the Middleton Farm and a few other structures and otherwise is not developed.

RECOMMENDATIONS

Land Use

1. The majority of this land unit is part of a working farm. The land unit has a considerable amount of EQC. Horse Pen Run Stream Valley traverses the northern portion of the area and is planned for public park use. Should the agricultural use be discontinued, the land unit is planned for office use up to .15 FAR with dedication of the right-of-way for the planned roadway extension between Park Center Road and Horse Pen Road and dedication of EQC lands to the Fairfax County Park Authority, to provide for development that is compatible with existing and planned adjacent land uses in Land Units D-2 and C.
2. As an option, office use may be appropriate up to .25 FAR with construction of the planned roadway extension between Park Center Road and Horse Pen Road and dedication of the right-of-way for transit and the following additional conditions should be met:
 - Substantial consolidation of all five parcels located within Land Unit D-1 is achieved which provides for the development of any unconsolidated parcels in conformance with the Comprehensive Plan;
 - Development is located south of the Horse Pen Run EQC;
 - All EQCs are dedicated to the Fairfax County Park Authority and the land north of Horse Pen Run Stream Valley is developed for active recreational uses to serve residential and employment uses in the general area. Trails should be provided to connect this area with the development within the remainder of Land Unit D-1. It is also desirable for additional land south of the EQC to be dedicated for active recreation uses to serve the immediate area;
 - Appropriate screening is provided between any office development in this land unit and the existing residential development in Land Unit C to protect these stable residential communities; and
 - A study of heritage resources should be conducted. Preservation, or, at a minimum, recordation of significant heritage resources should occur.

If a transit stop is provided in or adjacent to Land Unit D-1 as a part of the transit system to serve the area, office use may be appropriate up to .35 FAR, if all the above conditions are met

LAND UNIT D-1
 LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 16

and if the density above the .25 FAR is permanently transferred from land already zoned for commercial or industrial development within the Route 28 Tax District where lower intensity is planned.

Hotel and cultural facilities as described in Land Unit D-2, Land Use Recommendation #3, may also be appropriate in this land unit, subject to the conditions for office use outlined above.

Parks and Recreation

The EQC comprised of the confluence of the Horse Pen Run Stream Valley and Frying Pan Branch should be dedicated to the Fairfax County Park Authority in accordance with the Stream Valley Policy and to facilitate development of regional greenway trail linkages and trailhead support facilities. Additional land should be acquired by the Park Authority through cooperative public/private mechanisms for development of Community Park facilities to serve residents in the northern quadrant of the Suburban Center. The amount of land required to meet this additional need will depend on the extent and intensity of development which may be introduced into this area, but sufficient land suitable for development of active recreation facilities should be included.

Greenways/Trails

1. The stream valley trail along Frying Pan Branch should be developed. This trail is planned to connect with the Monroe Street transit area site and north to the Sugarland Run Stream Valley and the Town of Herndon's planned trail system.
2. The stream valley trail along Horse Pen Run should be developed and connect to Land Units C and D-2.
3. Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

LAND UNIT D-2

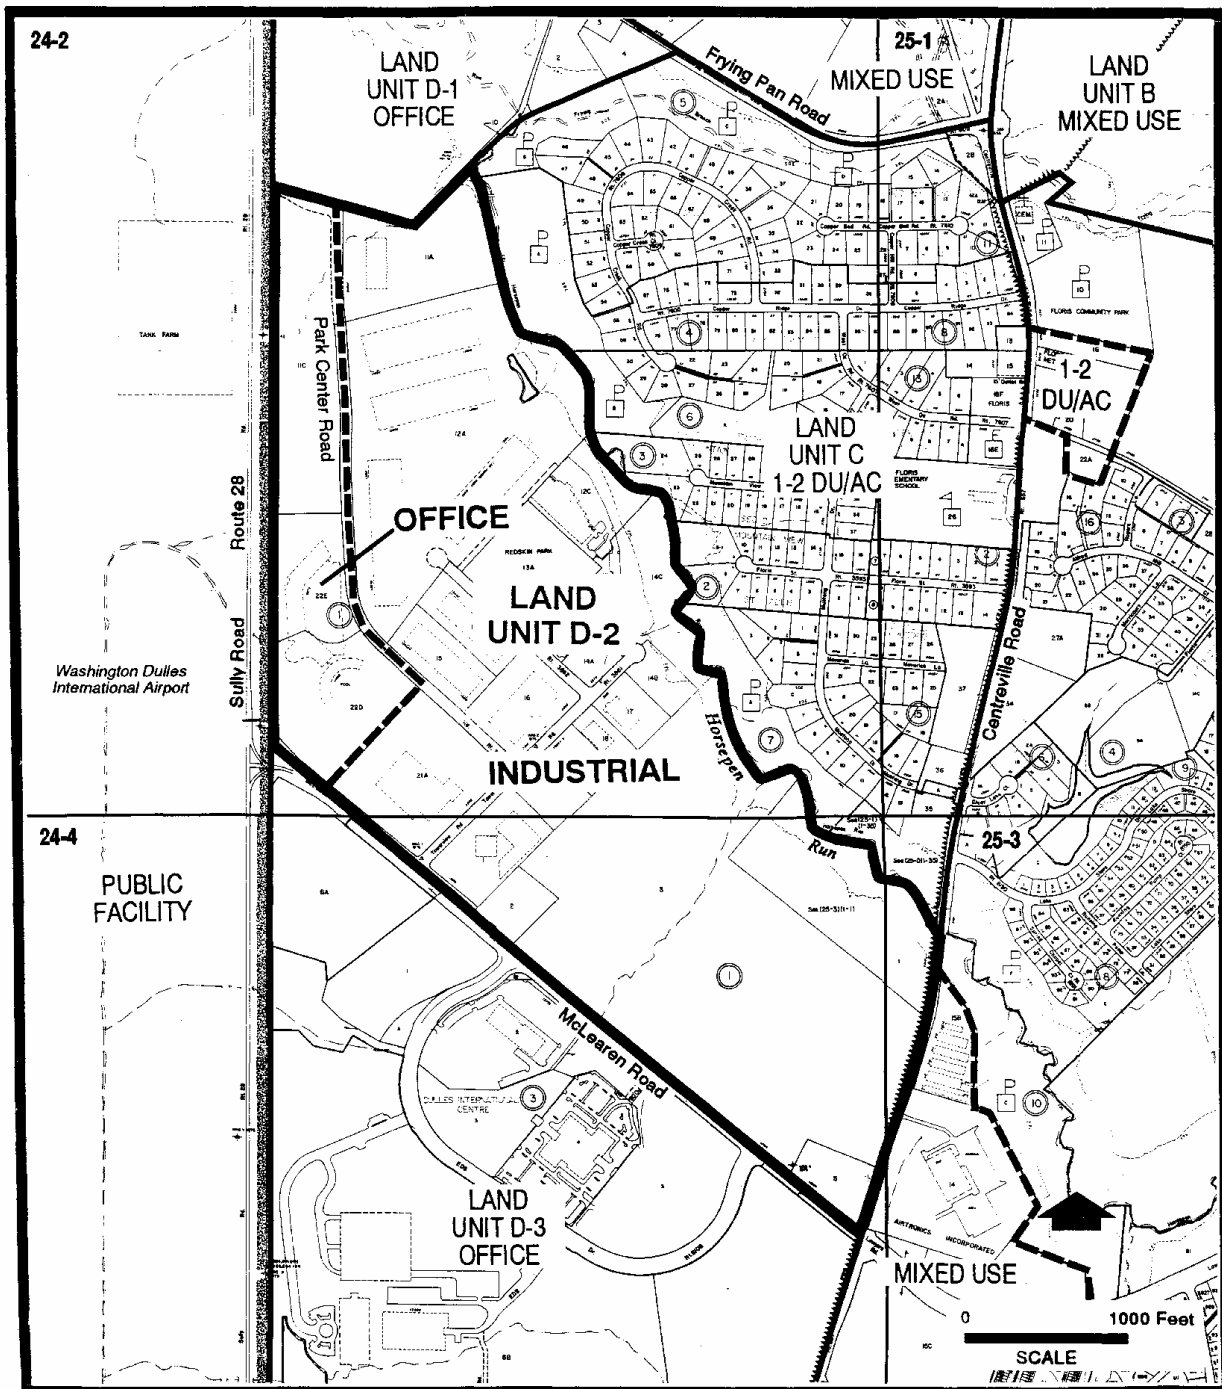

CHARACTER

Land Unit D-2 consists of 275 acres and is bounded on the north by Land Unit D-1, on the west by Route 28, on the east by the Horse Pen Run Stream Valley and Land Unit C, and on the south by McLearen Road (Figure 17). It contains a large concentration of warehouse and industrial hybrid uses, a large hotel and office complex.

RECOMMENDATIONS

Land Use

1. With the exception of Parcels 24-2((1))11C, 22D and 22E located west of Park Center Road and east of Route 28, this land unit is planned for light industrial and industrial/flex uses up to a maximum FAR of .35 to be compatible with existing development. Ancillary retail establishments to the primary industrial and industrial/flex uses may also be appropriate. Within this area, the former "Redskins Park" (Tax Map 24-2((1))13A) contains the practice fields and other related training facilities of the Washington Redskins. It represents a unique feature and amenity within this land unit.
2. Parcel 24-2((1))22D is planned for hotel use up to .75 FAR and contains an existing hotel. Parcel 24-2((1))22E contains an existing office building and is planned for office use. Parcel 24-2((1))11C is planned for office use up to .50 FAR as a transition between the office use to the south and the planned office uses to the north. High quality design is essential for this highly visible location on Route 28.
3. As an option, a mixed-use development to include hotel, conference center, trade or cultural facilities, may be appropriate for the undeveloped land west of Park Center Road. Major business, service, trade and cultural facilities oriented toward international corporate firms should be encouraged. This mixed-use option may be appropriate if the following conditions are met:
 - Uses should be oriented to Route 28 in such a way as to provide an attractive appearance along the corridor in this area;
 - Intensity, scale and height should be compatible with the existing hotel located within this land unit;
 - Retail uses may be incorporated into the development but only as an integral element. No strip commercial uses are recommended, because these would be incompatible with high-quality hotel or conference center uses;
 - Provisions for transit, including rights-of-way, should be incorporated into the design of the development; and
 - The EQC portion of Horse Pen Run Stream Valley should be dedicated to the Fairfax County Park Authority.

LAND UNIT D-2
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 17

4. For parcels 24-4((1))5A, and 5B, a service station and related uses may be appropriate if in keeping with the following:
 - A coordinated development plan should be presented at the time of development for the entire site;
 - Interparcel access should be provided between parcels 24-4((1))3A and 5A and 5B; and
 - Access to the service station is provided in a safe, convenient and efficient manner, and ultimately is restricted to right-turn only movements to and from Centreville Road and McLearen Road at such time as a median has been constructed on these respective roads.
5. As an option, Tax Map 25-3((1))1 may be appropriate for residential use at 4-5 du/ac. The opportunity for residential use on the parcel should not impede the implementation of the Plan's guidance that this land unit be developed for light industrial and industrial/flex uses. Accordingly, the following conditions should be met in order to exercise the residential option:
 - Provide buffering and screening to mitigate impacts such as noise, light and other nuisances from adjacent non-residential uses;
 - Provide a site design that takes into account the adjacent school and possibility of future light industrial and/or industrial/flex uses on proximate parcels and to the extent possible, clusters development away from the southern border; and
 - Dedicate the EQC/RPA to the Board of Supervisors, with possible future dedication to the Fairfax County Park Authority.
6. Horse Pen Run provides a natural transition between the predominantly non-residential uses within this land unit and the single-family detached subdivisions to the east in Land Unit C. This buffer area should be preserved and, where feasible, enhanced.

Transportation

To improve the area road network by alleviating traffic congestion and enhancing traffic safety along McLearen Road between Towerview Road and the proposed interchange of McLearen Road and Route 28, the planned four lane, undivided collector street, Park Center Road, should be extended eastward from its intersection with Towerview Road through lot 24-2((1))20, then curve southward through parcel 24-4((1))3 adjacent to the eastern boundary of lot 24-4((1))2 to intersect McLearen Road opposite its westernmost intersection with EDS Drive.

The 1991 Transportation Plan map should be amended to show the Park Center Road extension.

Parks and Recreation

The County should pursue the purchase or transfer of the former "Redskins Park" to the Fairfax County Park Authority as a way to provide a unique public active recreation resource. Existing indoor and outdoor facilities offer resources that could provide a wide variety of community recreation opportunities. All options for the acquisition of this property, either through fee simple purchase or some form of leasing mechanism, by the Fairfax County Park Authority for public recreational use should be investigated .

Greenways/Trails

Countywide Trails should be developed on the south side of McLearen Road and west side of Centreville Road. Sufficient bike racks should be provided to support non-vehicular access to transit facilities on McLearen Road. A connection should be developed from the McLearen Road Trail, with safe crossing at Centreville Road, to the Countywide Trail on south side of Lawyers Road extended. The Stream Valley trail along Horse Pen Run should be developed to connect, with safe crossing at Centreville Road, with the planned stream valley trail outside the Dulles Suburban Center.

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

LAND UNIT D-3

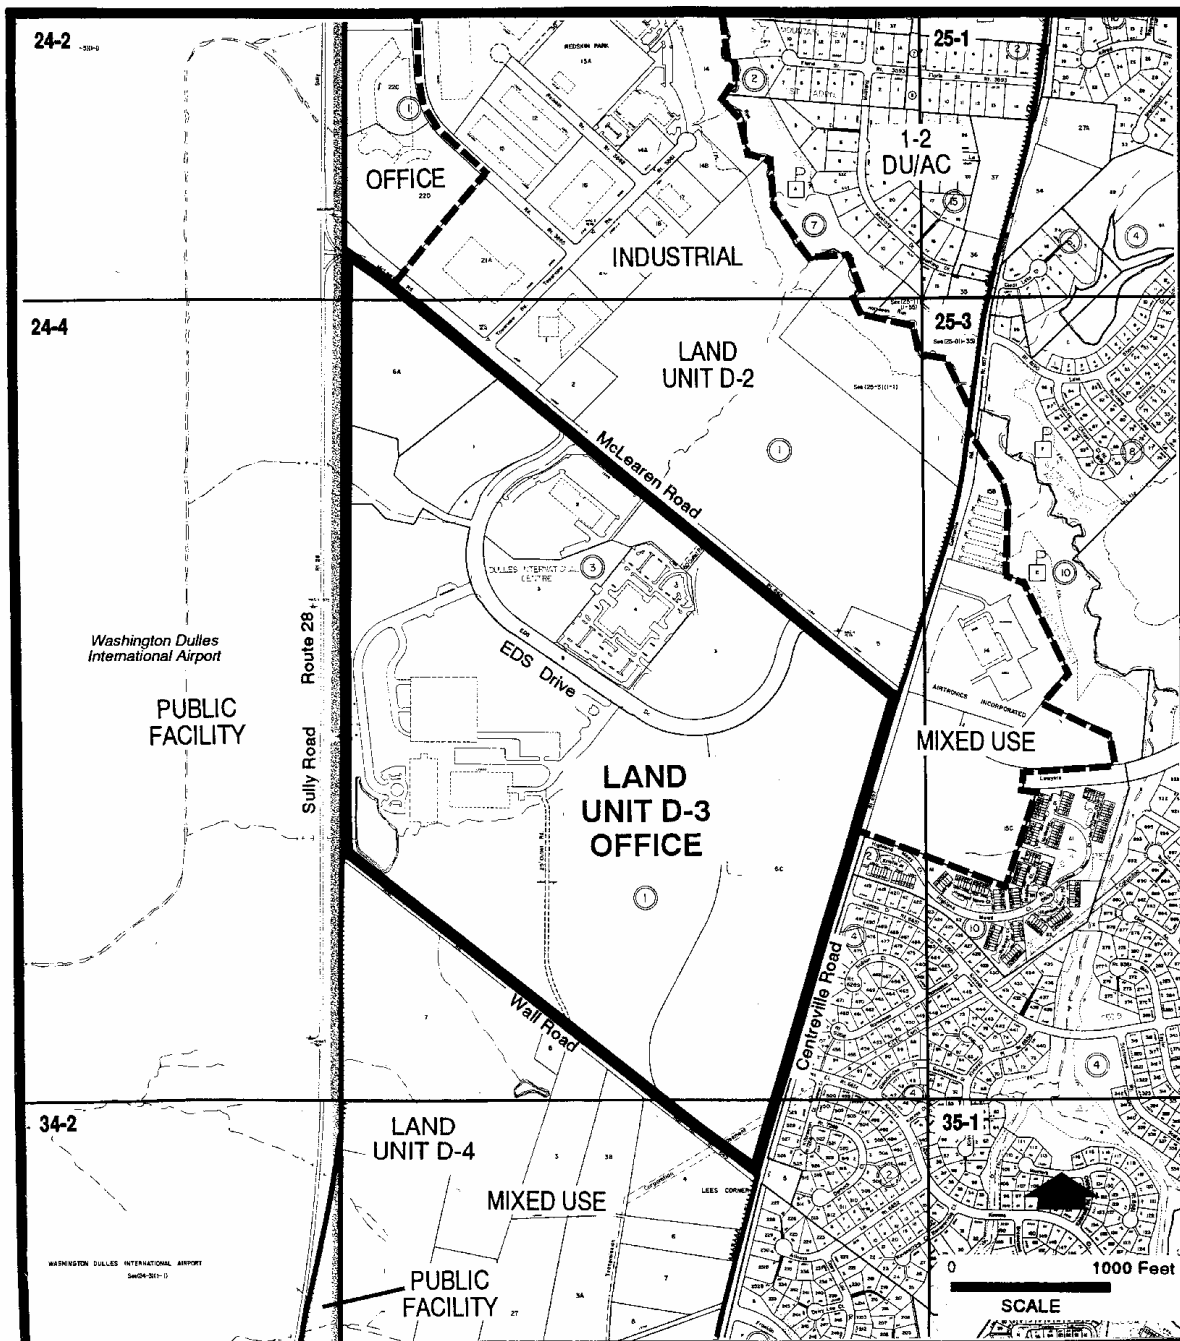

CHARACTER

Land Unit D-3 consists of 260 acres and is bounded on the north by McLearen Road, on the west by Route 28, on the east by Centreville Road and on the south by Wall Road (Figure 18). This area is partially developed with campus-style office development, with approximately two-thirds of the land remaining vacant.

RECOMMENDATIONS

Land Use

1. This land unit is planned and approved for high-quality, campus-style office uses in the range of .50 to 1.0 FAR to promote development that is compatible with similar existing and approved development in this area. Consistent with the higher intensity recommended, the area near the intersection of McLearen Road and Route 28 should be considered as a future transit stop, given its central location and potential as a focal point along the Route 28 corridor. The higher intensity planned for Parcels 24-4((3))1-4 is contingent upon the provision of transit.
2. As an option, a training facility or hotel/conference center may be appropriate if integrated with existing office uses. These optional uses should be oriented away from Centreville Road.
3. Should a mechanism be established by the County to permit residential development within the Tax District or the Tax District be amended to allow for the taxing of residential development without increasing the financial burden on other Tax District landowners or the County without their consent, then residential use should be considered as an appropriate use for portions of this land unit. Multifamily style residential use may be appropriate in the eastern portion of the land unit if:
 - These units directly serve the needs of businesses developing office uses within the land unit and do not include permanent housing for sale. Such services are to consist of, for example, transient housing for personnel in professional training, personnel in transit on corporate business, reassigned personnel awaiting permanent housing, and other similar uses;
 - Residential development provides sufficient buffering between the residential uses and other adjacent uses;
 - Development is well-screened along Centreville Road, including a 100-foot buffer to enhance compatibility with low density residential communities to the east; and
 - On-site active recreation facilities and other amenities are provided.

LAND UNIT D-3
 LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 18

Greenways/Trails

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

LAND UNIT D-4

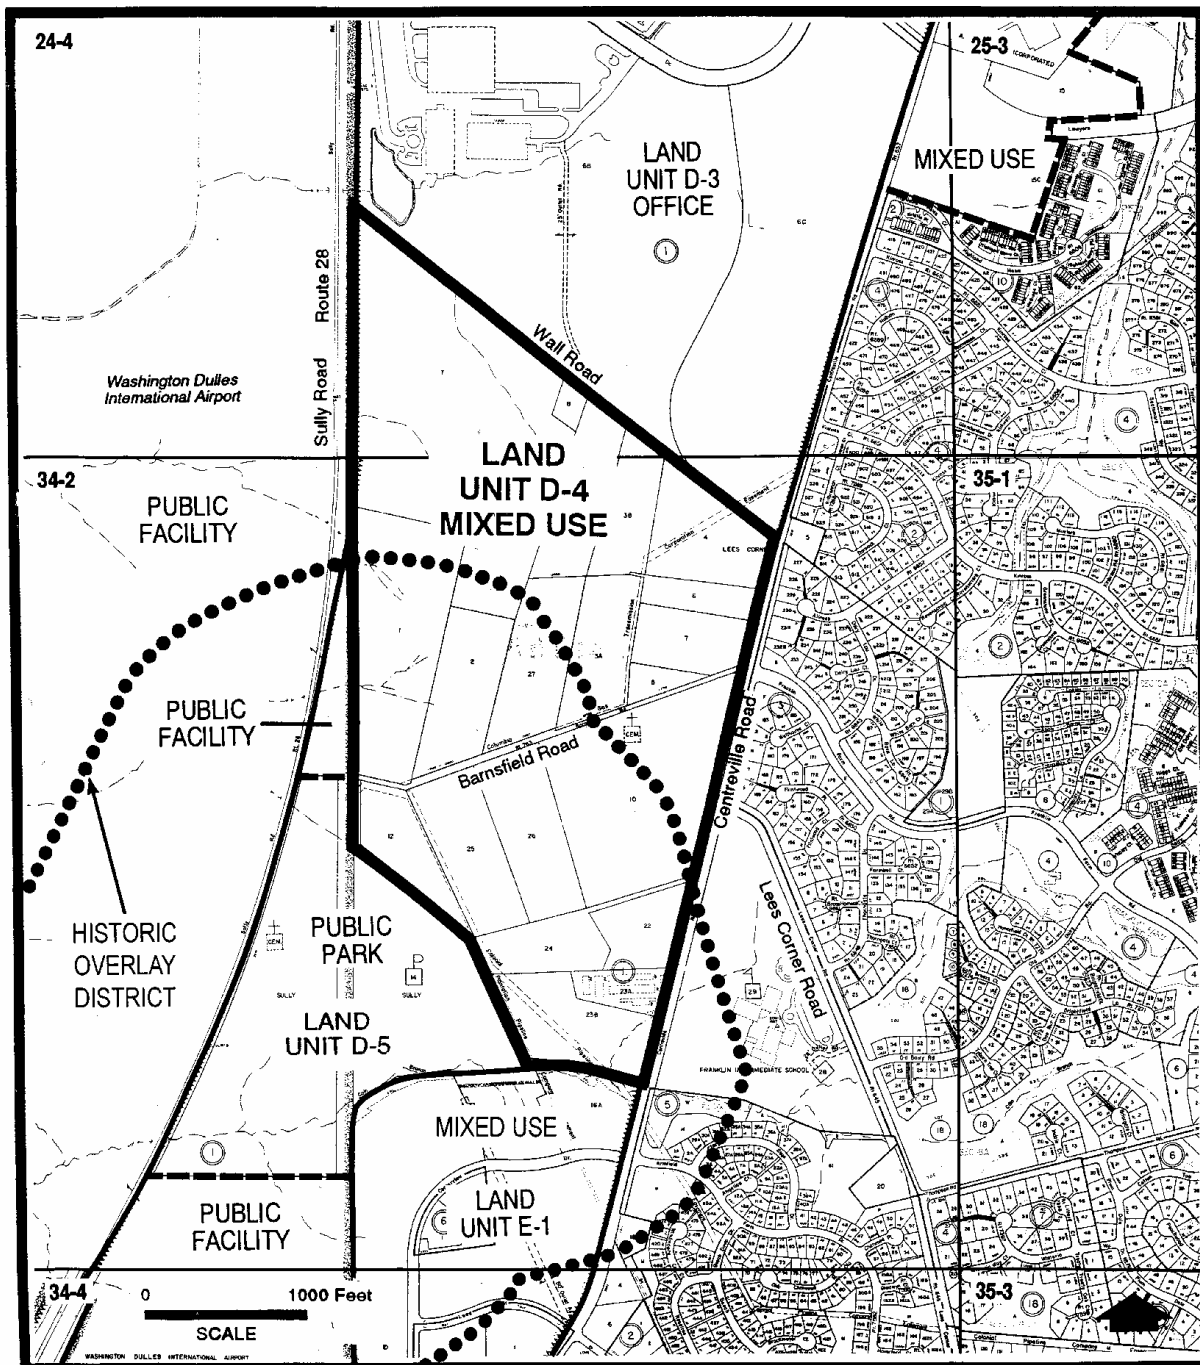

CHARACTER

Land Unit D-4 consists of 157 acres and is bounded on the north by Wall Road, on the west by Route 28, on the southwest and south by the Sully Historic Site Park and on the east by Centreville Road (Figure 19). This land unit contains a portion of the Sully Historic Overlay District, a few scattered warehousing and industrial uses and a large outdoor storage operation north of Barnsfield Road. In addition, about two-thirds of the land unit remains vacant. Cain Branch of Cub Run crosses the southeastern portion of this land unit.

RECOMMENDATIONS

Land Use

1. The southern portion of this land unit lies within the Sully Historic Overlay District. Within this overlay district, certain regulations and restrictions apply to protect the Sully landmark and to control development and uses that would have visual and operational impacts on the Sully complex and its environs. These restrictions and regulations include a prohibition on commercial uses, a limitation on industrial uses to those permitted in the I-4 District, and a limitation on residential uses to single-family, detached units. Other regulations apply and are discussed in Land Unit D-5 with the complete provisions listed in Appendix 1, A1-300 of the Zoning Ordinance.
2. As regulated by the Zoning Ordinance provisions for the Sully historic district, this land unit is planned for high-quality, campus-style office and high-quality industrial/flex uses up to .35 FAR. Retail uses and support services may be appropriate only as secondary or ancillary uses to the office and industrial/flex primary uses. These ancillary service uses should not exceed 20 percent of the primary uses and should be designed to serve the employees and residents of Land Unit D-4. These ancillary and retail uses should not constitute a retail shopping center.
3. As an alternative, Parcel 24-4((1))7A and Parcels 34-2((1))1, 1A, 3, 3B and 10A are planned for a mix of non-residential uses up to .50 FAR that may include office, hotel, retail, cultural, recreation and/or entertainment uses. A visitors center providing information about the attractions in the area, including Sully Plantation and the Air and Space Museum Annex, may also be appropriate on this site. Development proposals should be designed to achieve the following:
 - Retail and other uses that will serve tourists, such as hotel, cultural facilities, restaurants and entertainment uses, should be of high visual and architectural quality and oriented to Route 28;
 - Retail development will not constitute a regional, community or neighborhood shopping center, a regional mall, or a power center;
 - Development should occur in a manner that will minimize impacts on existing residential neighborhoods on the east side of Centreville Road. Mitigation measures will include reducing development intensity and scale along Centreville Road and the use of landscaping and screening to enhance the appearance of the development from

LAND UNIT D-4
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 19

Centreville Road. No freestanding retail sales or service uses will be located within 600 feet of Centreville Road;

- The existing cemeteries located on the subject properties should be preserved;
 - Development of the site will conform with the provisions of the Sully Historic Overlay District. It is noted that implementation of this recommendation may involve a request to revise the Sully Historic Overlay District; and
 - Traffic generated by this alternative should be mitigated.
4. Development of this land unit should incorporate recreation areas to serve employees and nearby residents. Such recreational uses would greatly enhance the attractiveness of this area for private industry and nearby residents as well as complement the Sully Historic Site and district.
 5. As an option, hotel uses may be appropriate in the land unit. These uses should be compatible with planned high-quality office and industrial development and should permit adjacent land to develop in conformance with the recommendations of the Comprehensive Plan.
 6. As an option, a mixed-use development including a golf course or a hotel may be appropriate. Such development should incorporate the conditions of recommendations 3, 4, and 5. If feasible, redevelopment of the existing uses within the Sully Historic Overlay District to become part of a golf course should be encouraged.
 7. Land uses which support southern Dulles Airport Sector development such as the future Smithsonian Air and Space Museum or similar institutions and a future southern terminal should be encouraged. However, access to Dulles Airport and the proposed Air and Space Museum or other facilities should not be allowed to adversely affect and disrupt stable residential neighborhoods.

Development of this land unit should incorporate recreation areas to serve employees and nearby residents. Such recreational uses would greatly enhance the attractiveness of this area for private industry and nearby residents as well as complement the Sully Historic Site and district.

Transportation

Access to the current use on Parcel 34-2((1))23A within the overlay district is to be reoriented to the interparcel access road when the roadway is built.

The Virginia Department of Transportation has approved design of a full, grade-separated interchange to connect Barnsfield Road to Route 28. This interchange will be necessary to accommodate demand at such time as the Smithsonian Institution Annex is built or additional public access is provided to Dulles Airport from Route 28.

It is appropriate to provide principal access from Route 28 for the primary use or either optional use recommended in the Land Use recommendations above. Secondary access should be provided from Centreville and Wall Roads by indirect routing through the land unit. Route 28 should not be directly connected to Centreville Road via an extension of Barnsfield Road without further study and further modification of this Plan. Studies regarding secondary access to Centreville Road should continue to discourage business and commuter traffic from using residential streets of proximate communities located east of Centreville Road.

In the event that substantial development occurs in this land unit before construction of the Barnsfield-Route 28 interchange, interim at-grade access should be permitted to Route 28.

The interchange design provides for a new access to the Sully Historic Site to the south, and termination of the Route 28 median break and traffic signal now serving the Sully site. In the event interim, at-grade access is provided to Route 28 at Barnsfield Road, the traffic analysis should include review of the access to the Sully Historic Site.

Heritage Resources

1. Part of the Sully Historic Overlay District lies within this land unit. Regulations and restrictions for this overlay district are discussed in Land Unit D-5. If there appears to be a conflict between Plan text and the provisions of the Sully Historic Overlay District, the overlay district regulations should be used to determine the appropriate guidance for the development of land within the historic district.

The provisions of the Sully Historic Overlay District have been adopted to protect Sully structures and grounds and to control development and uses that would have visual and operational impacts on the Sully complex and its environs. Residential development within the district is limited to single-family detached units. No commercial uses are permitted. Industrial uses are limited to those permitted in the I-4 District by right, special exception or special permit. The maximum height of freestanding signs should not exceed ten feet and maximum building height is 35 feet. All improvements, to include structures, signs, fences, street furniture, outdoor graphics, and public and private utilities, should be designed and installed to be compatible with the Sully complex in terms of mass, scale, color and visual impact. A planted buffer having a 200 foot minimum is required to be provided along lot lines which are contiguous to the Sully property. All proposed development within the historic district must be reviewed by the Architectural Review Board and should be preceded by an archeological survey.

2. Turley Hall, an historic house, was located within this land unit south of Barnsfield Road. At a minimum, recordation of significant heritage resources on the site is recommended.
3. Development and/or roadway construction must protect the two known cemetery sites along the current Barnsfield Road: the Wilcoxsen family pre-Civil War cemetery and the nearby slave cemetery.
4. Archeological and historical studies should be conducted to determine the relationship between Sully and the Turley Hall site.

Parks and Recreation

It is desirable that development within the Historic District provide for dedication of Parcel 34-2((1))12, or a permanent open space easement thereon, to the Fairfax County Park Authority to ensure protection of Sully Historic Site resources and preserve the original plantation boundary line.

Greenways/Trails

The countywide trail should continue south on the west side of Centreville Road. It may be desirable to provide a pedestrian trail parallel to the Cain Branch Stream Valley eastward to the Benjamin Franklin Intermediate School to provide controlled access for student groups going to Sully.

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

LAND UNIT D-5

CHARACTER

Land Unit D-5 consists of approximately 140 acres and is bounded on the west by Route 28, on the northeast by Land Unit D-4 and substantial amounts of vacant land, and on the south and southeast by Land Unit E-1 (Figure 20). This land unit contains the Sully Historic Site on land owned by the Fairfax County Park Authority and is located entirely within the Sully Historic Overlay District. The remaining area within this land unit is part of the Dulles Airport property. The Park Authority has a formal agreement with the Airport Authority to conduct archeological exploration on approximately 60 acres located within this land unit south of the Park Authority property.

RECOMMENDATIONS

Land Use

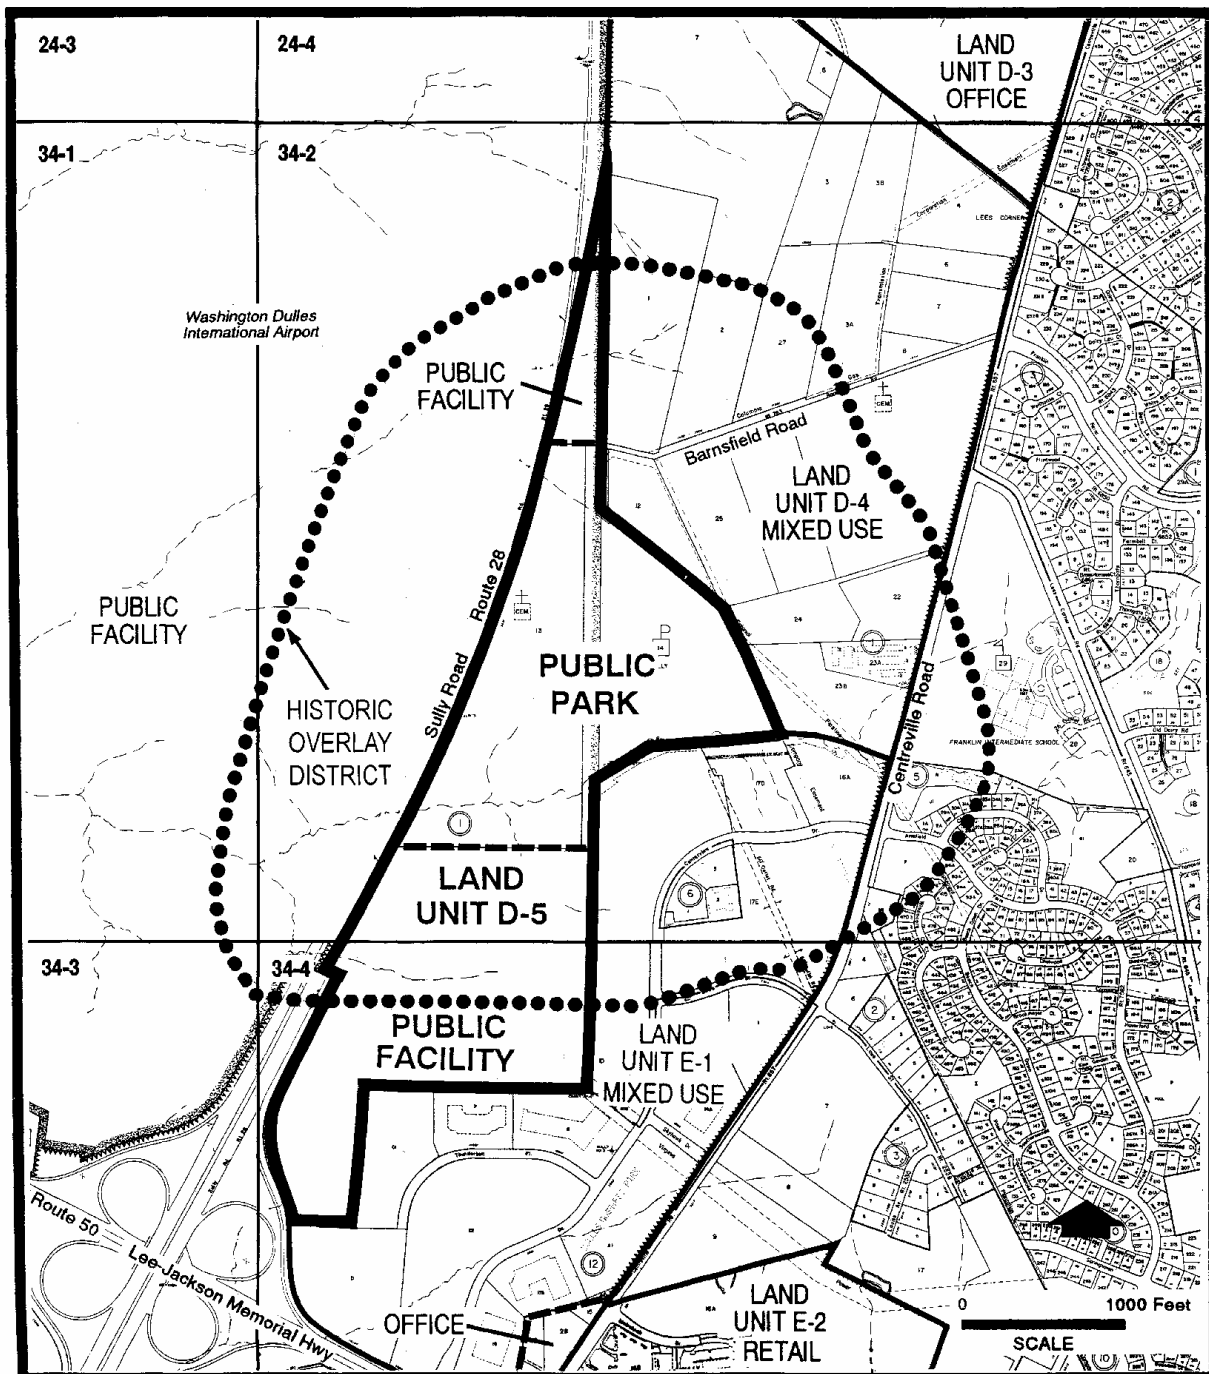

1. This land unit contains the Sully Historic Site and Heritage Resource Park which is listed on both the National Register of Historic Places and the Virginia Landmarks Register. Parcels 34-2((1))13 and 14 are planned for public park uses as shown on the Comprehensive Plan Map. This property is administered by the Fairfax County Park Authority, which operates it as a public Countywide Heritage Resource Park. The land adjacent to Cain Branch south of the park is planned for private open space. The remaining land in this land unit is planned for public facilities, governmental and institutional uses and is part of the Dulles Airport property.
2. This land unit is almost entirely located within the Sully Historic Overlay District and is subject to the provisions of the Sully Historic Overlay District. Regulations and restrictions for this district are discussed below.
3. Land uses which support southern Dulles Airport sector development such as the future Smithsonian Air and Space Museum Annex or similar institutions and a future Dulles Airport southern terminal should be encouraged.

Transportation

Transit should serve the Sully Historic Site and a transit stop is desirable. Any transit facility in the area should be developed in such a way as to mitigate any negative visual impacts on the Sully Historic District.

Heritage Resources

Land Unit D-5 and portions of Land Units D-4 and E-1 are located within the Sully Historic Overlay District. The provisions of the Sully Historic Overlay District (Appendix 1, A1-300, Part 3 of the Zoning Ordinance) have been adopted to protect Sully structures and grounds and to control development and uses that would have visual and operational impacts on the Sully complex and its environs. Residential development within the district is limited to single-family detached units. No

LAND UNIT D-5
 LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 20

commercial uses are permitted. Industrial uses are limited to those permitted in the I-4 District by right, special exception or special permit. The maximum height of freestanding signs should not exceed ten feet and maximum building height is 35 feet. All improvements, to include structures, signs, fences, street furniture, outdoor graphics, and public and private utilities, should be designed and installed to be compatible with the Sully complex in terms of mass, scale, color and visual impact. A planted buffer having a 200 foot minimum is required to be provided along lot lines which are contiguous to the Sully property. All proposed development within the historic district must be reviewed by the Architectural Review Board and should be preceded by an archeological survey.

Parks and Recreation

Complete development of Sully Historic Site, to include a new entrance road from the relocated Barnsfield Road interchange area and the planned visitor information and conference center. Seek conveyance to the Fairfax County Park Authority of all federal land currently administered by the Park Authority under agreement with the Metropolitan Washington Airports Authority.

Conduct archeological and historical studies to determine the relationship of Sully and Turley Hall. If significant Sully-related relationships or artifacts are discovered, seek expansion of Sully Historic Site Park to include appropriate parts of the Turley Hall property.

Greenways/Trails

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

As a critical component of the Greenway system, non-vehicular access should be provided via the countywide trail between Sully and the future Smithsonian Air and Space Museum Annex across Route 28.

LAND UNIT E-1

CHARACTER

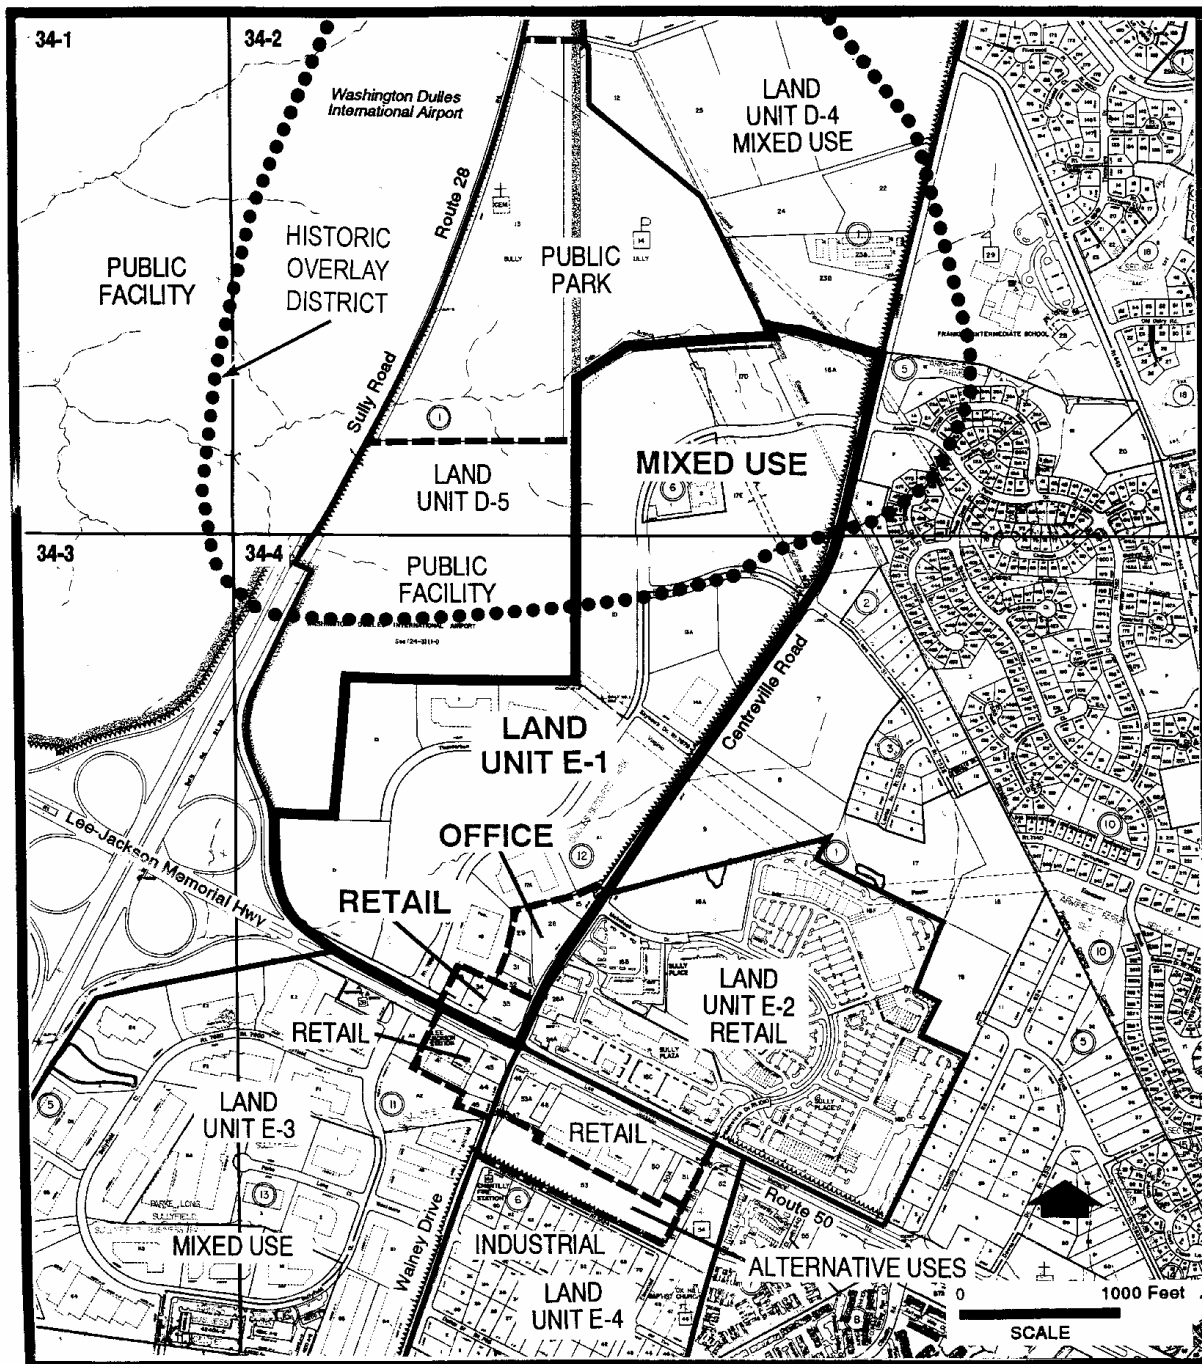

Land Unit E-1 consists of approximately 140 acres and is located in the northwest quadrant of the intersection of Route 50 and Centreville Road. It is bounded on the east by Centreville Road, Sully historic site on the north, Dulles Airport property and Route 28 on the west, and Route 50 on the south. The northern portion of the land unit is within the Sully Historic Overlay District (Figure 21).

Less than 20 percent of Land Unit E-1 was developed as of January 1992. Typical development is office and industrial/flex use and includes the Dulles Business Park. Strip commercial retail use exists adjacent to the intersection of Centreville Road and Route 50. Most of these retail uses will be impacted when planned interchange improvements are made. A motel has recently been constructed adjacent to the retail uses along Route 50. Some land within Land Unit E-1 is located inside the DNL 60 dBA noise contour associated with projected operations at Dulles Airport.

RECOMMENDATIONS

Land Use

1. This land unit, except for parcels 34-4((1))15, 28, 29, 31, 32, 33, 34, 35, is planned for campus-style office, and industrial/flex use up to a maximum FAR of .35 to be compatible with existing development. Ancillary retail use up to 20 percent of the total development may be appropriate within office or industrial/flex buildings. In no event, however, should retail uses be developed as free-standing uses or as a shopping center.
2. Parcels (Tax Map 34-4((1))15, 28, 29, 31 and 32), fronting on Centreville Road are planned for low intensity office use, including medical office, up to a maximum FAR of .25 if 1) all the parcels are consolidated, 2) circulation and access are coordinated, and 3) land is dedicated for the planned interchange, as appropriate. As an option, community-serving retail use may be appropriate if the same conditions are met.
3. Parcels in the northwestern quadrant of the intersection of Route 50 and Centreville Road (Tax Map 34-4((1))33, 34 and 35), fronting on Route 50, are planned for and generally developed with low intensity retail uses at an average FAR of .15. Development on parcel 35 (Chantilly Market) should be contingent on consolidation with at least parcel 34 and access should be via Centerview Drive.
4. Several hotels have been developed in this land unit. Hotel use is appropriate as an option to the office and industrial/flex uses under the following conditions:
 - The hotel use does not have direct access to Route 50 or Centreville Road; and
 - The hotel use will result in fewer peak hour trips than the planned office and industrial/flex uses at .35 FAR, in accordance with the "Performance

LAND UNIT E-1
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 21

Criteria for Optional Uses" found in the Dulles Suburban Center Overview.

5. Much of the land in the vicinity of the intersection of Route 50 and Centreville Road may be used to accommodate the planned interchange, therefore, any development of this area should dedicate land for the interchange as appropriate.

Transportation

If future studies determine that right-of-way is needed in Land Unit E-1 to facilitate development of an integrated transit system for the Dulles Suburban Center, then the needed right-of-way should be provided through dedication, easements or other mechanisms, as appropriate.

Heritage Resources

The Sully Historic Overlay District in the Zoning Ordinance provides development guidance in addition to the land use guidelines stated above in Land Use Recommendations. (See Zoning Ordinance, section A1-300). If there appears to be a conflict between Plan text and the provisions of the Sully Historic Overlay District, the overlay district should be used to determine the appropriate guidance for development of land.

The provisions of the Sully Historic Overlay District have been adopted to protect Sully structures and grounds and to control development and uses that would have visual and operational impacts on the Sully complex and its environs. Residential development within the district is limited to single-family detached units. No commercial uses are permitted. Industrial uses are limited to those permitted in the I-4 District by right, special exception or special permit. The maximum height of freestanding signs should not exceed ten feet and maximum building height is 35 feet. All improvements, to include structures, signs, fences, street furniture, outdoor graphics, and public and private utilities, should be designed and installed to be compatible with the Sully complex in terms of mass, scale, color and visual impact. A planted buffer having a 200 foot minimum is required to be provided along lot lines which are contiguous to the Sully property. All proposed development within the historic district must be reviewed by the Architectural Review Board and should be preceded by an archeological survey.

Greenways/Trails

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

The Countywide Trail should be developed along the west side of Centreville Road and along the north side of Route 50. Connections should be provided across Route 28 to enhance the continuity of non-vehicular circulation across Route 28 and along Route 50.

As a critical component of the Greenway system, non-vehicular access should be provided via the Countywide trail across Route 50 to Sully and the future Smithsonian Air and Space Museum Annex.

LAND UNIT E-2

CHARACTER

Land Unit E-2 consists of approximately 85 acres and is located in the northeast quadrant of the intersection of Centreville Road and Route 50. It is developed in retail use and includes the Sully Plaza and Sully Place Shopping Centers (Figure 22).

RECOMMENDATIONS

Land Use

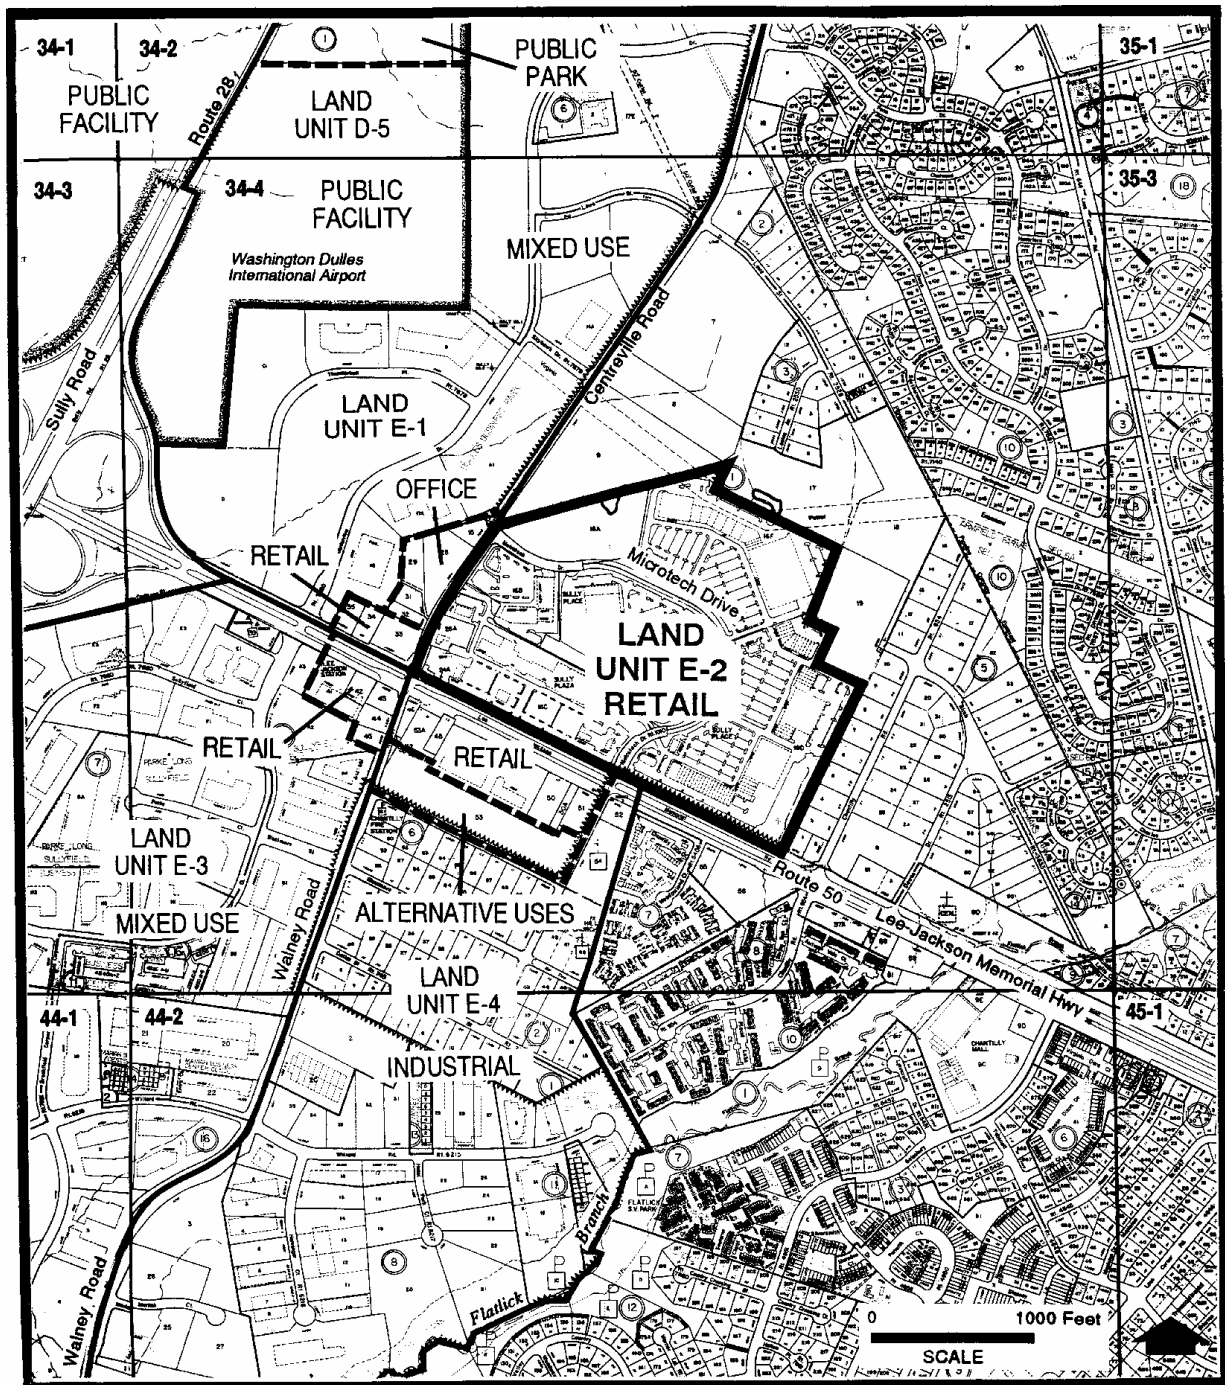

1. This land unit is planned for retail use with ancillary office use not to exceed 20 percent up to a maximum FAR of .25. This will provide a transition in intensity to the residential areas located to the north and east.
2. Free-standing, auto-oriented retail commercial and financial uses should be discouraged because of the potentially adverse visual impacts and because traffic related to free-standing uses can interfere with efficient auto and pedestrian circulation related to other commercial development in the shopping center as well as traffic movement on the two major highways.
3. Commercial development in this land unit should be designed to facilitate on and off-site pedestrian access and circulation thereby reducing dependence on the automobile and enhancing the neighborhood-serving nature of this retail development.
4. Much of the land in the vicinity of the intersection of Centreville Road and Route 50 may be used to accommodate the planned interchange, therefore, any development of this area should dedicate land for the interchange as appropriate.
5. Development in this land unit should incorporate substantial landscaped open space to screen and buffer retail use from adjacent residential use to the north and east and to provide a visual amenity within this type of retail shopping center.

Environment

Wetlands in this land unit should be preserved as open space.

Transportation

1. Land that will be needed for the future interchange at the intersection of Centreville Road and Route 50 should be dedicated.
2. Direct access, that is, the exit and entrance to the Sully Place Shopping Center, should be improved on Route 50 and Centreville Road.

LAND UNIT E-2
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 22

Greenways/Trails

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

The Countywide Trail should be developed on the west side of Centreville Road and north side of Route 50.

Connections should be provided across Route 28 to enhance the continuity of non-vehicular circulation across Route 28 and along Route 50.

LAND UNIT E-3

CHARACTER

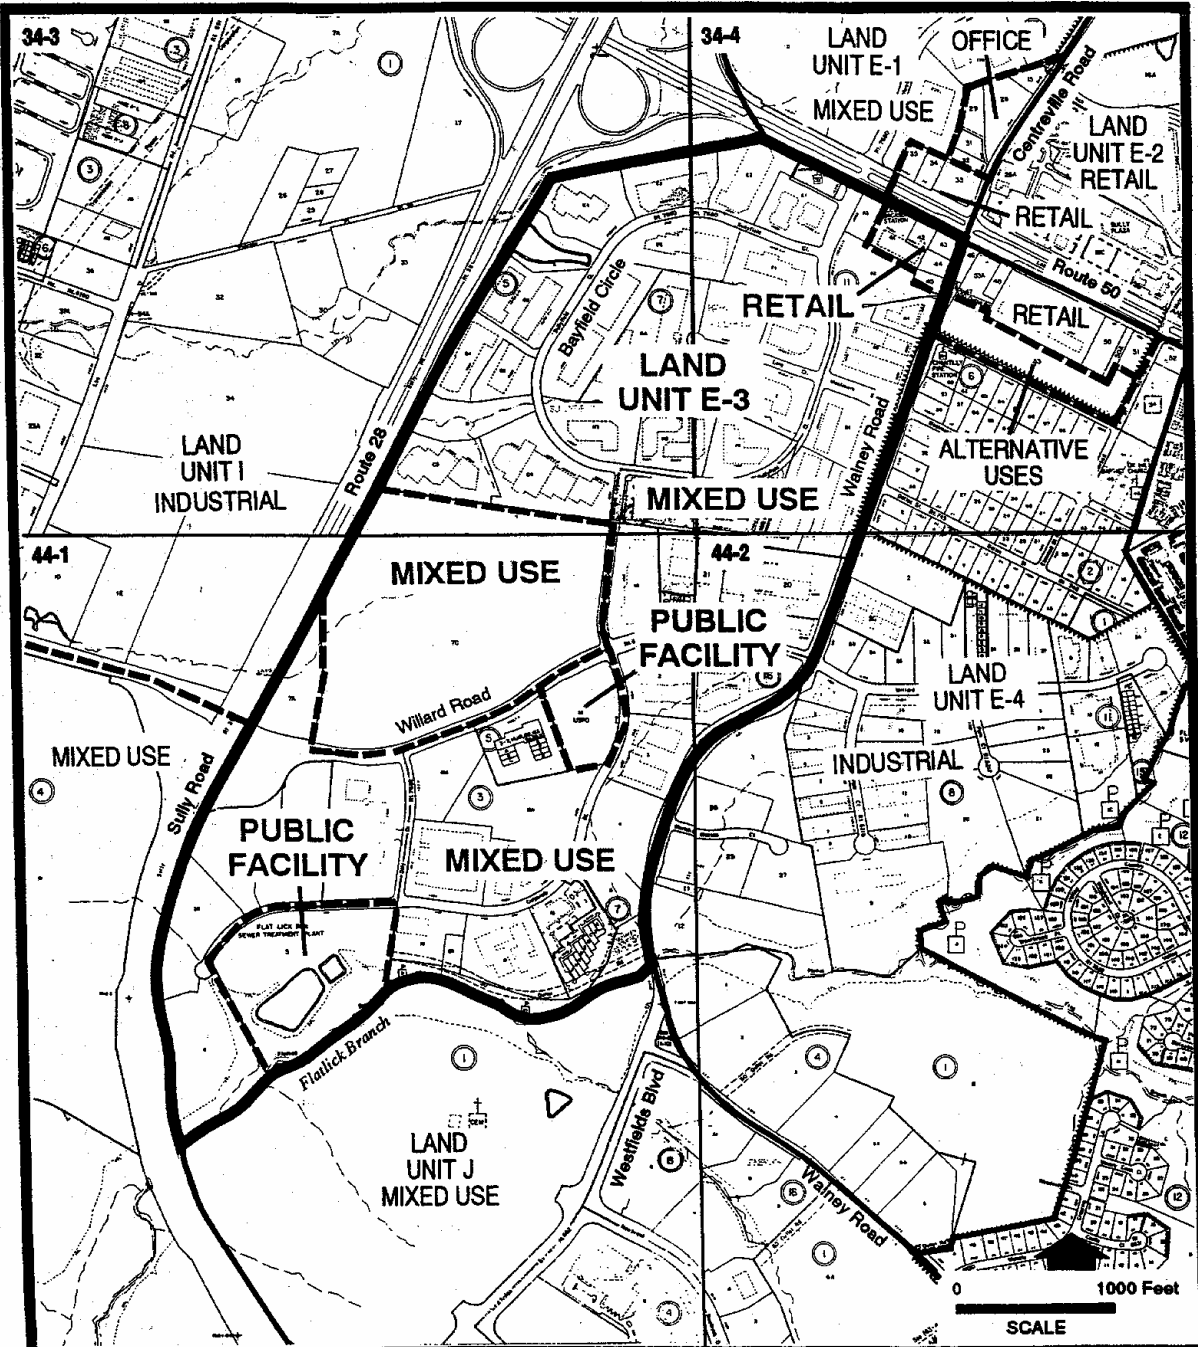

Land Unit E-3 consists of approximately 350 acres in the southeast quadrant of the intersection of Route 28 and Route 50. Flatlick Branch of Cub Run forms the southern boundary and Walney Road forms the eastern boundary (Figure 23).

Most of the land unit is developed, primarily in retail, industrial, industrial/flex and campus-style office use. The industrial and industrial/flex uses are primarily located in the northern portion of the land unit oriented to the Route 50/Route 28 interchange. This portion of the land unit includes the Sullyfield Business Park, developed at an FAR of approximately .35. Office use is located in the southern portion of the land unit south of Willard Road and includes the Brookfield Corporate Center at a similar intensity. Approximately 40 acres of the land unit are developed with public uses, including the Chantilly post office and a Fairfax County Park Authority nursery operation. Chantilly Place Shopping Center is located at the northeast quadrant of the intersection of Route 28 and Willard Road. A small amount of retail commercial use is located at the intersection of Route 50 and Walney Road. Part of this retail area includes a small retail center, Lee Jackson Station. The remainder of the strip retail uses in this vicinity may be impacted by the future interchange improvement planned for this intersection.

RECOMMENDATIONS

Land Use

1. Except for Parcels 44-1((9))A-F, and Parcels 34-4((1))41-45, the area north of Willard Road is primarily developed as the Sullyfield Business Park. Sullyfield is planned and developed as a mix of office, retail and industrial uses at .35 FAR.
 - A mixed use center including office, retail, exhibition center and hotel uses, is planned for the northeast quadrant of the intersection of Route 28 and Willard Road (Parcels 44-1((9)) A-F). Recognizing the synergy of the unique mix of uses approved for these parcels, an increase up to a maximum FAR of .50 could be appropriate for said parcels provided the property retains a commercial rather than industrial zoning designation, with community serving retail and/or exhibition facilities as a primary use. Traffic impacts associated with any increase of development intensity above .35 FAR will be evaluated and addressed in conjunction with the rezoning, proffer condition amendment and/or special exception application seeking such an increase.
 - Parcels in the southwestern quadrant of Route 50 and Centreville Road (Parcel 34-4((1))41, 42, 43, 44 and 45) which contains Lee-Jackson Station, are planned for retail use up to a maximum FAR of .25 if 1) all the parcels are consolidated, 2) circulation and access are coordinated, and 3) land is dedicated for the planned interchange, as appropriate.
2. The area south of Willard Road contains the majority of the Brookfield Corporate Center and is planned for campus-style office and industrial/flex development up to a maximum of .35 FAR to be compatible with existing uses and intensities. Ancillary retail use up to 20 percent of the total development, to serve employees, may also be appropriate and should be incorporated within the first floor of the office and industrial/flex buildings.

LAND UNIT E-3
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 23

Transportation

1. Access to this land unit should be oriented to existing roadways that intersect Route 28.
2. Direct access to Parcel 34-4((11))A4 on Walney Road should be improved and not interfere with future intersection improvements.
3. If future studies determine that right-of-way is needed in Land Unit E-3 to facilitate development of an integrated transit system for the Dulles Suburban Center, then the needed right-of-way should be provided through dedication, easements or other mechanisms, as appropriate.

Greenways/Trails

The Flatlick Branch EQC is a major east-west connector of the Dulles Greenway, providing access between the Cub Run Stream Valley Parks, eastern land units, and, by extension, the Fairfax Center area. Dedication of land or open space easements to the Fairfax County Park Authority and construction of the remaining sections of the stream valley trail is recommended as a condition of development or redevelopment of adjacent parcels.

The Countywide Trail should be developed along the Route 50 frontage. Connections shall be provided across Route 28 to enhance the continuity of non-vehicular circulation across Route 28 and along Route 50.

As a critical component of the Greenway system, non-vehicular access should be provided via the Countywide trail across Route 50 to Sully and the future Smithsonian Air and Space Museum Annex.

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

LAND UNIT E-4

CHARACTER

Land Unit E-4 consists of approximately 250 acres and is located south of Route 50 with Walney Road as its western boundary. Elmwood Street, Chantilly Mews, Pinewood Meadows and Winding Brook townhouse subdivisions form part of the eastern boundary. Flatlick Run and Waverly Crossing single-family detached residential subdivisions form the eastern and southern boundaries (Figure 24).

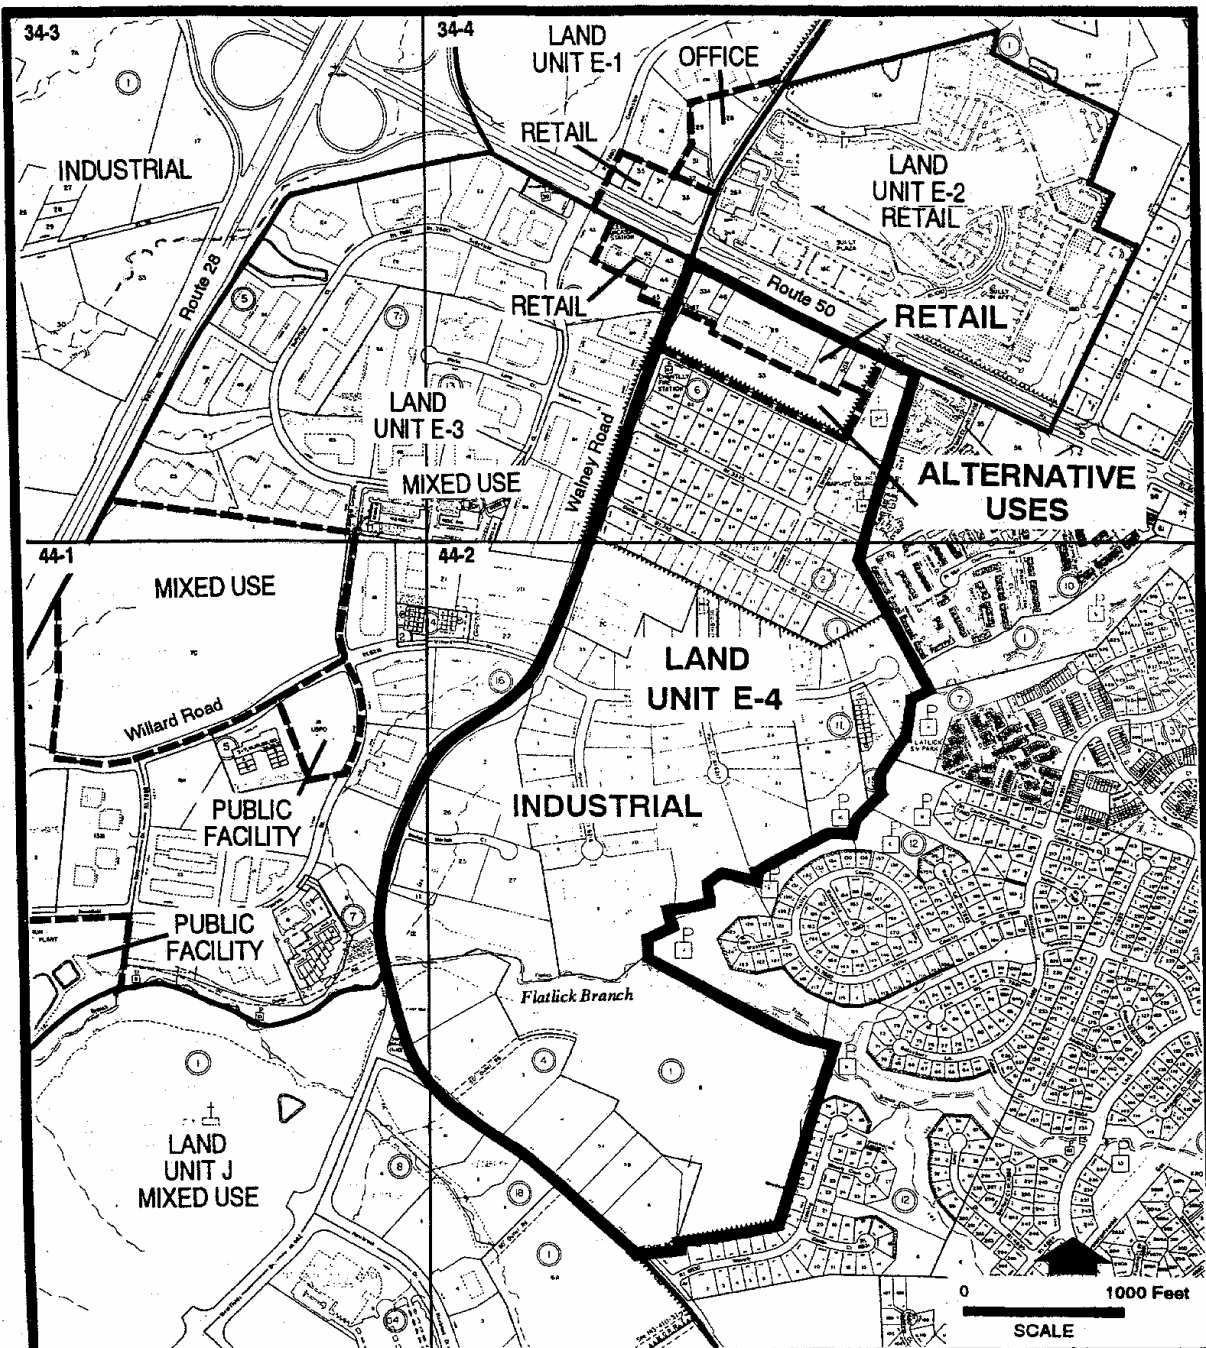

Approximately one-third of the land unit is developed primarily as industrial and industrial/flex use. Public uses include a rehabilitation facility, a fire and rescue facility and a Fairfax County Water Authority facility. The remaining land is developed primarily in retail and office use. The retail use is located along Route 50, and includes the Pohanka auto dealership.

An older single-family detached residential subdivision (formerly Rockland Village) located in the northern portion of the land unit between Walney Road, Chantilly Mews and Pinewood Meadows has been redeveloped with single-family attached and detached housing, as well as multifamily housing.

RECOMMENDATIONS

Land Use

1. Parcels in the southeastern quadrant of the intersection of Route 50 and Centreville Road (Tax Map 34-4((1))46, 47, 48, and 53A), are developed with low intensity retail uses at an average FAR of .15. Redevelopment for retail use up to a maximum of .25 FAR may be appropriate if these parcels are consolidated into a single development proposal, access is coordinated and land is dedicated for the planned interchange.
2. Community-serving retail use is planned for most of the land fronting on Route 50 between Walney Road and Elmwood Street (Parcels 34-4((1)) 49, 50, 50A, 51) at a maximum overall FAR of .25. Tax Map 34-4((1))52A is planned for retail use and developed as a bank. The parcel is planned to retain its existing intensity of .08 FAR. Landscaping should be provided on all perimeters of the site to enhance the visual attractiveness of development.
3. Additional retail or auto-oriented uses are not planned for and are not appropriate along Route 50 or Walney Road in this land unit, except as described above in recommendations #1 and #2 above.
4. Tax Map parcels 34-4((1))52A and 53 are planned for retail use up to a maximum FAR of .20. Building height should not exceed 35 feet. In addition, 35 feet of screening should be provided on Parcel 53 along Vernon Street to provide an appropriate transition to the residential neighborhood to the south. As an option, Parcel 34-3((1))53 may be appropriate for the expansion of existing auto dealerships located along Route 50 if the same conditions cited above are met.

LAND UNIT E-4
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 24

5. Existing institutional and governmental uses include two churches and a fire station that are a part of the community. If redeveloped, residential use up to 16-20 du/ac should occur if the following conditions are met:
 - Substantial consolidation should occur in a manner that will provide for the development of any unconsolidated parcels in conformance with the planned use and intensity;
 - Infill development is compatible with adjacent residential uses;
 - Substantial buffers are provided to screen and protect adjacent residential areas against noise and lighting impacts;
 - Building heights do not exceed 35 feet adjacent to existing residential development on the eastern perimeter; and
 - Efficient access and coordinated circulation is provided.
6. The area generally extending south of Vernon Street to the south of Dallas Street, east of Walney Road, is planned for residential use. This area is not within the Route 28 Tax District and residential development will not affect the viability of the Tax District. Residential use may be appropriate at a density of 16-20 dwelling units per acre, if the following conditions are met:
 - Infill development is compatible with adjacent residential uses;
 - Development is designed in such a way that adverse impacts from adjacent non-residential uses are ameliorated, incorporating such techniques as screening;
 - Building heights do not exceed 35 feet adjacent to existing residential development on the eastern perimeter;
 - Right-of-way is dedicated for the improvement of Walney Road;
 - Residential development is consistent with the County's adopted policies regarding residential development in areas impacted by noise from Dulles Airport; and
 - Access and circulation should be coordinated, particularly to prevent cut-through traffic between Walney Road and Route 50.
7. Land between the former Rockland Village subdivision and Flatlick Branch is planned for and largely developed with light industrial and industrial/flex use up to a maximum FAR of .35 to be compatible with existing development. Ancillary retail uses up to 20 percent to serve employees may be appropriate if they are integrated into buildings with other primary uses.
8. The land south of Flatlick Branch is planned for residential use at 2-3 dwelling units per acre. Residential development should be consistent with the County's adopted policies regarding such development in areas impacted by noise from Dulles Airport.

Transportation

1. Access for Route 50 frontage development should be only via Elmwood Street/Metrotech Drive.
2. Development access to Rockland Village should be oriented to Elmwood Street rather than Walney Road. If residential use is developed in Rockland Village then site design should discourage cut-through traffic from Walney Road to Route 50.

Greenways/Trails

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

The Flatlick Branch EQC is a major east-west connector of the Dulles Greenway, providing access between the Cub Run Stream Valley Parks, eastern land units, and, by extension, the Fairfax Center Area. Dedication of land or open space easements to the Fairfax County Park Authority and construction of the remaining sections of the stream valley trail are recommended as a condition of development or redevelopment of adjacent parcels.

The Countywide Trail should be developed along the Route 50 frontage. Recognizing that providing continuous trails adjacent to the existing Route 50 right-of-way may not always be possible because of present interchange design, every effort should be made to provide other connections to enhance the continuity of the non-vehicular circulation along the corridor.

LAND UNIT F-1

CHARACTER

Land Unit F-1 is bounded on the north by Washington Dulles International Airport, on the east by Willard Road, on the south by Route 50 and on the west by the Loudoun County line (Figure 25). The land unit consists of approximately 265 acres of undeveloped land as of January 1992, approximately 50 percent of which is in the Cub Run floodplain.

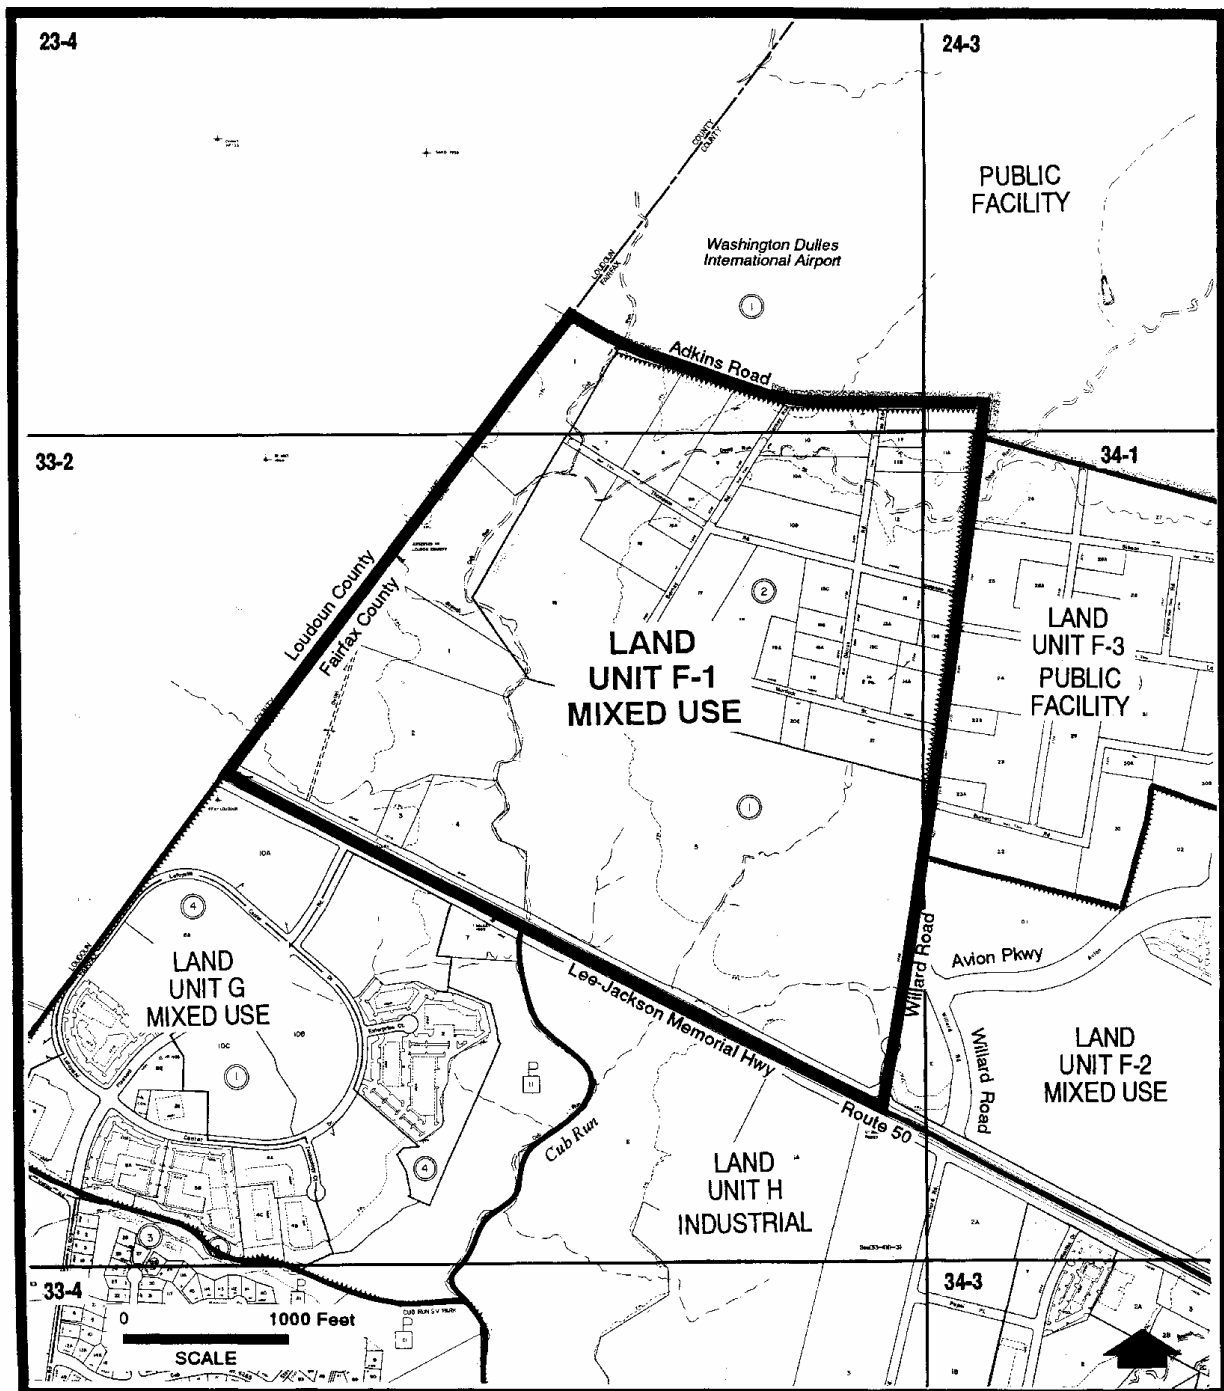

RECOMMENDATIONS

Land Use

1. Land Unit F-1 is planned for high-quality campus-style office and industrial/flex use up to a maximum FAR of .35, consistent with the type and character of development established in adjoining land units. Substantial setbacks, landscaping and screening should be provided along Route 50 and along Willard Road for an attractive appearance. Direct access to Route 50 should be permitted from Parcel 33-2((1))2 which is constrained on its eastern side by an EQC which traverses the parcel from north to south. In addition to existing access points, one new access point could be permitted to the balance of the land unit provided it does not impact environmentally sensitive lands. Substantial consolidation of small parcels is recommended and should be carried out in a manner that ensures that unconsolidated parcels have adequate access and can be developed in accord with the Comprehensive Plan. Architecture should also function as an element of design integration and architectural sketches should be made available for the public review process.
2. As optional uses, a hotel and/or conference facilities, restaurants, or cultural facilities may be appropriate. Given the extensive EQC in this land unit, public and/or private recreational uses, including a golf course, should be considered if developed in an environmentally sensitive manner.
3. Retail use not to exceed .35 FAR may be appropriate in this land unit to support the planned Smithsonian Air and Space Museum Annex at Dulles Airport and/or the eventual southern access to Dulles Airport. This retail use should be oriented to Willard Road and should be compatible with and complementary to the tourist-oriented Smithsonian Annex and/or users of the Airport. Quality architecture and land design are an essential element of any land development for this area. Conventional strip commercial development is not planned and is not appropriate along Route 50 or along Willard Road.

Transportation

1. A commuter parking lot served by transit may be appropriate for this area.
2. Willard Road should be encouraged as the southern entrance to Dulles Airport.
3. The Willard Road option for access to the Smithsonian Air and Space Annex should be explored with adjacent land owners, the Metropolitan Washington Airports Authority and the Smithsonian Institution at the initial planning stages.

LAND UNIT F-1
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 25

4. If future studies determine that right-of-way is needed in Land Unit F-1 to facilitate development of an integrated transit system for the Dulles Suburban Center, then the needed right-of-way should be provided through dedication, easements or other mechanisms, as appropriate.

Greenways/Trails

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

Stream Valley Recreational Trails: A trail connection should be provided to link the Cub Run Stream Valley Trail with the Sand Branch Greenway in Loudoun County.

Countywide Trail: Develop the Countywide Trail along Willard Road south from Dulles Airport and west along the north side of Route 50. If a commuter park and ride lot and/or transit service is located in the land unit, adequate support facilities for bicyclists and pedestrians should be provided.

LAND UNIT F-2

CHARACTER

Land Unit F-2 is bordered on the north by Land Unit F-3 which is planned for a future County public safety facility. To the east, Land Unit F-2 borders Dulles Airport, including the possible future site of the Annex to the Smithsonian Air and Space Museum. Land Unit F-2 is bounded on the south by Route 50 and on the west by Land Unit F-1 and Willard Road. This land unit contains approximately 170 acres, about 135 acres of which were vacant, as of January 1992 (Figure 26).

Existing development consists of one- to three-story buildings in a well-landscaped setting that preserves large amounts of existing vegetation and enhances the site with water features. Both low-rise office and industrial/flex uses are present. A clearly defined identity exists, due to a unified design for architecture, landscaping, signage, lighting, pathways and bridges. A small church and its cemetery occupy approximately three acres near the Route 28/Route 50 interchange.

An Annex to the Smithsonian's Air and Space Museum has been recommended by the United States Congress for a site on the Dulles Airport property immediately east of Land Unit F-2. Access is planned from an interchange at Route 28 and Barnesfield Road, but access might also be desirable from the west. Although the Airport Master Plan includes alternative concepts for a possible future southern terminal, the 20-year Master Plan does not include a specific terminal site. If such a terminal is planned, Willard Road would be the probable future access to this facility.

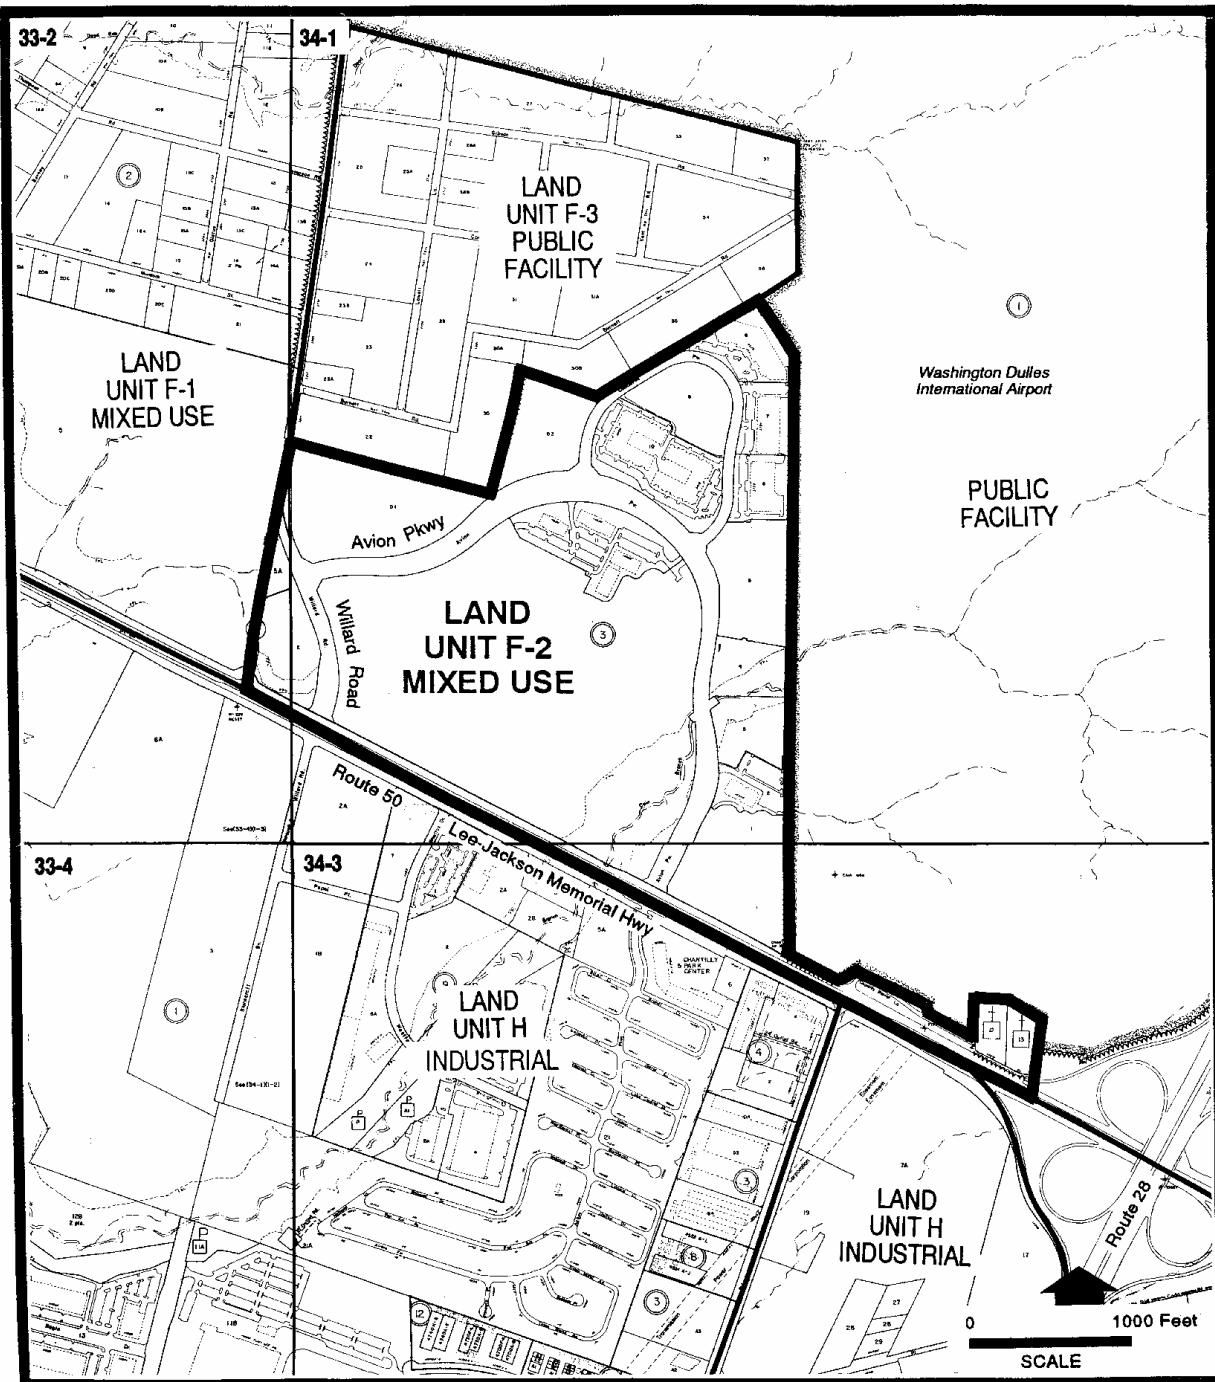

RECOMMENDATIONS

Land Use

1. This land unit is planned for office and industrial/flex uses up to a maximum .50 FAR, continuing the existing character and type of uses. Ancillary retail uses, not to exceed 20 percent of total development, may be appropriate. Lodging, restaurants, and/or cultural uses should be considered as optional uses. Any new development should maintain and enhance the high-quality design of the existing development.
2. Conventional strip or freestanding commercial development is not planned and is not appropriate along Route 50 and Willard Road, except as specifically noted above in Land Use Recommendation #1.

Transportation

1. If future studies determine that right-of-way is needed in Land Unit F-2 to facilitate development of an integrated transit system for the Dulles Suburban Center, then the needed right-of-way should be provided.
2. If the Smithsonian Air and Space Museum Annex location is approved for the site on the Dulles Airport property east of Land Unit F-2, then access through Land Unit F-2 might be appropriate.
3. Commercial retail uses are not planned and are not appropriate along Route 50.

LAND UNIT F-2
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 26

Greenways/Trails

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

The Countywide Trail should be continued west along the north side of Route 50. Connections should be provided across Route 28 to enhance the continuity of non-vehicular circulation across Route 28 and along Route 50. Trail connections to the proposed Smithsonian facility and to the Greenway parks south of Route 50 should be via Willard Road.

LAND UNIT F-3

CHARACTER

This land unit contains approximately 110 acres and is entirely owned by the Fairfax County Board of Supervisors (Figure 27). The County plans to co-locate in this land unit the Consolidated Public Safety Academy Facility and the Work Training Center, a minimum security correctional facility. The Public Safety Academy will consolidate public safety facilities currently scattered elsewhere in the County and in West Virginia.

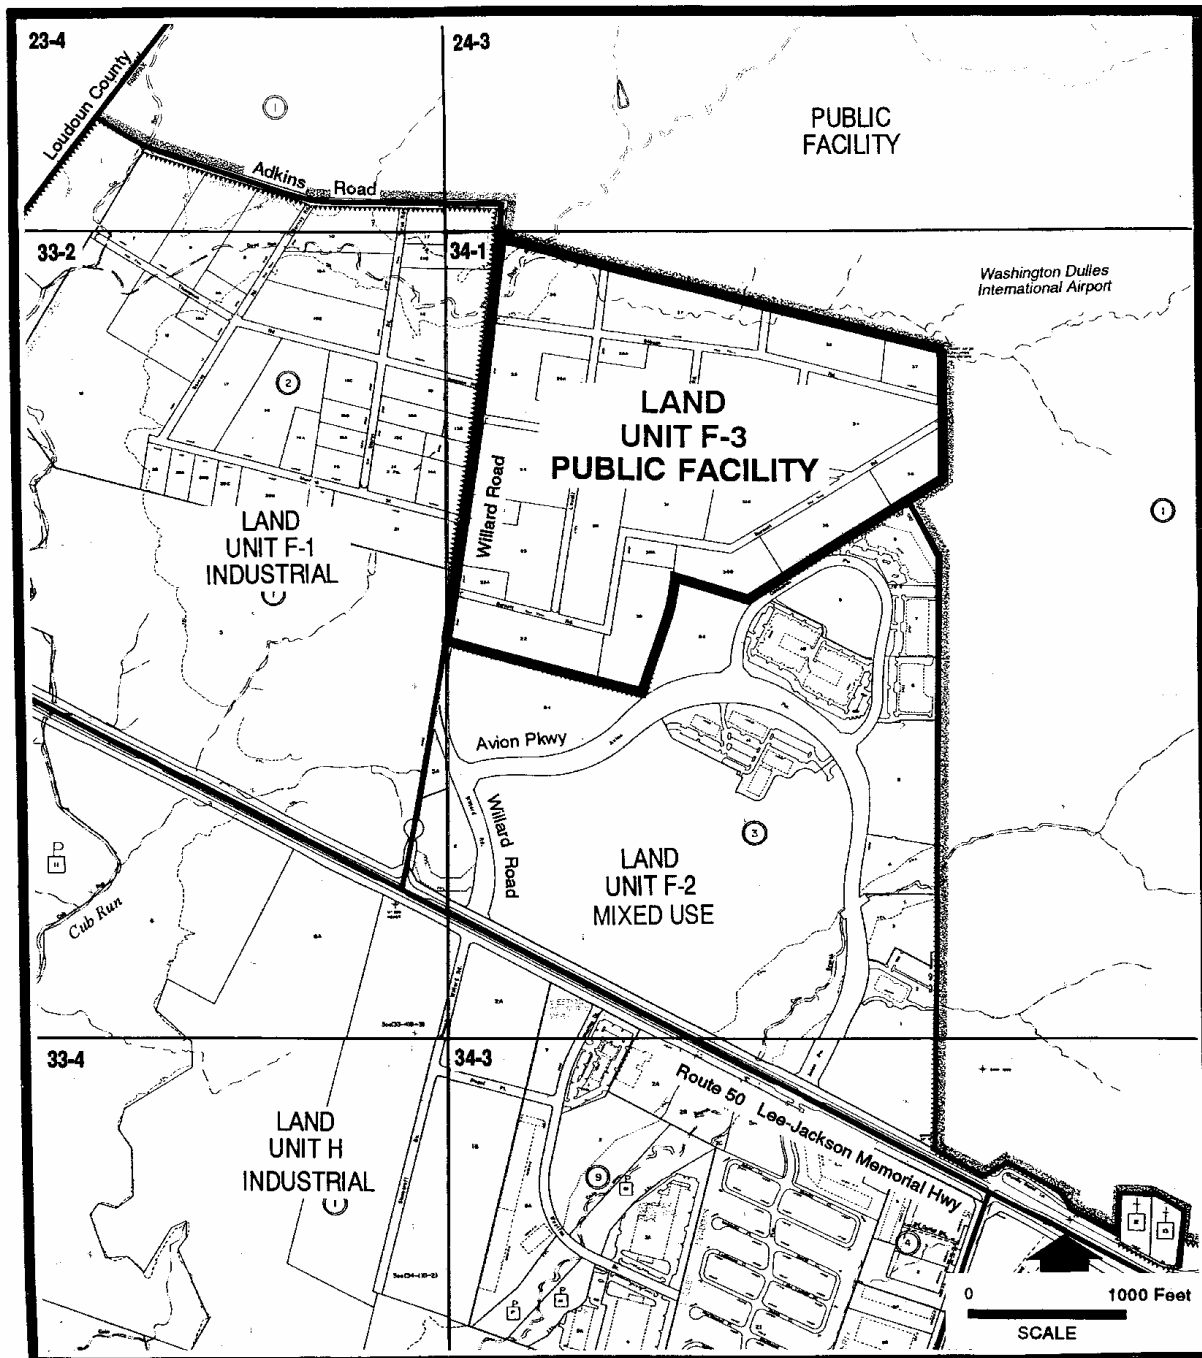

RECOMMENDATIONS

Land Use

1. This land unit is planned for public facility use, specifically for public safety training facilities, including a work training facility and medium security facility for minimum risk prisoners. This land unit should be developed in accordance with the plan, approved June, 1986 under 2232-C86-5, including all conditions for buffering and screening, noise mitigation and access. Any amendments to the approved plan should follow the same procedures, including public hearings, and provide for landscaping of a similar quality as adjacent development. Specific uses that may be developed at this facility, (according to the approved development conditions,) include a firearms training range; a driver training track and related facilities; and facilities for classroom training, outdoor practical exercises, and physical fitness training. An adequate buffer should be maintained around the facility to protect adjacent uses from any adverse impacts.

Transportation

If future studies determine that right-of-way is needed in Land Unit F-3 to facilitate development of an integrated transit system for the Dulles Suburban Center, the needed right-of-way should be provided through dedication, easements or other mechanisms, as appropriate.

LAND UNIT F-3
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 27

LAND UNIT G

CHARACTER

This land unit is bounded on the west by Loudoun County, on the north by Route 50, on the east by Cub Run and on the south by the Pleasant Valley subdivision (Figure 28). The entire 151-acre land unit, developed under the name of Lafayette Business Park, includes industrial/flex and low-rise office development, with industrial/flex the predominant use. Lafayette Business Park extends into Loudoun County and is served by the same loop road. Coordinated urban design elements such as ornamental fencing and landscaping, signage, and lighting unify the appearance of the business park. As of January, 1992, approximately 95 acres were vacant.

Pleasant Valley Road bisects the land unit, connecting the residential areas to the south with Route 50. South of the land unit, Pleasant Valley Road is a two-lane country road, but it has been improved to four lanes in the business park. Adjacent residential areas are separated from the business park by the Cub Run Stream Valley Park.

This land unit contains prehistoric sites as old as 11,500 years, as well as historic period sites and structures. An historic site, the Hutchinson House, has been preserved and integrated into the business park as the visitor information center.

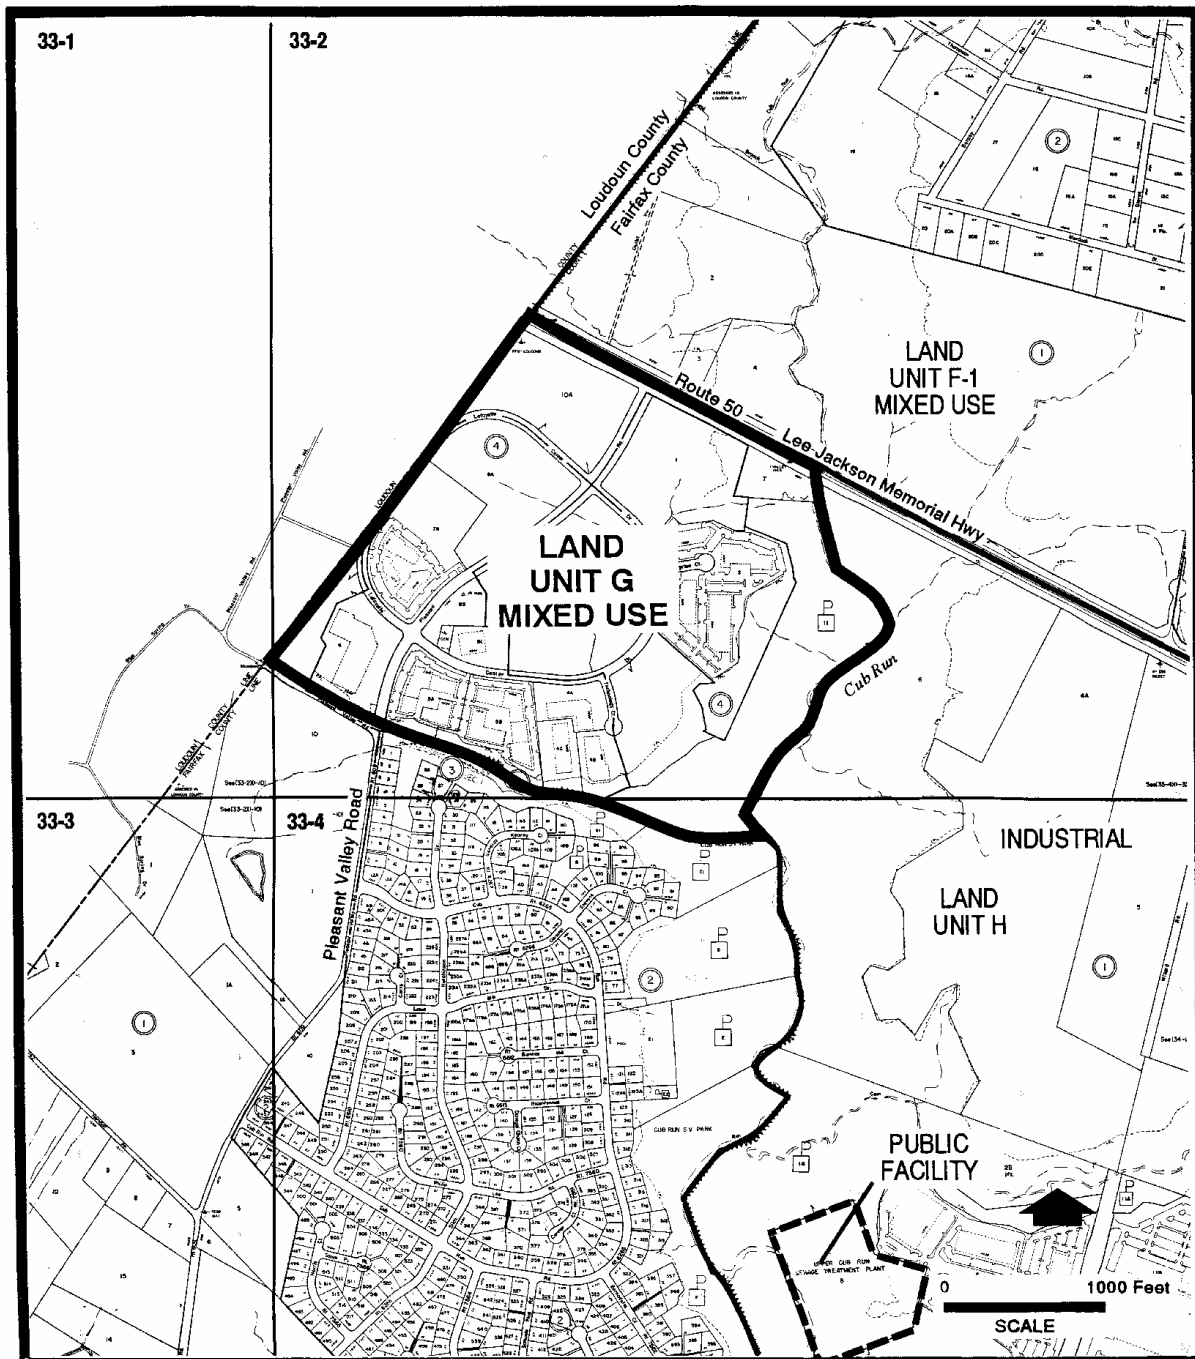

RECOMMENDATIONS

Land Use

1. Land Unit G is planned for low-rise office, light industrial, research and development, and industrial/flex use to be compatible with the existing uses, up to a maximum FAR of .35. This development should occur in a manner that provides high quality design on well-landscaped sites and continues to protect adjacent residential neighborhoods from negative impacts. Mitigation measures should include landscape buffering, screening, and protection from lighting glare. Substantial setbacks, landscaping and screening should be provided along Route 50 for an attractive appearance.
2. Commercial retail uses are not planned and are not appropriate along Route 50.
3. Public and/or private recreational uses may be appropriate optional uses in this land unit.
4. Coordinated urban design elements between developments should be encouraged, including elements such as landscaping, signage, and lighting.

Transportation

A portion of this land unit is recommended as a possible location for a commuter park and ride lot to be served by transit.

LAND UNIT G
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 28

Greenways/Trails

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

The Cub Run Stream Valley Park/EQC forms the western boundary of the Dulles Greenway and is also a major element of the planned Northern Virginia Regional Greenway system. Internal trails should be developed to connect with the Cub Run Stream Valley trail through existing parkland in Land Unit G and to the Countywide trail route planned along the south side of Route 50. The stream valley trail should be located to avoid adverse impacts on sensitive resource areas. It is desirable for Fairfax County trails to connect with Loudoun County trails.

LAND UNIT H

CHARACTER

Land Unit H contains approximately 880 acres and is unique in that existing development is predominantly industrial in character, although nearly 500 acres were vacant as of January 1992 (Figure 29). This land unit contains soft drink and beer bottling plants; a regional package shipping facility; and wholesale, warehousing and storage facilities. These and other similar uses generate considerable truck traffic on the local roads. In the Westfax Industrial Park, one mid-rise hotel has been built which is nominally on Route 50, but oriented to and accessed on Westfax Drive. Some industrial/flex uses exist, as well as some low-rise office development, particularly in the southeast corner of the land unit on Lee Road. A small amount of strip commercial development exists along Route 50.

Land Unit H contains the Dulles Meadows Mobile Home Park. The mobile home park provides important affordable housing; however, the majority of this community is located inside the DNL 60 dBA noise contour associated with projected operations at Dulles Airport.

There are approximately 70 acres of public land in the land unit, including parkland along Cub Run and its tributaries. The former Upper Cub Run Sewage Treatment Plant has been converted to a County materials storage yard.

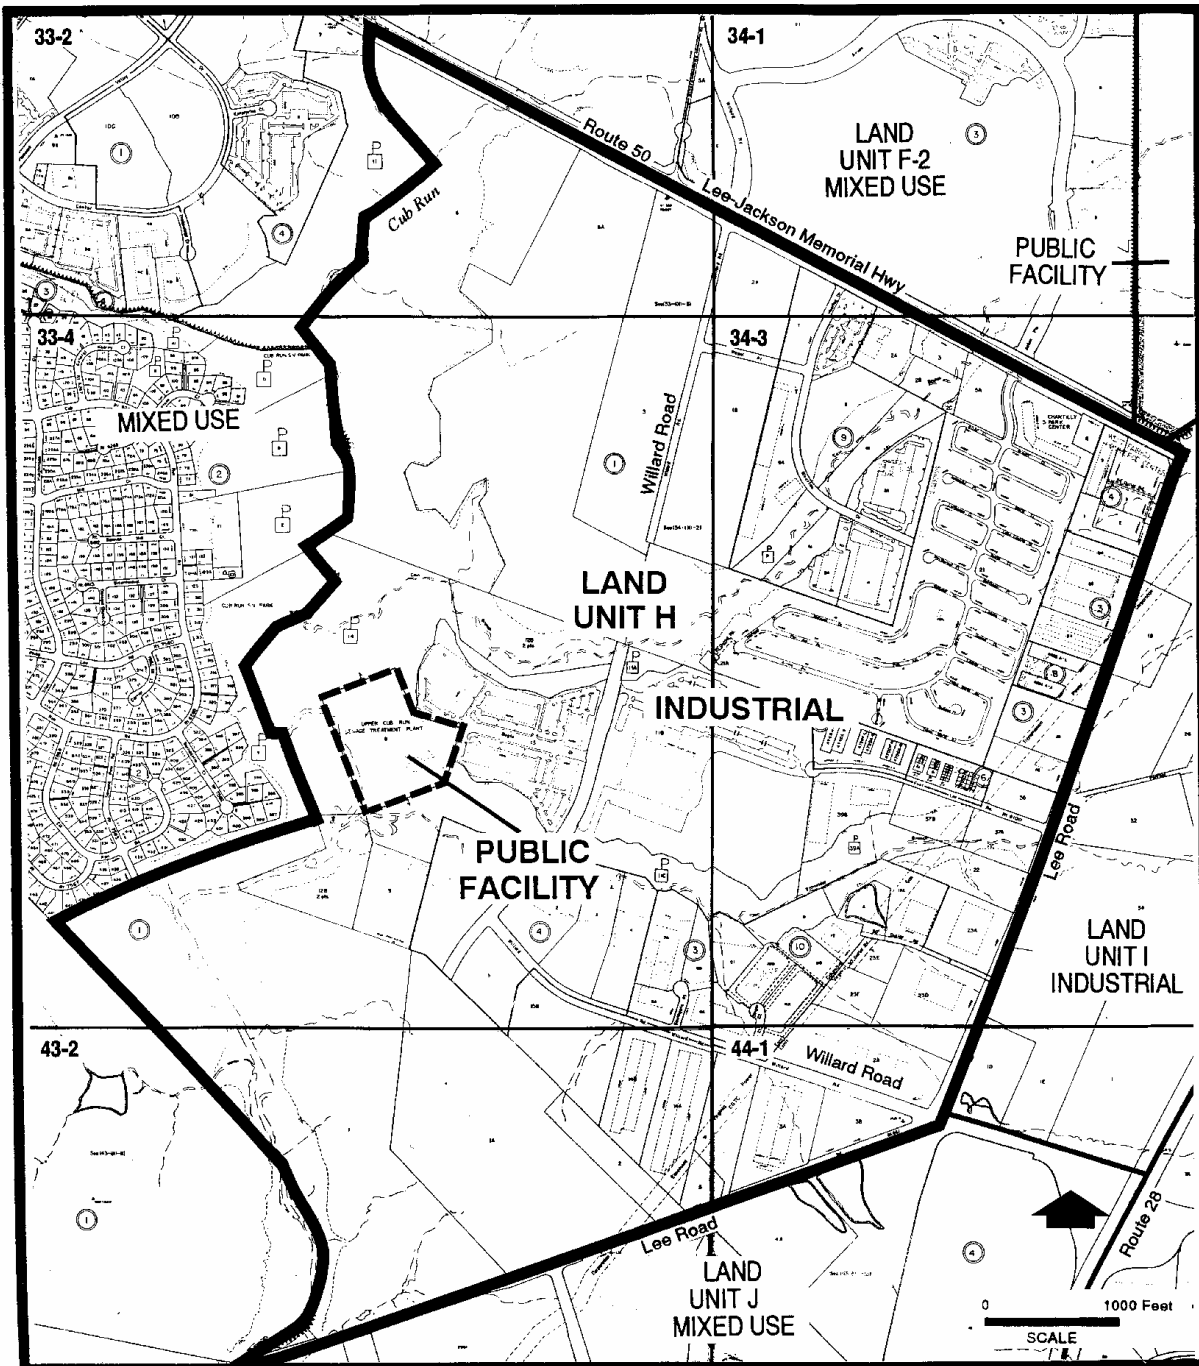

RECOMMENDATIONS

Land Use

1. Land Unit H is planned for industrial, research and development, and industrial/flex uses up to a maximum FAR of .35.
2. An auto park may be appropriate as an optional use on Parcels 33-2((1))6 and 6A, if the conditions listed below are met. An auto park is defined as a large tract of land that accommodates two or more dealers engaged in automobile sales and service, as well as related ancillary services.

Conditions:

- The auto park is a minimum of 50 acres in size;
- A unified development plan is provided for the entire site, recognizing that development may be phased as dealerships are added to the park;
- The primary uses in the auto sales park are all related to vehicle sales and service. Ancillary uses to serve customers may also be considered;
- Substantial setbacks and a landscaped berm should be provided along Route 50 to screen view of the use from the road. A single freestanding sign to identify the auto park may be visible from Route 50; and

LAND UNIT H
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 29

- Development should be oriented to Willard Road, preferably with building placement designed to screen outside display and storage facilities from Route 50. Substantial setbacks, screening and landscaping should be provided along Willard Road to establish a campus-style setting. Signage at the auto park entrance(s) may be appropriate.
- 3. Industrial/flex use is appropriate in the southern portion of the land unit, along Lee Road and adjacent to the boundary of Land Unit J (Westfields International Corporate Center). Light industrial, research and development use and training may also be appropriate. Development should be integrated with existing or planned uses in the area.
- 4. Public and/or private recreational uses to serve the local community and employees may be appropriate optional uses in this land unit.
- 5. Dulles Meadows Mobile Home Park should be recognized as a viable residential area. This residential neighborhood should be protected; transitional screening requirements on adjacent industrially planned parcels should neither be waived nor modified. Dulles Meadows Mobile Home Park should not be expanded because it is largely within the airport noise impact area. If the Mobile Home Park is redeveloped to other uses, then relocation assistance to the tenants of the park should be provided in accord with the guidelines of the Policy Plan.
- 6. Strip or freestanding commercial development is not planned for and is not appropriate along Route 50. Landscaping and facade improvements, including consistent signage, should be encouraged to enhance the appearance of existing retail uses.

Transportation

1. If future studies determine that right-of-way is needed in Land Unit H to facilitate development of an integrated transit system for the Dulles Suburban Center, the needed right-of-way should be provided through dedication, easements or other mechanisms, as appropriate. Land Unit H may be an appropriate location for maintenance facilities for an integrated transit system. Such facilities should be designed to be compatible with existing and planned land use in the vicinity, by using such techniques as buffering and screening.
2. A portion of this land unit is recommended as a possible location for a commuter park and ride lot to be served by transit.

Parks and Recreation

The Cub Run, Cain Branch and Schneider Branch EQCs are planned as public parkland. Portions of these stream valleys contain sensitive resource areas which should be protected through appropriate land management agreements with the Fairfax County Park Authority.

Portions of the undeveloped property bordering Cub Run Stream Valley immediately north of Westfields, Parcels 43-2((1))1 and 1A, may be suitable for development of active recreation facilities. This area is particularly well suited for park use because of its contiguity with the approximately 250-acre Richard W. Jones Park on the western side of Cub Run. The Fairfax County Park Authority should seek to acquire this property through dedication or a combination of dedication, easements, and use agreements.

Greenways/Trails

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

LAND UNIT I

CHARACTER

Land Unit I consists of approximately 170 acres and is located in the southwest quadrant of the intersection of Route 28 and Route 50 (Figure 30). Lee Road forms the western boundary of Land Unit I. Almost all of the land in Land Unit I is vacant. Existing uses are limited to a petroleum products depot and a research and development type structure. There is no direct access from this land unit to Route 28. Access to Route 50 is via Lee Road.

RECOMMENDATIONS

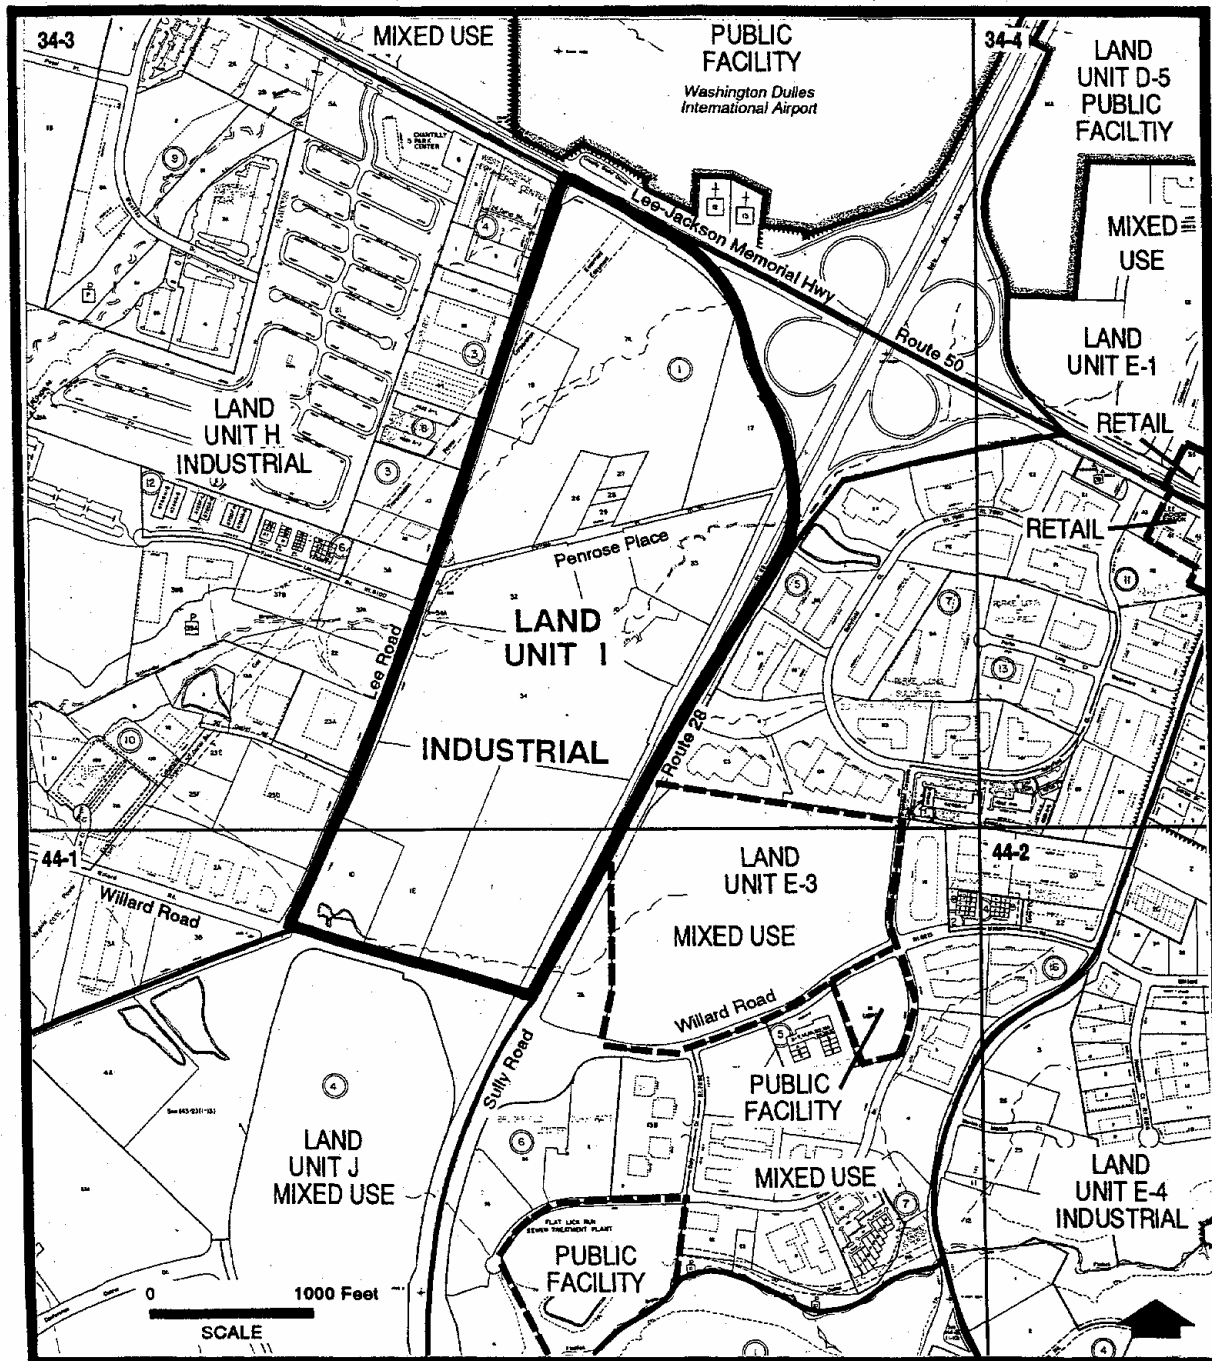

Land Use

1. This land unit is planned for light industrial and industrial/flex uses up to a maximum FAR of .35. Development should be of high quality and attractive, particularly along the frontage of Route 28. Light industrial use should be oriented to Lee Road to be compatible with existing development on the west side of Lee Road in Land Unit H and industrial/flex use should be oriented to Route 28 opposite similar use in Land Unit E-3. As an option, high quality hotel and/or a mixture of office and industrial/flex uses are also appropriate in this land unit because of its high visibility. These uses should complement the National Air and Space Museum Annex through providing a balanced mixture of tourist and employment uses. The area north of the Environmental Quality Corridor (EQC) is most visible to Route 50 and offers the greatest potential to provide high-quality tourist oriented uses to support the National Air and Space Museum Annex.

Subject to meeting the elements listed under "Performance Criteria for Optional Uses," the land area north of Penrose Place and south of the EQC, as well as Tax Map 34-3((1))33, may be appropriate for a mixture of uses including retail, restaurant and/or recreational facilities. Restaurant uses may be appropriate north of the EQC only if the use is limited to high-quality eating establishments that incorporate excellence in design, sitting, style and materials. Drive through and/or fast food restaurants are not appropriate. Private recreational uses may also be appropriate north of the EQC. For retail, restaurant and/or recreational uses, the following conditions should also be met:

- A maximum FAR of .25;
- Preservation of the environmental quality corridors which may be augmented by open space to preserve a minimum of 33% of the site;
- Access is limited to Lee Road and Penrose Place;
- Any development of the site must demonstrate to the satisfaction of the Fairfax County Office of Transportation that it does not impede traffic flow on Route 50 or the Route 50/Route 28 interchange; and
- No more than four freestanding pad sites on the site.

Retail use is not planned north of the EQC; however, a furniture store may be appropriate as an alternative to the hotel and private recreation uses that are planned and approved for the site

LAND UNIT I
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 30

between the EQC and Chantilly Crossing Lane. A furniture store may be considered because of its low trip generation rate, particularly at peak hours, if the following conditions are met:

- Limit development to a maximum of 67,500 square feet;
 - Demonstrate that traffic generated by this use will not adversely impact nearby intersections;
 - Provide high quality landscape and architectural design;
 - Provide signage that avoids the appearance of strip retail use; and
 - Provide a commitment to active recreation (land or funding) to offset the loss of the planned private recreation use on this site.
2. The existing petroleum products depot, Parcel 34-3((1))30, should not be expanded.

Transportation

1. Access to this land unit should be via Lee Road. Entrances along Lee Road should be consolidated.
2. The intersection of Willard Road with Lee Road or Route 28 should be considered as a location for a future transit stop.
3. If future studies determine that right-of-way is needed in Land Unit I to facilitate development of an integrated transit system for the Dulles Suburban Center, the needed right-of-way should be provided through dedication, easements or other mechanisms, as appropriate. Land Unit I may be an appropriate location for maintenance facilities for an integrated transit system. Such facilities should be designed to be compatible with existing and planned land use in the vicinity, by using such techniques as buffering and screening.
4. There should be no access to Willard Road from this land unit.

Greenways/Trails

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

The Countywide Trail should be developed along the east side of Lee Road from Route 50 south to Willard Road and along the Route 50 frontage. Connections should be provided across Route 50 to enhance the continuity of non-vehicular circulation across Route 28 and along Route 50.

LAND UNIT J

CHARACTER

Land Unit J is comprised almost entirely of the Westfields International Corporate Center at Dulles, an approximately 1,100-acre campus-style development of office, conference center/hotel, industrial and industrial/flex space uses (Figure 31). Westfields has provided extensive landscaping, sidewalks, trails, a roadway network, recreation facilities, and other features for its planned development. Stormwater detention facilities have been enhanced to serve as ornamental ponds and large amounts of existing vegetation have been preserved. Large natural buffers exist between Westfield's non-residential development and adjacent residential areas, taking advantage of the Cub Run and Flatlick Branch EQCs. A commuter parking lot is located on Stonecroft Boulevard, near its intersection with Westfields Boulevard.

The section of Land Unit J west of Route 28 has been partially developed for office and hotel/conference center use. The area east of Route 28 has been partially developed in office, industrial/flex and industrial uses, as of January 1992.

RECOMMENDATIONS

1. Land Unit J is planned and approved for office, conference center/hotel, industrial/flex and industrial use at an average of .50 FAR except as noted in Land Use Recommendations #5 and #6 below. Future development should be consistent with the character of the existing development. High quality landscaping should be maintained throughout the land unit.

It is desirable that development in this land unit be designed to enhance transit serviceability. This can be achieved by placing buildings closer together or to the road; designing them around plazas; utilizing approaches to bring employees within walking distance of transit facilities or otherwise facilitating transit-oriented development.

2. Mixed Use Focal Point

Described below are two options under which higher intensity mixed-use development may be appropriate for portions of Land Unit J in the vicinity of the intersection of Stonecroft Boulevard and Westfields Boulevard. The intent of this higher intensity mixed use development is to create a focal point to serve Westfield's employees, visitors, and nearby residents. Focal point development should be unified on one site, not split by a major arterial such as Route 28. Under either of these options the following applies:

- Access to this development should not be oriented to Route 28.
- A parking maximum for commercial development in the focal point should be established at the number of spaces required for office use at 1.0 FAR in conventional development without public transportation. To offset the decreased supply of parking, employers should be encouraged to participate in a transportation demand management program (TDM) including such alternatives as carpools and vanpools.

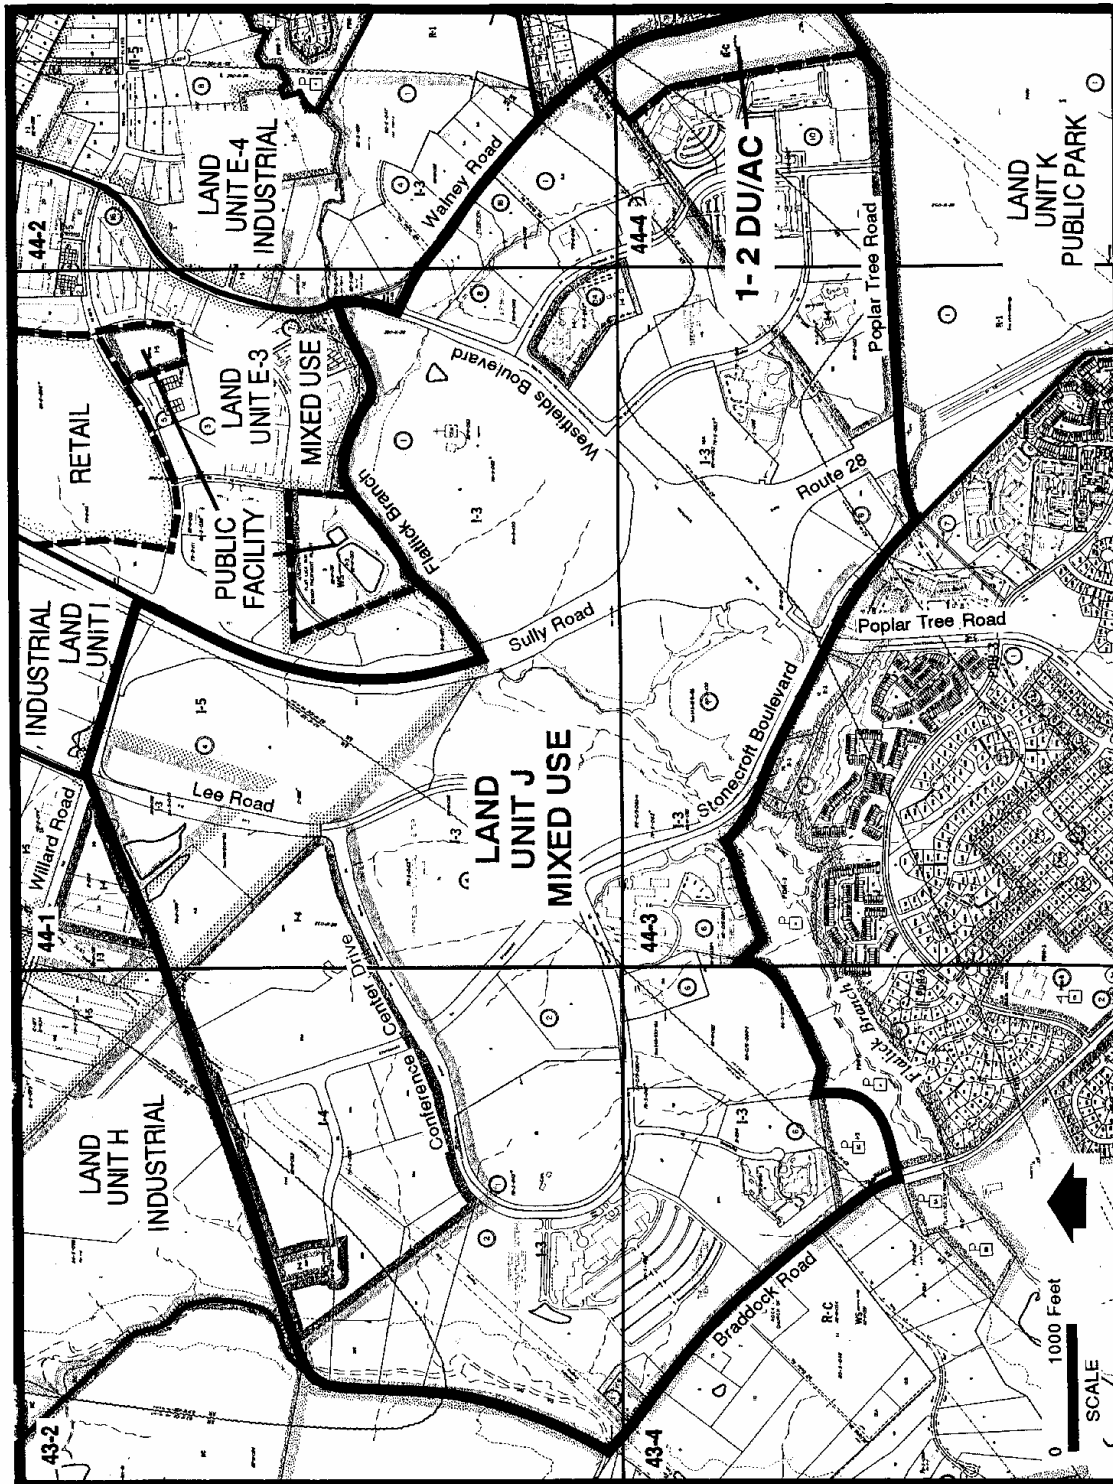

FIGURE 31

LAND UNIT J
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

- The quality of development should reinforce the showplace standards established by Westfields.

A limited amount of high-density residential development may be appropriate for incorporation within this mixed use focal point under either option under the following conditions:

- A mechanism is established by the County to permit residential development within the Tax District or the Tax District is amended to allow for the taxing of residential development without increasing the financial burden on other Tax District landowners or the County without their consent.
- Residential development should be consistent with the County's adopted policies regarding residential development in areas impacted by noise from Dulles Airport.
- Residential development should be limited to mid-rise or high-rise buildings with a sufficient number of units to ensure a high-quality living environment with active recreation and other site amenities provided so as to avoid the creation of an isolated pocket of residential use within this area that is planned predominantly for non-residential uses.

Option A

A higher-intensity mixed use focal point may be appropriate within Land Unit J, including such uses as office, retail, and a hotel up to a maximum 1.0 FAR. The development should be designed to be transit friendly and to be served by public transit. This mixed use development should complement the higher intensity mixed use development planned in Centreville and in the Dulles Suburban Center Core (Land Unit A). The focal point development should be located between Route 28 and Stonecroft Boulevard astride Westfields Boulevard and limited to up to 50 acres in area and should not exceed 1 million square feet in gross floor area. The additional intensity (above .50 FAR) should be permanently transferred from within Land Unit J.

Option B

Should a transit stop/station be programmed and located within the vicinity of the intersection of Westfields and Stonecroft Boulevards, but not in the median of Route 28, then higher intensity may be appropriate as follows:

- Additional intensity over .50 FAR should be permanently transferred from within Land Unit J or from land already zoned for commercial or industrial development and located in areas between transit nodes in the Route 28 Tax District where decreased intensity is planned.
- Within a radius of approximately one-quarter mile of the transit stop/station site and within the Tax District boundary, a baseline intensity of 1.5 FAR is appropriate. Transition to lower intensities should commence within this area to ensure compatibility with adjacent uses.
- If higher densities permitted by transit can occur on both sides of Route 28, the higher densities on the side of Route 28 other than that of the transit stop/station can occur only if it is phased with integrated pedestrian access or integrated van/bus service between the development and the transit station.

- Residential uses should be permitted and encouraged as part of the mix of uses as added intensity at an overall FAR of 2.25.
3. A substantial undeveloped buffer of not less than 250 feet in width should be maintained between Braddock Road and Westfields. This buffer is intended to provide the transition between residential development south of Braddock Road and Westfields non-residential development north of Braddock Road. The following conditions should be maintained:
- This buffer should consist of existing and supplemental vegetation and land forms;
 - No development or parking is appropriate in this buffer area;
 - The areas adjacent to trails and ponds should be considered to allow amenities for use by employees and residents;
 - No road access to the non-residential development should be cut through this buffer to Braddock Road; and
 - The siting and height of non-residential development should not create a negative visual impact on existing or future residential communities. However, height increases should be considered in order to preserve green space when there will be no adverse visual impact on existing communities.
4. Adjacent to Sully Station Shopping Center, are Parcels 44-3((6))21 and 21A. A hotel is already planned and approved for Parcel 21A. Parcel 21 is planned for a campus-style office and industrial park. As an option, Parcel 21 may be developed in neighborhood-serving retail and service uses, under the following conditions:
- The parcel is planned and designed comprehensively to function as an integrated development that is compatible with both the hotel and Sully Station Shopping Center;
 - The development has pedestrian access to the hotel; and
 - Access is from Stonecroft Boulevard.
5. Parcel 44-2((1))6A is planned for office, industrial/flex, and industrial use at a maximum intensity of .35 FAR, to be consistent with existing development to the north and west and to provide a transition to the residential development on the east side of Walney Road. There should be no direct access from this parcel across Parcel 44-4((10))26.

As an option, residential use at 5-8 dwelling units per acre may be appropriate under the following conditions:

- A mechanism is established by the County to permit residential development within the Tax District or the Tax District is amended to allow for the taxing of residential development without increasing the financial burden on other Tax District landowners or the County without their consent;
- There should be no direct access from this parcel across Parcel 44-4((10))26;
- Residential development should be consistent with the County's adopted policies regarding residential development in areas impacted by noise from Dulles Airport; and

- Residential development should comprise a sufficient number of units to ensure a high-quality living environment with active recreation and other site amenities provided so as to avoid the creation of an isolated pocket of residential use within this area that is planned predominantly for non-residential uses.
6. Re-use of the existing house on Parcel 44-1((1))6 as a restaurant or pub is desirable. Minor structural changes to the building would be appropriate as long as the integrity of the building is retained.

Transportation

1. Rail transit should be considered along Route 28 and other alternative routes in the land unit.
2. If future studies determine that right-of-way is needed in Land Unit J to facilitate development of an integrated transit system for the Dulles Suburban Center, then the needed right-of-way should be provided through dedication, easements or other mechanisms, as appropriate.
3. If any future improvements to Poplar Tree Road on the east side of Route 28 are required, every effort should be made to protect E.C. Lawrence Park by obtaining any additional right-of-way (if needed) from the north side of Poplar Tree Road and minimizing impact on the parkland, to the extent possible.

Parks and Recreation

1. The Fairfax County Park Authority should cooperate with Westfields officials to provide active recreation facilities, especially athletic fields, to serve employee and local community needs.
2. Cub Run Stream Valley Park is located on the western boundary of this land unit. Portions of this EQC contain sensitive resource areas; however, development of the stream valley trail and other amenities such as wildlife observation, seating and open play areas within the outer perimeter of the EQC will enhance the passive recreation value of this natural resource.
3. Flatlick Stream Valley Park borders this land unit on the south. The 10-acre park site located adjacent to Braddock Road outside the floodplain is suitable for the development of active recreation facilities.

Greenways/Trails

Stream Valley Recreational Trails: Complete the Cub Run Stream Valley Trail through this land unit to connect with Flatlick Stream Valley Park. Completion of the Flatlick Stream Valley Trail through Westfields by means of a public access trail easement is desirable to connect with the recommended trail through Land Unit E-4.

Countywide Greenways/Trails: Internal trails within Westfields are an integral part of the Dulles Greenway and should provide continuity of access between the Cub Run, Flatlick Branch EQCs, and Ellanor C. Lawrence Park. A pedestrian/bicycle access across Route 28 to Ellanor C. Lawrence Park should be considered as part of the Phase II transportation improvements.

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian or bicycle classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

LAND UNIT K

CHARACTER

Land Unit K is comprised in its entirety of Ellanor C. Lawrence Park, a 611-acre site owned and managed by the Fairfax County Park Authority and classified as a Countywide Multiple Resources Park. Land for the park was donated by private citizens in the 1960s (Figure 32).

Under the terms of the Lawrence agreement, the property is irrevocably designated to the Fairfax County Park Authority. This agreement further stipulates the FCPA is bound to contest any eminent domain taking proceeding "in every fashion reasonably possible" and, under threat of forfeiture, constrains the FCPA in relinquishing any portion of the park property for any purpose other than as a public park.

The second largest single site in the FCPA system, the park contains a rich diversity of natural and heritage resources as well as active recreation facilities. Varied habitats including the Rocky Run stream valley, ponds, meadows, pine and oak forests support a large wildlife population. Deer, turkey, hawks, owls and songbirds inhabit the park and the spring wildflowers along Rocky Run are an annual attraction.

Nearly 70 archaeological sites have been recorded, documenting over 8000 years of human habitation on this site. Major historic resources include the Walney Visitor Center, a renovated 200-year-old farmhouse which serves as the primary point of visitor contact; Cabell's Mill, a renovated 19th century gristmill which is available for rental; and Middlegate, the Lawrence home which currently houses administrative offices.

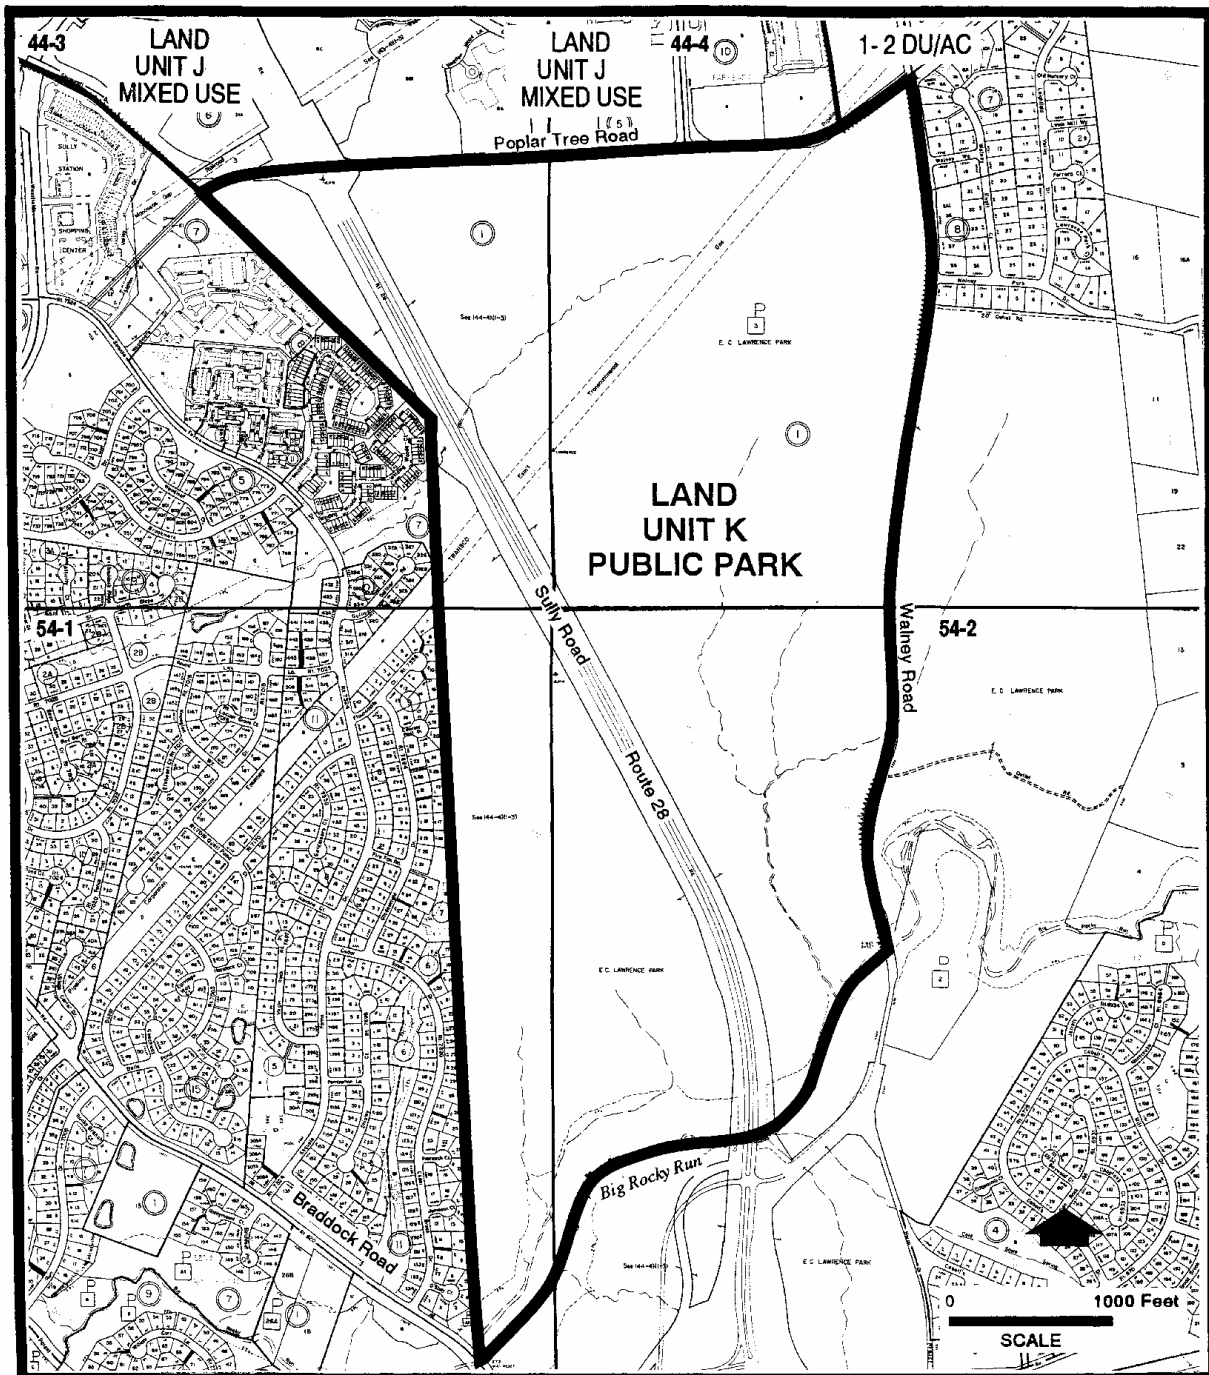

Over 60 percent of the property is being administered as Managed Conservation Areas to protect and enhance significant ecological and cultural resources. The portion of the park located west of Route 28 is being developed with a complex of six athletic fields.

Public use of the park has been increasing at the rate of approximately 20 percent annually. Over 35,000 visitor contacts were made in 1991, through participants in interpretive programs, Visitor Center activities and attendees at some 100 private functions at Cabell's Mill. These figures do not include participants in organized sports or informal users of the park trails. Negative aspects of this increased usage include increased incidents of poaching and increased levels of vehicular traffic through the park.

RECOMMENDATIONS

Parks and Recreation

1. Ensure that sensitive ecological and heritage resource areas of the park are buffered by compatible adjacent land uses.
2. Complete Resource Management Plans to protect and enhance significant ecological and heritage resources.
3. Provide trail linkages to the Dulles Greenway System and adjacent residential communities; consideration should be given to providing pedestrian/bicycle access across Route 28 as part of Phase II transportation improvements.

LAND UNIT K
LOCATION AND COMPREHENSIVE PLAN MAP DESIGNATION

FIGURE 32

Transportation

Walney Road should be closed to non-park traffic in two phases: (1) as soon as possible, restrict through truck traffic; (2) in the long run, implement procedures for public road abandonment between the Visitor Center and Cabell's Mill/Middlegate when adequate access from Cabell's Mill subdivision to Stringfellow Road is completed.

Greenways/Trails

Trails planned for this land unit are delineated on Figure 10 and are an integral part of the overall County system. While some of the segments have already been constructed, the map portrays the ultimate system for the land unit. In addition, the map specifies either a pedestrian, bicycle or equestrian classification for each segment, which represents the desired ultimate function of that trail. For new trails, specific construction requirements are detailed in the Public Facilities Manual.

I. DESIGN GUIDELINES FOR DULLES SUBURBAN CENTER

Objective: The design guidelines are intended to facilitate the integration of new development with existing and future development, to ensure that the various land uses function well together from the point of view of the user, thus contributing to the overall positive image of the Suburban Center as a high quality area to live, work, shop or visit.

SITE PLANNING

General

- Provide buffers and screening where necessary to protect adjacent neighborhoods or other less intense uses, recognizing that preservation of natural beauty in transitional areas enhances the visual quality of the development.
- Where feasible, minimize areas of impervious surface through shared parking, decked or structured parking; or increased building height; or other measures as appropriate.
- Plan development to ensure substantial usable open space.
- Minimize the disturbance of environmental resources and topography, by integrating existing vegetation, trees and topography into site design.
- Preserve or recover and record significant heritage resources, integrating them into site design where feasible.
- Separate auto and truck traffic on site for light industrial development, providing separate truck parking, loading and vehicle maintenance areas. For plants with large truck traffic volumes, provide vehicle entrances and exits separate from those for visitors.
- Design retail shopping development in physically unified complexes, not as scattered free-standing structures.
- Design safe separate pedestrian and vehicular circulation patterns for retail development, to encourage shoppers to walk from store to store.
- Limit access to arterial roads from retail development, relying on service roads or access to secondary roads that have access to arterials.

Transit Access

- Provide pedestrians, including those with disabilities, with safe and convenient access between bus stops and building entrances, using the shortest route possible.
- Provide bus shelters that protect patrons from the weather, and that are safe, easy to maintain, and relatively vandal-proof.
- Plan transportation facilities, such as bus pullouts, in the initial design of the road network. Design roads to accommodate heavy-weight and large-vehicle requirements.

Vehicular and Pedestrian Access

- Provide separate auto and pedestrian circulation systems for a safe environment that encourages walking rather than auto use for short trips.
- Design safe pedestrian crossings at roads with good lighting and access elements such as ramps for persons with disabilities.
- Provide pedestrian links to adjacent development and to the regional and countywide trail systems, connecting local sites with the larger community and enhancing the continuity of the larger systems.
- Use a hierarchical system of internal drives and roadways; do not access parking directly onto major arterial roads.
- Encourage bicycle use with bicycle routes and secure convenient bicycle storage for use by commuters, recreational users, and people cycling to the local shopping center.

Parking and Loading Areas

- Encourage parking in either structures, decks or well-screened, off-street parking areas on the sides or at the back of buildings. If it is not possible to accommodate parking behind or beside buildings, minimize parking in front of buildings.
- Locate priority parking spaces for carpools and vanpools close to the employee entrance of the building or parking structure, to encourage ride-sharing.
- Integrate the design of parking structures with that for the buildings served. Landscape both on the parking structure and adjacent to it, to make the structure more attractive.
- Design Park and Ride Lots to be compatible with adjacent development and cause as little disruption as possible to the surrounding natural setting. Trees and other vegetation should be preserved as screening.
- Segregate service, maintenance and loading zones from employee and visitor vehicle parking areas.
- Screen parking lots to control the view from the street right-of-way, adjacent development, and buildings being served by the lot. Use plant materials, walls, fences or earth berms. Break up large parking lots into smaller lots by using planting areas as dividers.
- Locate or screen the lights within parking lots to minimize glare on adjacent buildings or residential areas.

Open Space/Environmental and Heritage Resources Protection

- Provide for a continuous open space system linking activity nodes internally and externally. Use natural environmental areas as transitions between developments, as visual amenities, passive recreation corridors, and as wildlife corridors.

- Increase the benefit from stormwater detention facilities by designing them as open space amenities, i.e., small parks with landscaping and seating and/or picnic areas.
- Use grass swales for surface drainage whenever possible rather than channelization.

Buffers and Screening

- Use natural landscape to create edges and provide buffering to help define development.
- Utilize architectural and landscape elements (such as walls, berms, trees, varying scales and building masses, etc.) as visual buffers between commercial and non-commercial uses, as well as to mitigate impacts of highway noise.
- Screen from public view rooftop mechanical equipment, materials storage, utility substations and the like.
- Mitigate the impact of blank walls on the side and back of retail buildings with landscaping, screening and buffering. Avoid long expanses of blank walls along major roads, when feasible.

Utility/Service Areas

- Place utilities underground to the extent possible. Keep utility corridors separate from landscaping corridors to avoid disturbing vegetation during utility maintenance.
- Provide for safe and well-screened on-site storage of refuse generated by commercial and industrial uses, including walled enclosures for dumpsters. Design recycling facilities to be accessible but well-screened.

ARCHITECTURAL DESIGN

Scale/Mass/Form/Facades

- When development is near existing residential areas, provide general consistency of scale and mass between residential and non-residential development.
- Establish an architectural theme for multi-building complexes, utilizing similar materials and relating building elements such as entries, windows, and roof lines.
- Incorporate plazas at major building entrances or in the center of a group of buildings. Such plazas could feature special paving, seating, planting, water features such as fountains, and public art.

STREETSCAPE

Landscaping

- Provide a well-landscaped, high-quality image both toward the street and on any facade that can be seen from adjacent buildings or side streets.

- Provide color, texture and seasonal visual interest at major architectural and site focal points by using flowers and ornamental, deciduous and evergreen shrubs, trees, etc.
- Preserve existing high quality vegetation and integrate it with development to the greatest possible extent. Restore disturbed natural areas to be a visually appealing landscape.
- Select low-maintenance landscape materials for areas not likely to receive consistent maintenance.

Signage/Street Furniture

- Create a signage style for a given development complex and carry it out consistently at major roads entering the complex and at building site entries. Comprehensive sign systems that establish a distinctive theme and identity and eliminate visual clutter are desirable. Building-mounted signs and ground-mounted shopping center signs incorporated within a planting strip are encouraged. Freestanding and pole-mounted signs are discouraged.
- At major intersections, place street signs on mast arms overhead.
- Provide street furniture including utilitarian items such as benches, trash receptacles, and planters. Street furniture should be durable, require low maintenance, and be easily repaired or replaced.
- Use benches or other seating in courtyards, along pathways, near building entries, or in any other public area. Seating should be located so as not to impede pedestrian traffic.
- Place trash receptacles conveniently and strategically along major walkways, near building entrances, and in seating areas. Locate receptacles so as not to impede pedestrian traffic.
- Within the Sully Historic District all signs, fences, street furniture, outdoor graphics should be designed and installed to be compatible with the Sully Historic Site in terms of mass, scale, color and visual impact.

Lighting

- Develop a comprehensive lighting plan for a given development complex, in order to provide unity and a coordinated appearance, thus contributing to a positive sense of orientation and identity for motorists and pedestrians.
- Provide exterior lighting that enhances nighttime safety and circulation, as well as highlighting special features to act as landmarks for motorists.
- Design lighting in a manner that minimizes glare onto adjacent sites.

II. DESIGN GUIDELINES FOR THE SUBURBAN CENTER CORE IN LAND UNIT A

In addition to the design guidelines that are applicable to the entire Dulles Suburban Center, the following objectives and guidelines are specifically applicable in the core in Land Unit A. This core area ultimately will have the highest development intensities in the Suburban Center, as well as a future transit focus.

DESIGN OBJECTIVES FOR THE CORE:

1. Create a clearly recognizable identity that relates to Land Unit A's function as the urban core for the Dulles Suburban Center; define the area as a whole, as well as areas of special character.
2. Reinforce the order and legibility of the Core's circulation systems, to create a sense of place and allow people to move around easily within it.
3. Create a visually appealing environment where people can conduct their business efficiently and safely, so that the Core attracts a high level of activity, preferably both day and night.

GENERAL SITE PLANNING

- Create an urban development pattern by bringing buildings close to each other and to the road.
- Create a street-level mix of support service and retail uses that is visually attractive, and which will focus services for pedestrian convenience. The concept should encourage pedestrian activities and contribute to the vitality of the area.
- Create a comprehensive and well-marked system of safe and attractive sidewalks/trails that link adjoining buildings, plazas, shops, urban parks, greenways and recreation facilities.
- Incorporate parking into structures, either above- or underground, limiting surface parking only to small visitor lots, if necessary.
- Develop the area adjacent to any future transit station to take maximum advantage of the pedestrian access directly from the station to the workplace. The area adjacent to the transit station should be attractive and inviting to commuters, with clear signage to make movement easy and convenient between the station, the workplace and the retail facilities.
- Integrate support services in retail establishments, on the routes commonly taken by transit users, in order to capture those shopping trips on the way to and from the office.
- Incorporate urban parks, large or small, within convenient walking distance of office buildings, in order to provide open space as a readily accessible amenity.
- Encourage shared parking between uses with different parking needs such as hotels and offices, to use valuable land more efficiently and to reduce the amount of impervious surface.

- Build public spaces such as pavilions, plazas, and terraces for seasonal celebrations, fairs and other community events, thus adding important vitality and evening activity.
- Integrate parking decks and structures into the overall landscape to create a pleasing visual image. Perimeter plantings and spandrel planters on the decks/structures are encouraged to lend a softening effect to facades and add visual variety.

IDENTITY: CREATING A SENSE OF PLACE

- Reinforce the identity of the Core by developing a streetscape plan to be used on all public roads within the core. This could include consistent use of street trees species and styles of street furniture such as light fixtures, as well as special paving treatments at crosswalks.
- Enhance the identity and legibility of the Core by developing a comprehensive signage plan that identifies both entries to the Core from major roads, as well as street entries to building complexes, parks, trails, etc. This signage should include consistent sign colors, lettering and shapes, and perhaps a logo for the Core, to alert users that they are in a special area.
- Define the special character of smaller areas within the Core by using landmarks such as distinctive public art or focal points such as a public plaza.
- Define the Core at its major entry points, using landscaping, walls, berms, and other methods create gateways and edges to the Core.
